WALLACES' FARMER AND Iowa Homestead

Good Farming *Clear Thinking* *Right Living*

Will Wet Corn Hit Market?

"WHAT will we do with the high moisture corn?" Farmers were asking that question the first days of November, as they began to try husking. They are still asking it as they break into new fields now. Corn is uneven and wetter than expected.

Some corn, however, is in fair shape for cribbing. Tom Moates, AAA fieldman from Montgomery county, said corn was fairly dry in southwest Iowa. "But farmers will have to do something about wet corn farther east in southern Iowa," Moats declared.

In northeast Iowa, Walter Hagen, Allamakee county, said the cold summer and the September 30 freeze reduced the feeding value of the corn. "There won't be an ear left for next summer's feeding," he said. "In another month, hogs will be moving to market without proper finish. Corn will be gone."

High moisture corn is bothering farmers in central Iowa. In Hamilton county, William Yungclas started husking and quit. Even with a man sorting at the elevator, he thought the corn too wet to pile rapidly.

Corn conditions are bad to good in western and northwestern Iowa. Ray Marsh, Cherokee county, said corn had from 20 to 47 per cent moisture in northwest Iowa in early November. "It's spotty, tho," he said; "some is soft and some dry in the same field, or even in the same hill of corn." Marsh is an AAA fieldman.

Over the northern corn belt, corn probably has the highest moisture content ever known at this time of year. October tests in Iowa, made by the Weather Bureau, and covering all counties, showed an average of 40 per cent moisture. That's almost 7 per cent above the previous high, which was 33.4 last year in October.

From 20 to 30 per cent of the corn will need lots of dry weather to make it safe to crib. In the bad fields, ears are spongy and twist in two easily. Kernels are soft and cobs wet and soggy. Some kernels have sprouted on the ear.

Corn in South Dakota and Nebraska, however, is reported in better shape than in Iowa. But Minnesota has a high percentage of unmarketable corn.

What do farmers plan to do with the wet corn? What effect will their methods of handling this corn have on markets? How will hog and cattle feeders be affected?

Ventilators are being installed in many cribs. A few are installing corn driers, using heat and forced air. These will help. But much corn is too wet for ordinary ventilators to do the job. There are not enough driers.

So farmers are thinking of more drastic methods for saving the crop. Across line fences, at sale barns, at implement stores, and at grain elevators, handling wet corn is the subject discussed. (Continued on page 39)

Sorting Corn as it goes in the crib on the William Yungclas farm in Hamilton county, Iowa. Two sons do the work. Tom throws out the bad ears at the conveyor and Don holds the corn back so a good job of sorting can be done.

Field Drying of wet corn is recommended by some farmers. In this picture, Richard Fisher, Polk county, Iowa, is shown husking corn last March 1. Some farmers report husking corn as late as April last spring, and it graded No. 2.

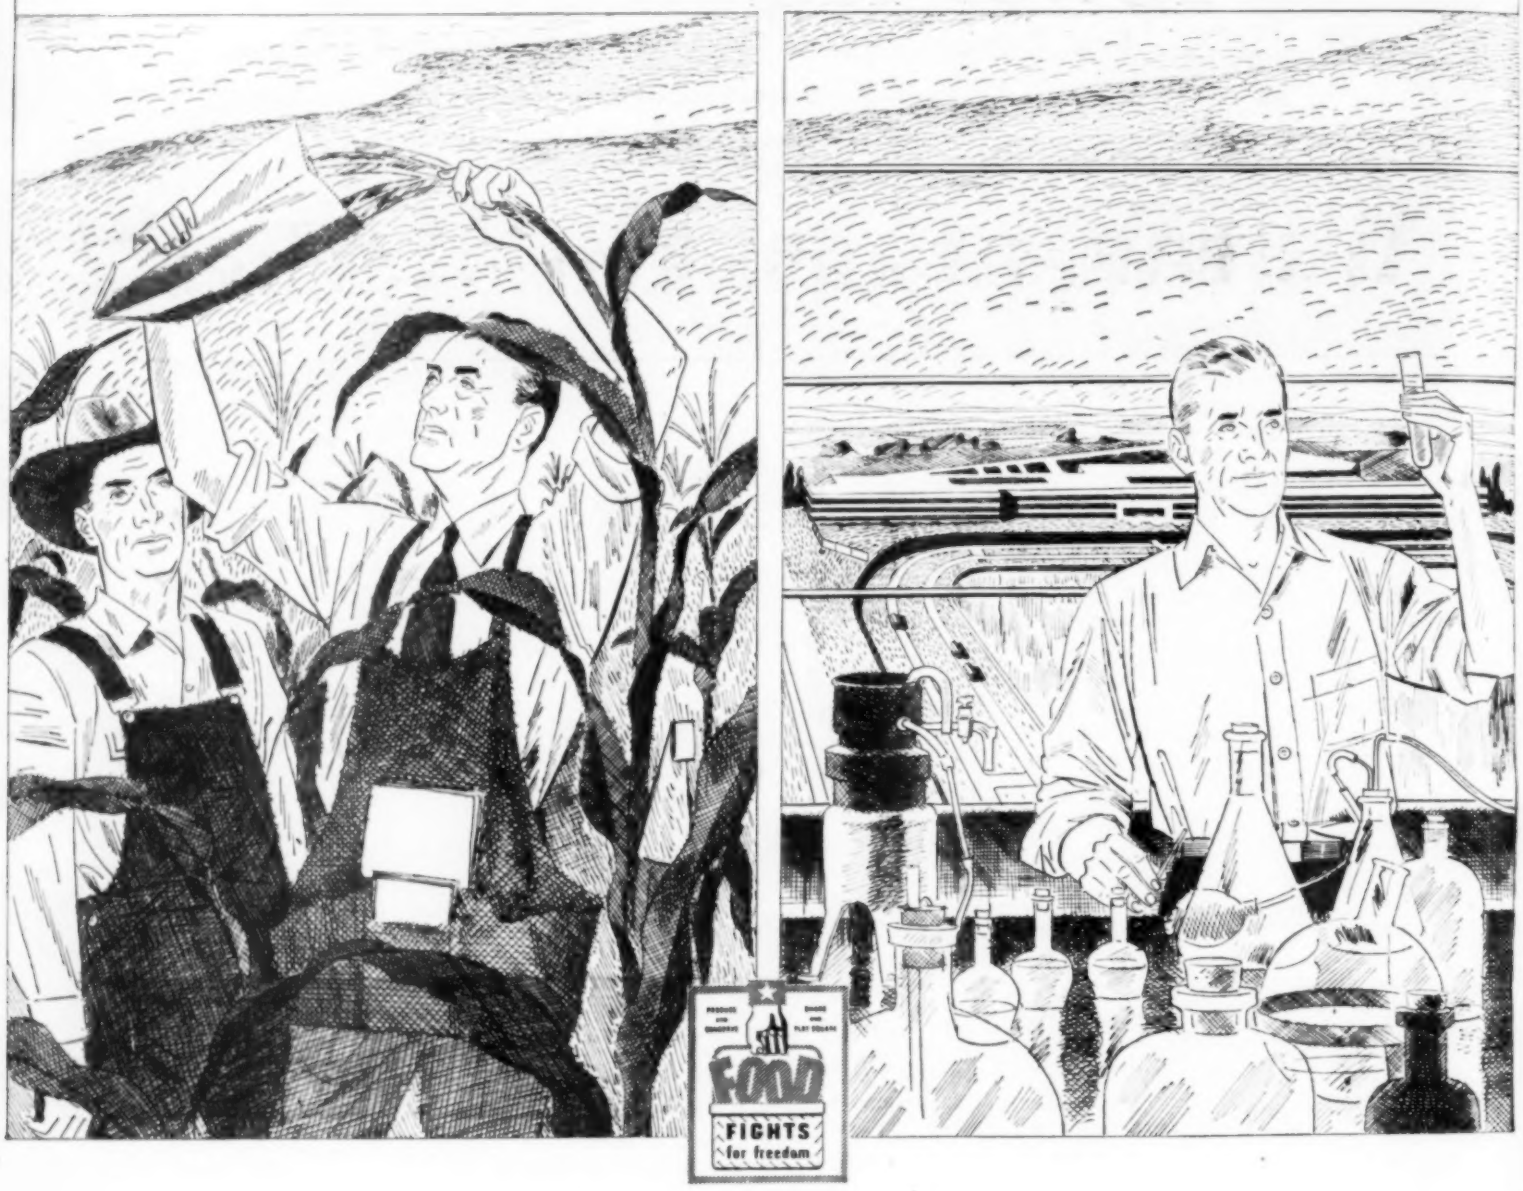
IOWA'S LEADING FARM NEWSPAPER

Research Makes Markets—and Jobs!



No one knows the tremendous practical value of scientific research any better than the American farmer.

Through his county agent, his state agricultural college and various government services, he is constantly in touch with the findings of research in soil chemistry, crop production and animal husbandry.

And time and again this research has guided him not only to improved methods but also to the production of new crops—and new uses for old crops—*opening new and expanded markets and greater rewards for his labors.*

Today, thanks to scientific research, many a crop is bigger or better; such comparatively new crops as the soybean have risen to great importance; and such modern developments as the manufacture of plastics and synthetic textiles have provided new markets for farm produce—even for huge volumes of farm-grown materials formerly considered useless.

Yes, the farmer knows good and well how important research is.

So does the manufacturer.

In fact, manufacturers today rely to a major degree on research to improve the quality or reduce the costs of their products and to create *new products.* That is the kind of progress which results in greater opportunities to serve human needs and desires. And that is what makes jobs.

In short, research is the great "job-maker."

With *all* the benefits of research in mind—but especially in the knowledge that research creates jobs—General Motors has recently announced its plans for a great new Technical Center, providing outstanding facilities for research in science, engineering and functional design.

Through the GM Technical Center, General Motors hopes to play a greater part than ever before in the "partnership" of farming and manufacturing—a partnership serving the objectives to which General Motors is dedicated: *More and Better Things for More People!*

NECRO
KILLS PROFITS
Like an Atomic Bomb

HOGS LIKE THESE DON'T MAKE MONEY

Border Line NECRO May Be in Your Hog Lot, COMBAT this ENEMY with PROVEN MASTER LIQUID HOG MEDICINE

PIGS WITH BORDER-LINE NECRO WON'T FINISH OUT No matter how much feed you waste on pigs with border-line Necro, they just won't gain or return to normal, thrifty, up and coming animals. It takes more than feed to straighten these pigs out and put them back on the road to market. Many times the marketing of these pigs means the difference between loss and profit for the whole year's work. MASTER LIQUID HOG MEDICINE will help you put these animals right up where they belong—back on the road to market in just two weeks or your money will be returned in full. Yes sir, we take all the risk. If these pigs with border-line Necro don't snap right out of it, and once again become thrifty, profitable animals in just two weeks, MASTER LIQUID HOG MEDICINE will cost you nothing.

NECRO—THE PROFIT KILLER

Necro (Necrotic Enteritis) causes more loss of profits to hog raisers than all other diseases combined. The hog raisers' losses each year caused by Necro are as devastating as losses to property struck by an atomic bomb. The big loss from Necro does not come from those pigs that sicken and die quickly but from those pigs that have border-line Necro. These pigs are scurvy looking, gaunt, poor-doing, unthrifty and runty animals that eat and eat (consuming your expensive feed) yet they do not gain—they will not finish out. They are not down, but they are not up, they are neither sick nor well—just a total loss while they remain in this condition. Maybe you don't know it, but MASTER LIQUID HOG MEDICINE will put those pigs right back in the profit column in just two weeks or your money back.

MASTER LIQUID HOG MEDICINE IS CONCENTRATED A little MASTER LIQUID HOG MEDICINE goes a long way. This medicine is highly concentrated. Only one gallon is needed to treat 20 pigs with Necro or border-line Necro unless they are scouring. If scouring, one gallon of MASTER LIQUID HOG MEDICINE will still treat 10 to 12 head of pigs. Because MASTER LIQUID HOG MEDICINE is highly concentrated your cost per pig is low. MASTER LIQUID HOG MEDICINE is a product of steady development. Thousands and thousands of dollars have been spent in experimentation, research and laboratory work and many graduate chemists and veterinarians have contributed their combined knowledge to perfecting MASTER LIQUID HOG MEDICINE and making it the outstanding product that it is today. We have always believed that the hog raiser wants the best medicine obtainable with which to treat his animals when they are sick. This is the reason that no expense is spared in making MASTER LIQUID HOG MEDICINE. MASTER LIQUID HOG MEDICINE, like all Master Products, is made first for quality and not for price. We invite comparison of MASTER LIQUID HOG MEDICINE with any similar product on the market as to composition and results. Result for result, MASTER LIQUID HOG MEDICINE will surpass them all.

MANY CASES OF BORDER-LINE NECRO Most everyone has had pigs that look like those at the top of the page. Those pigs have border-line Necro. Thousands and thousands of pigs are lost each year because of Necro and many more thousands are left runty, poor doing, scurvy looking, unthrifty animals as a result of an attack of Necro in the herd or because they have only a light case of Necro (Border-line Necro). MASTER LIQUID HOG MEDICINE will not only help you to treat your animals when Necro strikes the herd, but it will also help you to treat those border-line cases, as well as helping those pigs who have been left runty, scurvy looking, unthrifty animals from an attack of Necro in the herd.

TREAT ALL YOUR PIGS The best way to treat border-line Necro and runty, unthrifty pigs is to treat the whole herd. This is the safest thing to do. If there has been a severe attack of Necro in the herd, or if some animals have border-line Necro, it is almost certain that other pigs in the herd have Necro in some degree which tends to hold them back. The MASTER LIQUID HOG MEDICINE treatment will help to finish your pigs faster and put them on the market as better class animals. You can treat just the pigs with Necro or border-line Necro, but we know from experience that in most cases it is better to treat the whole herd.

THE MASTER TREATMENT IS EASY AND CHEAP TO GIVE. You have no expensive feeds to buy when you use the MASTER-LIQUID HOG MEDICINE treatment. Simply mix your own home-grown grains with MASTER LIQUID HOG MEDICINE and feed nothing but this mixture for two weeks. At the end of the two weeks your pigs will be up and coming, thrifty, good looking, profitable pigs or we'll return your money.

WATCH OUT FOR SOFT CORN It is known by careful students of hog feeding that pigs and hogs sometimes develop Necro from eating soft corn. If there is any chance whatsoever of some soft corn getting into your feed, that is another reason why you should use MASTER LIQUID HOG MEDICINE. This medicine will prevent Necro even from soft corn.

You take no risk when you use MASTER LIQUID HOG MEDICINE, for if you are not satisfied with the results, we'll return to you every penny you paid for the medicine. No red tape. You must be satisfied. If your dealer can't supply you, order direct. One gallon for every 20 head if they are not scouring. If the animals are scouring, one gallon for every 10 to 12 head.

1 gallon	$3.75	3 gallons	$10.00
2 gallons	7.00	5 gallons	16.00
10 gallons	$30.00

250,000 FARMERS CAN'T BE WRONG!

● Can't think of anything we do on the farm that doesn't call for teamwork of one kind or another. My dad pointed that out to me, years ago. Showed me a good team of horses and explained why they were good—they pulled together. That way, they got more done and yet it was easier for both of 'em.

Same way with us farmers and the railroads. (I'll use the Burlington to make my point because we've been teaming up for a long time.) Over the years, they've spent a tidy sum of money and man-hours in tackling a lot of our problems with us. Soil and livestock improvement, better feeding and housing for livestock and poultry, control of diseases and pests—all these and a lot more.

Naturally, they're not doing all this just to be a "good guy." You see, it works out like this—the better we farmers get along, the more shipping the railroad gets. Just like that team of horses that got things done by pulling together—we're getting more done and yet it's a whole lot easier for both of us.

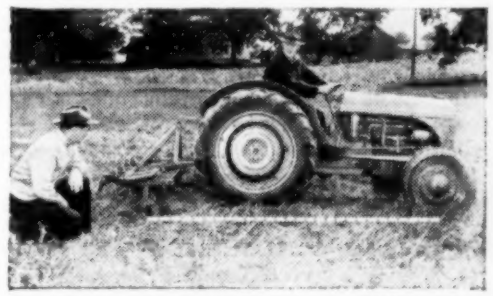
WALLACES' FARMER AND IOWA HOMESTEAD, November 17, 1945 (Volume 70, No. 22). Published first and third Saturdays of each month, by the James M. Pierce Corporation, Des Moines, Iowa. Subscription price, two years for One Dollar. Entered as second-class matter October 19, 1929, at the post office in Des Moines, Iowa, under the act of March 3, 1879. Copyright, 1945, by the James M. Pierce Corporation.

The FERGUSON SYSTEM turned the tractor into a Farming Machine

Three other important features

1. A row-crop and a 4-wheel tractor in one. Easy wheel spacing without changing the steering. An exclusive Ferguson System feature.

2. With the Ferguson System the implement is carried. Thus, heavy going adds traction. The tractor changes weight to suit the job.



3. Whether ground is even or uneven, the Ferguson System keeps the implement at constant depth, automatically. Result, evenly worked fields.

One of MANY advantages.. the FERGUSON SYSTEM automatically protects implements when striking an obstacle

An amazing feature of the Ferguson System is that when an implement catches on an obstruction you get instant, automatic protection . . . without "losing" the implement.

No other tractor can make this claim.

In the above photograph a boy is breaking sod, and one of his plows has caught on a rock. The Ferguson System has automatically and instantly released the weight of the plows and transferred some of the weight of the tractor from the rear wheels to the front wheels. Thus traction is lost, the rear wheels spin and no damage is done.

To resume plowing, he will simply back up a little, lift the plows with a touch of his finger tips, drive forward and lower the plows for work. The diagrams show these three easy steps. With the Ferguson System, there is no rehitching—to lose time, strain muscles, or skin knuckles.

The Ferguson System, with self-propelled, automatically-controlled implements, offers many other exclusive advantages. Three are shown in the photographs at the right. Let us demonstrate on your farm how these, and many more, can help you do better work . . . faster, and at lower cost.

By turning the tractor into a Farming Machine, the Ferguson System applies power to *all* of your work, and eliminates laborious lifting and adjusting of implements by hand.

Thus, the Ferguson System makes the whole business of farming easier and more profitable. It leaves strength and time to enjoy Better Living. Because it offers so many exclusive advantages, you surely will want to learn more about it.

"Forward Prices" on 1946 Hogs

"FORWARD pricing" is an expression that many of us have heard, but we're not all sure what it means. Now we have a good example at hand in the "forward price" on hogs in 1946-47.

The government promises a support price for hogs (good and choice butchers) at a season's average around $12, Chicago. This is a floor, not a ceiling. The actual price may be higher.

This gives a farmer a chance now to decide how many pigs he wants to raise in 1946, and whether that sort of guarantee will encourage him to increase or decrease production.

Such "forward pricing" gives a farmer a measure of security on future farm product prices that he has never had before in peacetime.

The government, of course, takes risks in figuring so far ahead. It must take these risks if the farmer is to be given the kind of protection involved in "forward pricing."

If the "forward price" is too low, farmers may not produce enough hogs, and the market price will go up higher than consumers like. If the "forward price" is too high, farmers may raise too many hogs, and the government may have a tough time buying up the surplus or providing compensatory payments to the hog raisers.

In spite of all the difficulties, "forward pricing" can help to stabilize price and production, and can make things better for both producer and consumer.

"Feast and famine" ups and downs in production and price will hit us less often if "forward pricing" does a good job.

How to Get Support Prices For Eggs

THE Iowa Farm Bureau Federation points out that eggs in Iowa are below support prices at some points now.

Support prices—close to the Steagall figures—are 24 cents for straight run and 27 cents for candled eggs.

And more trouble in eggs is coming—particularly if we don't get exports of dried eggs moving again.

If eggs aren't being held at support prices now, what will happen when the flood really comes?

Nobody wants to see eggs used for stock feed again. Nobody wants to fill storage space to bursting.

One answer is to get those European relief appropriations thru and move dried eggs. Another is to revive Food Stamps and move eggs into the domestic market.

To make sure that the farmer gets the support price, there is only one certain way: Let him sell his eggs on the market and get a receipt. If that receipt shows he received less than the support price, see that he gets a federal check for the difference.

Make Your Future Safer With Bonds

THIS is the last year of the war boom in farm income—unless all of the experts are wrong. And this is the month of the last Victory Bond drive. The two facts go together.

Put part of the profits of the last war boom year into Victory Bonds.

There's nothing like the feeling of safety that a handful of government bonds gives you in a year when crops are short, prices drop and things get tough.

A year like that will come again some time. Be prepared with a safety deposit box full of Victory Bonds.

Things That Will Help Dairymen

DAIRY farmers who want to check up on how good a job the dairy lobby is doing in Washington should note the following:

How hard is the dairy lobby working to get congress to expand appropriations for school milk and to provide funds to get Food Stamp plans started?

How hard is it working to secure appropriations for the relief of the hungry in Europe this winter, so that shipments of dried milk and condensed milk can be sent overseas in adequate volume?

How hard is it working to explain to consumers, as well as to congress, how much these things are needed?

SILENT GUNS

For the first few weeks after V-J Day, everybody woke up each morning with deep thankfulness and joy.

The guns were silent. Men weren't killing each other any more. Our boys—most of them—would be home soon.

Since then, the pressure of post-war worries has sometimes made us forget. But what is a strike compared with the casualty list at Okinawa?

What is a jangle at a London conference compared with the horror of Bataan, or of Kasserine Pass, or of the Battle of the Ardennes Bulge?

Post-war worries are real. Our problems are great. But our boys will be home to help with them. And our energies can now be devoted—not to killing people—but to clothing and feeding them.

Since the first Thanksgiving after the Civil war, the United States has never known one that should be so deeply felt as the Thanksgiving of 1945.

When You Pay All Your Feed Bill

IF YOU milk cows, will you miss the 17 cents (per pound of butterfat) feed subsidy when it is reduced next April and is taken away entirely next July?

Farmers with whom we've talked picture three possible outcomes when feed subsidies end.

1. The price to the consumer will rise by 10 cents or more, so that the price for butterfat in July—after the subsidy is over—would be around 65 cents.

2. Demand for butter will slack off, as a result of lower pay rolls and more butter, so that the price of butterfat would only be around 45 cents a pound.

3. Extra heavy production and low pay rolls might break butterfat prices below Steagall support limits — 90 per cent of parity — and force federal subsidies of some kind to keep butterfat prices up.

Few people worry much about the third possibility coming true this summer, particularly since federal subsidies in the form of foreign relief appropriations and school lunches will give dairy products some help.

Anyway, dairy farmers should get ready for the probability that the 17-cent payment in March may shrink gradually to 5 cents in June and to nothing in July.

Plenty of city jobs and good pay rolls will be the dairyman's biggest friend when the market sets his price again.

Peace Brings Starvation To Europe

FOLKS in northern Europe may not be sure who won the war, but they are pretty certain who lost it. Europe lost the war.

Ordinary people in Holland, France, Belgium, Britain, Denmark and Norway are going to eat worse this winter than during the war.

There will be starvation in some sections. Everywhere, there is likely to be weakness and discouragement from scanty rations.

And nobody even offers to help these folks. UNRRA tries to take care of part of the worst needs in the Balkans, in Italy, in Poland.

But the northern European nations will not be aided by UNRRA. They can't be helped by U. S. army supplies unless congress so directs.

The Dutch will have potatoes and bread, but no meats, no fats, little poultry. The French and Belgians are short of food. The Danes, better off for food, are short, too, on fuel.

In most countries there is only enough fuel to cook one meal a day. That heat gives the family one chance a day to get warm.

The British, on short rations thruout the war, have scantier rations now. Peace brought a cut in the slim meat ration, not an increase.

Lend-lease has stopped. UNRRA does not touch northern Europe. What are these folks to do?

Why don't they buy American food? Some nations have a little money left. They do buy, but the amount is small. They think the money —the dollar exchange — should be saved to spend for industrial equipment, for trucks, for locomotives, for things that will get their factories working again. They must have these things, or they'll be dependent on charity for a good many years.

Europe, in the next eight months before the 1946 harvest, runs the certainty of great losses in life and health because of food shortages. Riots are likely. The fragile post-war governments may crash and some states drop back into anarchy and internal war.

Americans don't like to see folks go hungry. But, in addition to these humane feelings, there are other reasons why we should act to aid northern Europe.

A new war could easily start from a Europe torn by famine-produced revolutions. Food could serve as insurance against war.

Furthermore, the United States has food to spare. We're now talking about risks of poultry and milk surpluses. Dried eggs and dried milk are foods that Europe needs worst.

Wallaces' Farmer and Iowa Homestead suggests that farm groups get busy to urge that congress make an appropriation of a billion dollars to buy the food we can spare and that northern Europe so badly needs.

Aid should be extended also to the American and British occupied parts of Germany, which are going to be worse off than any other area by spring. We aren't making war on hungry children.

We've spent hundreds of billions to kill our enemies and to win the war; let's spend another billion to try to keep people alive and to save the peace.

Let Bonds Send Children To College

ARE your eight-year-olds going to college ten years from now? If so, here's a good way to make a start on providing a fund for that college education for them.

Buy Victory Bonds that will mature in ten years. Two years at college will be mostly covered by $1,000. If you put $750 into bonds now, you'll have $1,000 in ten years.

Use war-time profits to insure your children a college education. And put that money into Victory Bonds!

Odds *and* Ends

CORN husking is going slower than any year most of us can remember. But the farmer who gets in the field late may have the least trouble with spoiled corn.

AN IOWA farm county was first over the line in the Victory Bond drive, and one of the first 12 in the nation. Audubon county has earned a special cheer from other farm communities.

DAIRYMEN who think butter prices are sure to rise are quite willing to have the feed subsidy removed. But what if butter prices hit a slump next spring?

AS USUAL, Iowa is planning to raise about one-fifth of the nation's spring pig crop in 1946. This means not quite as many sows as farrowed last spring. The way the corn dries out may change this estimate.

PREPARE for a cut in net farm income of 15 per cent in 1946. This is one estimate of the Bureau of Agricultural Economics. If pay rolls and industrial production fall off more than expected, the farm income decline would be much greater.

JOHN L. LEWIS doesn't like President Truman's recommendations for some moderate wage increases in line with the changes in living costs.

SCHOOL lunches, with federal aid, now are furnished about three million children in towns of 2,500 or less and in country districts. Only about half the school lunch aid goes to towns over 2,500.

FARMERS played safe on grain supplies this year, kept more in the crib and bin than usual. Stocks of corn on farms were 100 million bushels greater on October 1, 1945, than a year earlier. Oat supplies were 350 million bushels larger.

ONE subscriber asks why city wages should go up, when the hog floor is going down. Actually, the take-home pay of many city workers will decrease even with a 15 per cent raise in pay per hour.

IF THE support price is $12 for hogs at Chicago for the week of October 26, 1946, what does this mean at Iowa points? Present differentials indicate that Fort Dodge, Iowa, would be $11.50 and Marshalltown and Mason City, Iowa, $11.55.

HENRY WALLACE reports that his Department of Commerce economists find that a 10 per cent average wage increase "would mean a rise of 15 per cent or a little more in wages in the manufacturing industries. Some industries could afford more, some not so much."

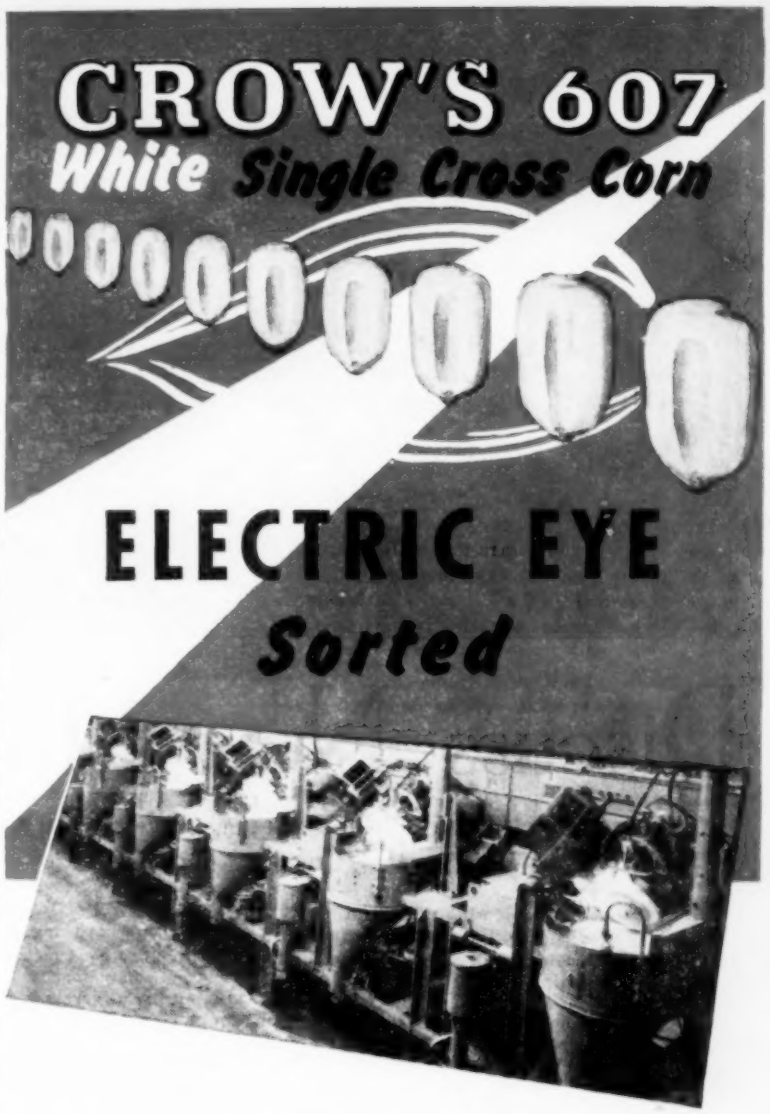
"NO government program is a satisfactory replacement for a high level of production and employment in non-agricultural lines. This is an essential for agricultural welfare for which there is no substitute."—O. B. Jesness, University of Minnesota.

IF YOU have trouble finding tires, farm machinery, etc., to buy these days, take the money and put it into Victory Bonds. It will earn interest while you are waiting for more goods to come back on the market.

Song of the Lazy Farmer

I LIKE that old-time farmin' wheeze—"no food for man without the bees"—because it gives a rural fact which many text-books often lacked. You might invest in costly bull and think it gave your herd a pull for records high and plenty beef, and yet your scheme would come to grief unless the blossoms of the plants made seed the grass crops to enhance. For nothing in the livestock line could long survive a quick decline in pastures, meadows and legumes where bees are busy on the blooms. And most of our old orchard fruit is set by that same buzzing route, and it would leave our storehouse bare without the bees to busy there. The little bee is nature's link betwixt mankind and plants, I think.

Most honey men are gentle guys who handle bees with methods wise and hafta know a lot of lore and keep on learnin' more and more. I never had the patience quite to wear a hood and smoke 'em right, and all their knowledge startles me, it's almost super-duper, see? But I've got all the sense it takes to spread sweet honey on my cakes, a-knowin' that the buckwheat flour could never be without the power them insects has to fertilize while huntin' nectar busywise. And how I love to take a nap a-sittin' in old nature's lap beneath the bloomin' apple boughs and hear them honey bees carouse. I'd almost stand and let 'em sting before I'd lose them bees, by jing!



Newest Development Introduced by CROW'S

Electronic seed sorters — or electric eyes — inspect every kernel of CROW'S White Corn before it goes to the customer. This is a new system—introduced

Exclusively for CROW'S Hybrids—

a sensational improvement over old methods of sorting white corn. It eliminates the possibility for human error—gives the customer white seed corn 100 per cent white. All kernels pass one by one through a beam of light. Kernels with even a slight tinge of yellow—or imperfection—are automatically discarded. Only perfect white seeds go through for shipment to customers.

Better Seed for Premium Corn

White corn usually commands a premium price above the best yellow varieties. It pays to grow white corn for market. Corn millers eagerly buy all the white corn that farmers have to sell each year. CROW'S Electric Eye Seed Sorters insure your getting white seed corn that is PURE WHITE. EVERY seed in the bag is individually inspected for color or blemish. Only perfect white seeds are bagged for shipment. This elimination of imperfect seeds means a higher percentage of germination in the field—better stands—higher yields—more profits for you.

CROW'S Hybrids include white and yellow single and double crosses—each bred to fit your needs in maturity, soil fertility or feeding requirements. See the CROW dealer in your community. Send for CROW'S FREE CATALOG.

Public Library

Eat, Sleep and get fat is what hogs do on the Clark Lackore farm, Hancock county, Iowa. Not so many next spring, 'says Lackore—"No corn." Some farmers are looking at the new price floors and cutting number of brood sows to be kept. Will there be a 10 per cent cut in spring pigs?

Discuss New Hog Floors

Some Hog Men Say, "About Right"; Others Say, "Too Low." May Cut Sow Numbers

SOW breeding time for spring pigs is here. For March farrowing, sows are already being bred. About December 10, breeding for the April pigs will begin.

This time, the hog raiser knows what the support prices will be before most of the sows are bred. He also knows that supports will be graduated, with December the low month. Here are the hog price floors, based on the Chicago market:

Farmers are promised $13 for good and choice hogs until October 1, 1946. Then the floor goes down 25 cents a week, to $10.75 in December. Then up gradually to $13.25, in September, 1947.

The average for the year will be $12 per cwt. at Chicago. There is no announcement of any change in the $14.85 hog price ceiling, also based on Chicago.

"Are price supports for hogs announced by the Food Administration too low, too high, or about right?"

Eighty-five hog raisers, from all sections of Iowa, were asked that question by Wallaces' Farmer and Iowa Homestead. The hog raisers queried are known as good operators. They keep from 10 to 48 sows for spring pigs each year, with an average of 20. Let them answer:

The new support prices are "too low," say 39 per cent of the replies. "About right," say 61 per cent. No hog raisers say the new support prices are too high.

Those who say support prices are too low are looking at the prices the farmers may have to pay for things they must buy. Says Carl T. Anderson, Washington county: "With the rising price of labor, the prices of commodities will rise, and then the hog support price will be too low."

Donald Cantonwine, Benton county, asks: "Why should our prices go down as other branches of business keep on soaring?"

Feed prices are cited by Ted Dykhouse, of Clay county, in support of the "too low" side. He says: "I feel certain corn prices will stay at the ceiling and protein at around $80 per ton. The man putting his hogs on the $10.75 market certainly can't show any profit. He probably would lose."

Those who think the new support prices are about right seem to be looking quite a ways ahead. Clarence Olson, Humboldt county, says:

"I believe hog production is not going to be too high, as the average farmer is not going to feed $12 hogs with corn staying around $1. The good hog raiser, with some good luck and lots of labor and equipment, is going to do O. K. by the new prices, in my estimation."

Still, Olson says he thinks the new prices about right. Is he looking to the lower production, brought about by hog prices $1 lower, as a necessary move for the benefit of hog raisers in the long run?

Evidently, that is in the thinking of George M. Fox, of Dallas county. He thinks the new prices about right, and writes as follows:

"The present support price has increased the number of hogs, and will continue to do so. With the war over, we should begin to think about making hogs cheaper, so as to let living costs come down gradually.

"The price now is too high to be continuous. We can't expect to keep war prices too long." Fox declares. Then he adds a grim reminder of what happened to hog raisers once: "I am in favor of the $15 ceiling. But don't let hogs slump to $2.50 per cwt. That will pull the house down on all of us."

"Will the new floor prices increase or decrease hog production?"

The 85 hog raisers were asked how many sows they kept last year and how many sows they now expect to keep for spring pigs.

The answers show almost a 10 per cent reduction in the number of sows to be kept for next spring litters. But several of those reducing the number of sows gave poor health of the farm operator, or inability to get corn, as the reason.

However, this survey does not cover a cross-section including all hog men. These are expert hog raisers. No in-and-outers are included. Therefore, the result is not an indication of the size of next year's hog crop.

It would seem likely that if these good hog men were cutting sows 10 per cent, the average hog man would make a larger cut. Such men are less able to make a profit when the margin between hogs and corn is narrow.

"Will hog prices be above the floors, anyway, so that lower support prices won't make any difference?" This question was put up to the hog men, with answers as follows:

Hogs will be above the floors, said 79 per cent. They'll be pressing on the floors, said 42 per cent. Floors will be needed part of the time, 6 per cent. No opinion was held by 13 per cent.

Some hog raisers think the price graduation is too much, and may produce another hog glut. Here's what J. M. Steddom, Polk county, says:

"Marketing of hogs could be spread more evenly thru the year, with a much smaller spread than $2.25 per cwt. It's possible to have a severe hog glut in September, 1946."

Ross Spencer, Woodbury county hog raiser, agrees that price changes may make a hog glut. He says: "If the majority of hog producers have their pigs farrowed to hit the high months, won't we run into marketing difficulties?"

There is support for the graduated floor price, however. Ben Petersen, of Mahaska county, says: "A graduated support price like the one announced for next year is what we should have had from the very beginning of ceilings and supports.

Petersen thinks graduated floors would have prevented the hog market glut of two years ago and the scarcity which followed last year. He sees another glut of both pork and beef this coming winter and spring, caused by soft corn and present price ceilings.

Some think ceiling prices should be graduated, too. R. G. Johnson, of Franklin county, says: "A graduated floor should, in my opinion, be accompanied by a graduated ceiling, the top ceiling 75 cents above the present one."

He reasons this way: "As it stands now, the producer of top quality hogs—coming to market when the supply is lightest, in September—gets no premium over the man sending culls to market. It is a well-known fact that February and March pigs are costlier to produce."

"Will graduated floors cause a shift in farrowing months?" The poll indicates some farmers will shift their breeding time to hit the high September market.

About one-third of the hog raisers said they would breed earlier next year. Many of those changing were the ones who had been in the habit of having their pigs farrowed in April.

Taken as a whole, the hog raisers' opinions add up this way: A majority favor the new price floors, which are $1, as an average, below present floors. There is a vigorous dissent, however, from the 39 per cent who say floors are too low.

Some of those who favor the lower floors think hogs can be profitable at the new figures. Others doubt that, but think lower prices necessary in the hog raisers' interest to prevent gluts and still lower prices in a peace-time market.

Those who think the new prices too low cite higher wages in prospect and higher prices for machinery and supplies as a result. They say $12 hogs and $1 corn make too small a margin.

There is some evidence of a shift to earlier farrowings to hit the high September market. The support price is $13 thru September and goes down 25 cents per week thru October.

A September glut is feared by some of these men. But it takes more than an earlier breeding date to get hogs on the market in September. Expert handling is also required. Probably the average farm is not equipped to rush hogs that fast.

There might be a reduction in hog numbers next year. Soft corn would be part of the cause, along with less attractive support prices. Some who thought the new prices about right said hog production would show a decrease next year. Almost everybody assumes corn will be at or near the ceiling.

That seems to be a summary of the opinions expressed by 85 widely scattered Iowa hog raisers. Individually, the hog raisers have some definite opinions. (Turn to page 40 for some pointed paragraphs.)

Early Pigs are fattened mostly on old corn. Graduated prices for next year make early pigs desirable. But condition of corn crop makes plenty of sound corn next summer doubtful. Pigs below are on the Morris Hamer farm, in Wright county, Iowa.

"Looks Like Good Apple Land," SAID SAM CHERR "But Let's Make Sure!" SAID THE COUNTY AGENT

WORK WITH YOUR COUNTY AGENT

- Attend the meetings and demonstrations he holds in your neighborhood.
- Take advantage of the free literature on farm problems that he has or can get for you.
- Help save his time these busy days by talking with him by telephone, instead of asking him to make a special trip.

Sam Cherr's new apple orchard is just coming into bearing, and it's the prettiest block of trees you ever laid eyes on.

But it came mighty near being a failure.

Sam first planned to put his new orchard across the road from his old one. He figured it would make the spraying job easier.

Before he laid it out, though, he talked with his County Agricultural Agent. The County Agent said:

"It looks like a good location. But let's make sure the subsoil is all right to give your trees good drainage and let the roots get the air they need. Putting out an orchard costs a lot of money. Waiting for your trees to prove whether or not the soil is what it ought to be is just too big a gamble."

So the County Agent got out his soil auger. And they tested the field Sam had picked. Every time they put down the auger, they found hardpan, and much too close to the surface for good tree growth.

After making test borings in two or three likely looking fields, they found a piece of wonderful apple ground clear at the other end of the farm.

That's where Sam Cherr located his apple orchard.

Since then, Sam has got lots of other help from the County Agent. He's given Sam advice on spraying, fertilizing, cover crops, pollination, and a lot of apple-growing problems.

Sam Cherr has always taken a good deal of pride in his fruit, but he says this new orchard will put better apples on the market than he's ever grown before. And he'd be the first to say that lots of the credit belongs to the County Agent. All over the country, farmers are getting help from their County Agents that makes farming *better* and *easier*. Another thing that good farmers are doing to farm better and easier is to make full use of electricity.

SPEED FARM REPAIRS WITH A G-E SOLDERING IRON

You can go right at the work at hand when you plug in a G-E electric soldering iron, because it heats up quickly. And it stays at the right heat until you are finished.

A long-lasting, cartridge-type Calrod heater delivers heat directly to the tip of a G-E soldering iron. This Ironclad tip resists pitting: no need for frequent dressing of the iron to make solder flow evenly.

Get a G-E electric soldering iron. See how quickly you can clean up those little repair jobs that now go begging. There's a size for every kind of work.

Farm Industry Division
General Electric Company
Schenectady 5, New York

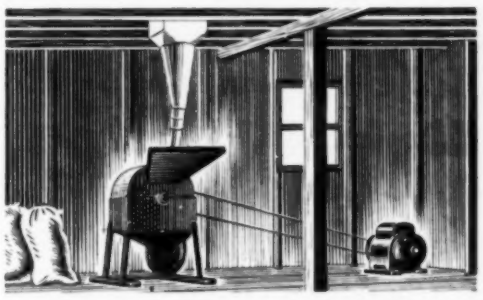
The Modern Farm Is an Electric Farm!

Electricity on the farm can make life more pleasant and work easier. If you don't have electricity, get in touch with the electric service supplier in your area.

If you already have electricity, get your full value out of it by making it do more jobs for you.

To help build up modern farms electrically continues to be the full-time job of a staff of farm specialists in the G-E Farm Industry Division.

A G-E MOTOR IS A HANDY HELPER AT MANY A CHORE



Preparing and Handling Feed—Make sure that your stock get the most out of the feed you buy or grow. Grind it to make it more palatable, more digestible.

And grinding feed with a feed grinder powered by an electric motor is hardly any job at all.

You can also put electric motors to work at many other feed-handling jobs, such as shelling corn, mixing feed, and running elevators and hoists.

In the Workshop—With a G-E electric motor hitched up at the right place, you'll have an "extra muscle" to pitch in and help at the flick of a switch.

It's easy to hitch up these handy G-E motors. You can use the same motor for many workshop devices.

When you buy a motor, get a General Electric motor with a G-E starting switch. They're dependable and long-lived—fully protected against overload.

MORE POWER TO THE AMERICAN FARMER

GENERAL ELECTRIC

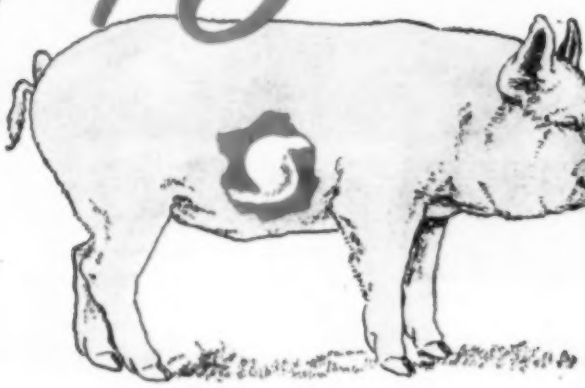
the story of a Pig's Stomach



it holds no more than a Teacup—

This is a baby pig's stomach. It holds only a teacup full of feed. If you fill this small stomach with feed low in growth-value, you get slow growth and development. But if it is filled with proper food, you get rapid growth, economical gains, thriftiness, health, and a greater profit. For example, filling a pig's stomach with only farm grains is costly feeding, because grains alone are deficient in the elements a pig's body needs for growth. Fill the stomach with a BALANCED ration of grains, plus protein, minerals, and vitamins... and the stomach will then supply the elements needed for bone, body muscles, nerves, etc., — to properly feed ALL the pig.

moral — *The pig's body gets out of the stomach just what you put into it. Feed BALANCED rations... grains, proteins, minerals, vitamins and you'll get MORE pork and BETTER pork in less time at lower cost.*

FEED INSTITUTE of IOWA 828 Liberty Building Des Moines 9, Iowa

Food Subsidies To End Soon

Government Promises to Lift Ceilings as Subsidies Are Cut on Farm Products

WASHINGTON, D. C.—The administration has taken the subsidy bull by the horns—and may take a goring before the battle is over.

Anyway, the administration has announced that practically all of the direct subsidies on farm products will end next June 30.

Subsidies on oil crops—flax and soybeans and peanuts — might be continued in whole or in part. But the others will end.

Hog subsidies will wind up before June 30. The pork roll-back subsidy will be cut $1.30 not later than February 28. Not later than March 31, the remaining 40-cent subsidy will come off.

Ceilings on pork may rise to match these changes. The ceiling on Chicago hogs, now $14.85, might rise to $16.55 by next April.

If market demand is strong enough, farmers might be getting an extra good hog price. If market demand isn't strong, the $13 support price still holds.

By July 1, beef subsidies will be dropped, so that beef cattle ceilings might rise by from $3.30 to $3.60. Since there is no floor on beef cattle prices, this would be good for cattle men only if market demand holds up.

The consumer might pay, in market price, for the removal of the subsidy if the demand is strong. If demand isn't strong, the price to the producer would suffer.

Butter and milk subsidies present the same problem. If the consumer pays the entire amount, the price of butter would rise 17 cents above present levels. If the producer pays it all, the price of butterfat could drop that much.

Everything here turns on pay rolls and consumer buying power. Most guesses are that the consumer will pay part in rising prices, and the producer part in lowered prices to him.

Altogether, the government is paying about $1,798,000,000 a year on these food subsidies, designed to keep consumer prices down and yet to keep the farmer producing for good returns.

When the government quits spending $1,798,000,000 for these two purposes, somebody must take up this slack. Either the consumer pays more—in the face of declining pay rolls—or the producer gets less.

Unless relief shipments to Europe are heavy next summer, there could be market trouble for both livestock and dairy products.

The administration is still pressing congress to vote $550,000,000 already promised the United Nations Relief and Rehabilitation Administration for supplying part of the war-devastated areas of Europe with food and clothing. When and if this amount is voted, President Truman undoubtedly will ask congress for an additional amount of $1,350,000,000 for UNRRA operations.

This money would make a lot of difference in food production needs and in the problem of supporting farm prices. Still more help would be given if congress decided to help fill northern Europe's food needs.

If prices to farmers tend to drop toward or below announced floors, then what will the government do? One school of thought wants heavy government purchases—for storage, gifts at home and abroad — and the other wants to permit the price to drop, but with compensatory payments to farmers to make up the difference.

Suppose, for instance, that hogs prices would drop to $8 if the market were left alone. Should the government buy enough pork to bring the price up to $13, or should it let the price stay at $8 and pay the farmer $5, to bring his returns up to the $13 floor?

Both methods involve subsidies. One or the other will be needed after the present roll-back subsidies and feed subsidies are abolished. But which one?

The compensatory payment plan is strongly opposed by the farm bloc in congress and by most of the major farm organizations. They want farm prices supported at near parity at the market place.

The fight is expected to come out in the open soon, with some members of congress, led by Senator Thomas (Oklahoma Democrat), chairman of the senate agriculture committee, demanding that Anderson get rid of what the senator calls the "cheap-food advocates" in the agriculture department.

As this was written, the department was rife with reports that Anderson and Under-Secretary of Agriculture J. B. Hutson are not getting along any too well. Hutson has been associated with the group advocating cheap food prices and farmer subsidies.

Subsidy? Hutson, Under-Secretary of Agriculture, is under fire from some farm groups because he is reported as favoring a free market for farm products, with subsidies, if needed, to bring farm returns up to support levels.

In his final decision on this matter, Anderson undoubtedly will be governed largely by the White House. Many of those closest to President Truman favor the unsupported farm price and the farmer subsidy. It is not meant to indicate here, however, that the president will favor this plan. There has been no indication as to how he is thinking on this matter.

Secretary Anderson has issued an order continuing the state and county agricultural war boards established to help coordinate food production programs. They will take the name of USDA Councils, on December 1.

Each of the state and county councils will elect its own chairman and secretary. Under the old war boards, the AAA chairman usually served as chairman.

INSIDE STUFF

IF ANY OF YOUR relatives live in Norway, Denmark, Holland, Belgium, France, Germany or Great Britain, it looks as if they'd have a mighty hard winter.

▲ ▲

LIKE MOST PEOPLE, I had a notion that UNRRA would help a little in northern Europe, that some army food might be released in that area, and that liberal loans might take care of the rest of the problem.

▲ ▲

TED SCHULTZ, of the University of Chicago, and formerly with Iowa State College, says this isn't so. He spent several weeks in Holland and Germany recently.

▲ ▲

NORTHERN EUROPE — including Great Britain—is on shorter rations than in war-time. Starvation and malnutrition will be worse in many places than during the war. And no action is being taken to fix things.

▲ ▲

THE ADMINISTRATION has not asked for appropriations for grants of food to northern Europe. The army can't use its surplus food stocks to help unless congress orders. The UNRRA appropriations congress is now debating will help Poland, Italy and the Balkans, but not northern Europe.

▲ ▲

HAMILTON county, Iowa, farmers were asked whether they would be willing to continue food rationing in order to help allied nations this winter. Three out of four said they would. Two out of four said they'd be willing to continue rationing to help civilians in Germany and Japan.

▲ ▲

ACTUALLY, food rationing would not have to be continued any more severely than at present. There will be American surpluses soon that could be used. But congress will have to appropriate the money.

▲ ▲

FARM BUREAU folks are warning Iowa farmers that they should not count on hotel rooms in Des Moines during the state convention, unless they have a letter from the hotel of their choice, acknowledging their reservation. Otherwise, they're likely to sleep in their cars. And November can be cold.

▲ ▲

AN ATOMIC BOMB expert reports that heat, a by-product of the bomb manufacture, could probably be used to keep a city as large as Chicago warm. And heat from the same source could be used to run power plants for electricity.

▲ ▲

NOT RIGHT AWAY, tho. It may take five or ten years to work out industrial problems involving atomic use of this kind.

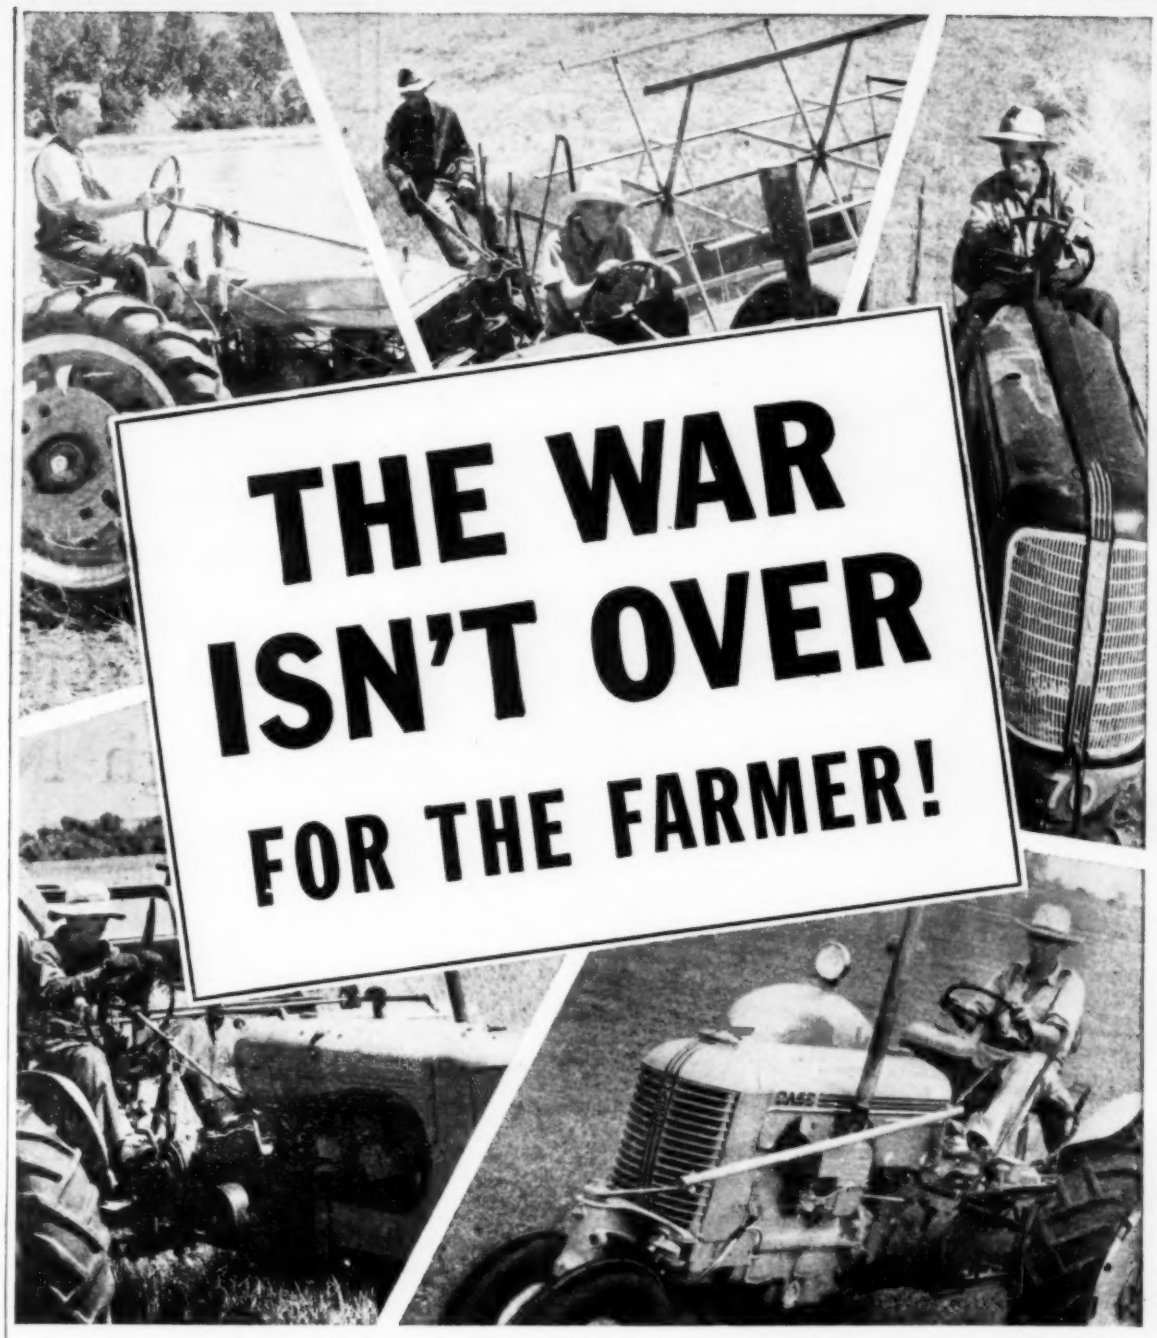
▲ ▲

WE "BUTCHERED" at our place the other day. In the new style, we just called up the expert at the locker plant and then waited for the meat to show up, neatly wrapped and labeled, in our locker.

▲ ▲

HOW I REMEMBER scraping hogs in a cold November rain! And the butchering of inexpert butchers! This locker plant method of butchering is certainly easy on farm men, but I notice that the women still have to try out the lard and fix up the hams and bacon.

DONALD R. MURPHY.



The "cease fire" order didn't end the war for a lot of people! Of course there's no longer the urgent demand for planes, ships, and guns . . . but the demand for *food* is as great as ever! Food for the Army of Occupation . . . food for the hungry millions in devastated, war-torn countries . . . and food for the people here at home.

There will be no breathing-spell for the farmer . . . nor for his hard-working farm machinery, either! This is why it is so very important to be sure that your farm equipment gets the best possible care. Consult your Phillips 66 Distributor about your particular lubrication problems. Call on him for practical help and advice. He will be glad to give you the benefit of his knowledge of the different grades of oil and their specific uses.

And if it's a *good tough oil* you need, one that stands up bravely under the intense heat, terrific pressure, and constant friction in your engine, Phillips 66 is a natural! That's right. It's a *naturally* tough oil . . . just as it comes out of the ground. It has a special "staying" quality that no amount of refining can put into an inferior oil. You won't find a more *honest, natural* lubricating oil in America than Phillips 66 . . . "Fill 'er full o' Phillips!"

U·S·S AMERICAN FENCE

Good Living Delbert Wiese owns 128 productive acres in Cedar county, Iowa, which provide a good living and a satisfactory home.

Is 80 Acres Big Enough Now?

Good Soil, Livestock Farming and Good Management Can Make a Small Farm Pay

WILL the small-sized family farm be a prominent feature of postwar agriculture in the mid-west?

The trend has been the other way. In recent years, tractor farming and farmer drafting have encouraged larger units. Tho Iowa farm acreage increased 1 per cent in the last five years, the number of farms decreased one-half of 1 per cent.

In 12 north-central states, there are 3.8 per cent fewer farms than five years ago, and average size has increased from about 195 to 211 acres. So runs a partial report from the 1945 census.

"For the country's sake, I'd like to see the family-sized farm stay," said 12-year-old Albert Keppy, of Scott county Iowa. He was just hitching up the team to mow down his second crop of mixed clover and alfalfa hay.

He is satisfied with an 80, but admits that "if it's an 80, it's got to be a good farm." This is true of his farm, here in a section where demand exceeds supply, and rents and prices run high.

"The man who owns an 80 and builds it up," he continued, "is better off than one who rents 160 and moves around all his life. In the depression, the more land you had, the worse off you were."

In the last 20 years, he has paid for and improved his farm, and has considerable to go on. He keeps 10 cows (selling whole milk), raises about 150 hogs per year, and keeps 225 hens. This year, he has half the acreage in high-producing grain—32 acres in corn and eight in wheat.

George Hansen, Clinton county, Iowa AAA committeeman, bought 120 acres in the high time and has it paid for, but would recommend buying either 80 or 160 acres, from the help standpoint.

He mentioned one experience in exchanging labor: "I helped a neighbor get his clover hay up, before my timothy was ready. Then his grain got ripe, so I had to make the timothy myself."

A former Scott county, Iowa, agent, Carl E. Rylander, put it this way: "They'll make a living on an 80, but that's all. Unless they buy surplus feed from the larger farmers."

But that is just what one Hardin county, Iowa, man is doing on his 90 acres. Purchasing his wife's home place, they have taken pride in improving the house, putting in a water system, painting and building concrete feeding floors and other livestock improvements.

He keeps livestock enough to consume double the amount of feed produced. The soil, built up by manure, raises 90-bushel corn. He doesn't plant to tax production to the limit, for, says he, "then a dry year would produce stalks and no ears."

His list of livestock is impressive: 200 hogs per year (producing 80 per cent or more of his income; 200 hens (representing 7 per cent); five cows milked (only 5 per cent), and around 25 cattle fed out (8 per cent in a typical income year).

He bought 2,500 bushels of corn last year—admits he needs larger farms around him so he can buy needed feed. This is one objection—he must always hunt for feed, which is a problem in a lean year.

But here is a younger family, that of Ralph Kay, of Scott county, Iowa. Operating on an 80 up to now, they expect to farm 160 next year and keep a hand. After all, they have buildings to go with that much, and can come nearer raising the feed required by the 300 or more pigs produced annually and their 10 Holstein cows. It is easy enough to see that they have been busy.

"We've never been quite satisfied with just an 80," Mrs. Kay admitted. "Is this because people want to be equal with their neighbors?" Most of their neighbors farm about 160 acres.

The Kays were never free to go anywhere, she went on to say. Next year, with an extra man to help, they hope to have a little leisure time.

F. M. Wall, Jackson county, Iowa AAA head, also argues for the larger farm. Suppose the owner of an 80 moves to town and rents his farm. Even at $10 an acre, he couldn't live off the income, Wall maintains.

But for this locality, a family-size farm would average larger than in the level section where the Kays live. Much land is suitable only for grazing. Dairying is done extensively; the butterfat goes to the creameries. An average dairy farm runs from 160 to 400 acres. In one township, the average of all farms is 200 acres.

Finally, let's visit an in-between size farm in Cedar county, Iowa—128 acres, all tillable, owned and operated by Delbert Wiese. His output is 250 to 300 hogs a year, "and I raised all the corn for them," he

They'll Move Lanny and Virginia Kay, Scott county, Iowa, with dog Snooky. They live on an 80 now, but their folks will farm 160 next year.

stated. "Have had up to 20 milk cows, when I could keep a steady man, and raised all the feed for them, too."

His is an example of a good farm scientifically managed to produce to the limit. And, at the same time, Wiese takes part in activities which good citizens must promote to maintain a worth-while rural community.

The secret on a small farm, as he put it, is to "watch your crops so you'll grow things that produce." Forty per cent of his crop land is in corn and 40 per cent in alfalfa—the two crops which give the greatest per-acre yield.

The rest is in oats, used as nurse crop for the alfalfa seedings. This makes a five-year rotation on his five nearly equal size fields of corn, corn, oats, alfalfa hay, and alfalfa pasture.

The second year of corn generally produces more than the first, he says. He attributes this to a better stand, due to less rodent damage. Perhaps nitrification has not progressed so far the first year after the alfalfa is plowed under, either.

Cedar county has no surplus corn, since so many buy for cattle and hog feeding. So Wiese tries to produce all he needs.

For 10 years, his corn has averaged 85 bushels, and the last three years it has gone over 100. He never got 100 bushels until he began thicker planting by power drop.

J. M. Christy, former vocational agriculture instructor here, joined in the conversation at this point. Said he: "There is a growing tendency to work smaller parts of our farms more intensively and then put the marginal land—the poorer producing acres into grass."

To show how livestock figured in the farm income, Wiese brought out his farm record book. (Kept, incidentally, since 1932.) "You can't run a farm right unless you know what each part of the business is doing," he says.

It showed he had received 80 per cent of his gross from hogs in 1944. Twelve per cent more had come from dairying; 4 per cent from poultry.

His pigs are farrowed on pasture, in April and August. He uses three breeds in what is known as the Minnesota criss-cross. They utilize much alfalfa, both ground (as in the self-fed mixtures) and as pasture. The cows are also pastured on alfalfa.

With rough or thin soils, an "80-acre farm" is a misnomer. Even 160 acres may not produce a decent living for a family. But a glimpse of what these men are doing proves that there are still possibilities in general farming on a relatively small acreage.

The Sign — The Man Behind It and the Company Behind Him ...

..all help to make your farming MORE CERTAIN and MORE PROFITABLE!

The Winged Ear of the DeKalb Agricultural Association Inc. stands for an ideal and a purpose from which it has never deviated. These are expressed in SERVICE to America's farmers and to the development of high yielding varieties of hybrid corn adapted to wide differences in growing conditions.

To accomplish its *purpose,* DeKalb has devoted many years of labor on breeding stations, testing plots and proving grounds to discover, and *fix,* those characteristics in corn which help you produce high yields on *your* farm. To fulfil its *ideal,* DeKalb has built up, trained and schooled, a corps of dealers—farmers like yourself—whose counsel and advice are continuously at your command.

There are 3600 skilled, conscientious men who stand stoutly behind the things the Sign of the Winged Ear stands for. One of them has a DeKalb proving ground on his farm not far from yours. You would be wise to consult him, for the Sign, the Man and the Company—all help to make your farming more certain and more profitable.

DEKALB AGRICULTURAL ASS'N, Inc. • DEKALB, ILLINOIS

THE SIGN OF DEKALB GOOD CORN

Here's what you want in corn and here's what you get in DEKALB!

✓ HIGH AVERAGE YIELDS
During the past 6 years more than 11,000 participating farmers, scattered throughout the nation, have averaged over 102 bushels per acre in the DeKalb National Corn Growing Contests.

✓ STANDING ABILITY
Strong, sturdy stalks and big, tough root systems keep DeKalb standing until you're ready to harvest.

✓ UNIFORMITY
Stalks the same height and ears the same distance from the ground—that's how a DeKalb field looks.

✓ EASY HUSKING
Slender, yet strong shanks make DeKalb about the "easiest pickin' corn" you ever saw, for both hand and machine.

✓ STURDY-HEALTHY-PLANTS
Good germination — quick, early growth—plants that are bred to withstand attacks of insects and disease. You'll find these qualities in your DeKalb.

DEKALB... A Great Yielding Corn

Dad, where do the tracks go?

"SON, if you walked those tracks west, you'd walk into a country so big you'd feel about knee high to a grasshopper.

"You'd see Indians sure—and cowboys, too—but you'd see lots of other things. Miles and miles of grain, more sheep than you ever counted—cattle galore; sky-scrapin' mountains that look like they had a hunk of ice cream on top of 'em.

"You'd see rushin' water turnin' factory wheels and changin' thirsty waste country to land as green as our pasture; apples half as big as your head and trees as tall as Jack's bean stalk. You'd meet friendly people, livin' on farms and ranches and in up-and-comin' towns and cities that ain't much older than you, as towns go.

"Finally, you'd wind up lookin' out over the Pacific Ocean. Yes sir, if you'd walk those tracks west, you'd see a powerful lot of what makes America great."

* * *

The Milwaukee Road tracks lead to new opportunities. You can choose your climate and scenery—the type of endeavor you're fitted for. Live in old established communities or pioneer in "young" country. If you or your family are thinking of making a move in the days ahead look to the west and northwest!

AAA Program Shifts To Consumption

Get Food to People; Adjust Production as Little as We Can, Says Director Smith

MAKING the farm program fit peace-time farming is not going to be easy. A preview of some of the coming problems was laid before 300 farmer-elected AAA county committeemen, in a meeting at Des Moines, Iowa, November 1 and 2.

Can we avoid production control? How will we let loose of subsidies? How get some of the row-crop acres into grass? How can we stimulate consumption to use the 33 per cent increase in farm production?

Those were some of the questions. Farmers, professors, food officials and labor representatives talked to the committeemen.

Farmers' surplus problems will not be solved by farm production going down to pre-war levels. That was the warning given by Geoffrey Shepherd, Iowa State College economist. Placing the present farmers' production 33 per cent above pre-war, Shepherd expects production, by 1950, to be 12 per cent above present levels.

Reducing production isn't the way we want to do it, said Le Roy K. Smith, director of the north-central division of AAA (now PMA). Smith stated:

"We want to increase consumption so we will have to do as little adjusting of acres and livestock numbers as possible." He described several methods.

Lots of jobs, and good pay for the man who works for wages, was one method of increasing consumption and making production controls unnecessary. He said it was better for the man in overalls to get the pay raises rather than the executive who already gets all the food he and his family can eat.

Other methods of increasing consumption recommended by Smith were: (1) Stimulate school lunches; (2) encourage use of farm products for making industrial products; (3) get consumer prices down in line with producer prices. Eggs were mentioned particularly.

"We still may have to adjust some crops to consumption," said the regional AAA director, after considering possibilities in increasing consumption. He mentioned "leveling off production of wheat, soybeans, some vegetables, poultry and eggs."

Smith said the 1946 farm program will be much the same as that of 1945. Payments will be made for soil-saving practices. Almost the same practices will be paid for, but county and township committees will have more power.

In a panel discussion of what the farm program for the next five years should be, Robert Loss, Kossuth county farmer committeeman, said loans on grain should have a part in the program. "But we must find an outlet for the products and not just pile them up," he warned.

John J. Kelley, of Black Hawk county, said the dairy business would be in a bad way if the feed payments of 17 cents on butterfat and 15 cents on milk were withdrawn. He didn't think the consumer could take up all the slack.

Jack A. Armstrong, Sioux county, said the livestock producer would get hit if the subsidies were removed "at one fell swoop." He thought not over a dollar at a time should be removed.

D. Earl Moyers, of Louisa county, said food subsidies had a lot to do with many industries in this country. He said they also kept food prices down during the war. He raised this question: If farm subsidies are withdrawn, should not subsidies, direct and indirect, to all other industries be withdrawn, too?"

Basil Huston, AAA farmer fieldman from Henry county, named four ways to increase consumption: (1) School lunch program; (2) Food Stamp plan; (3) full employment, and (4) United Nations relief. He said we had only scratched the surface with the Food Stamp plan.

Paul Benner, farmer fieldman of Marshall county, said the short-term prospects for farmers look good; the long-time prospects are questionable. "The closer we come to free trade, the better off agriculture will be," he declared.

Dewey Cornell, AAA fieldman from Warren county, said lime phosphate and fertilizer would help soil problems. To get the products into consumption, he said: "We can spend for war; why not for peace-time well-being?"

Maurice O'Reilly, State Crop Insurance director, said farmers have the same right to "all risk crop insurance" as the laboring man has for unemployment insurance.

Dry Corn Rolls out of the wagon into the elevator easily. If the corn has to be kicked down with the front end of the wagon raised, it may have too much water in it to keep. Corn being unloaded in Dallas county, Iowa.

Workday Pointers

BREEDING SEASON for April pigs is from about December 10 to January 10.

▲ ▲ ▲

FEED SOFT CORN or high moisture corn to cattle and hogs now. Save good corn until later.

▲ ▲ ▲

PUMP LEATHERS should be renewed before winter. Pulling the pump is a bad job on a cold, snowy day.

▲ ▲ ▲

BOARDS under corn piles or round cribs will save their cost in the quality of the corn and in easier shoveling.

▲ ▲ ▲

FALL PIGS should be full-fed every day of their lives. It won't pay to try to hold them long enough to get cheap gains on grass.

▲ ▲ ▲

CLEANING and cooling make high-quality milk. Bacteria get a start in dirty utensils, and reproduce rapidly if the milk is warm.

▲ ▲ ▲

BEARINGS full of grease don't have room for dirt or moisture. Pump them full when the farm machines are used the last time this fall.

▲ ▲ ▲

QUICK ACTION is necessary to save horses which get corn stalk disease. Shivering, muscle contractions or prostration are symptoms of the disease.

▲ ▲ ▲

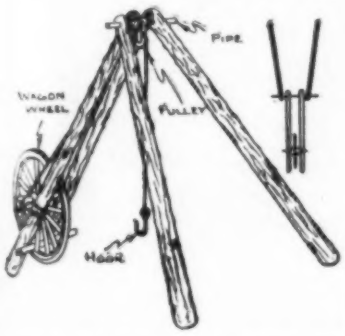
ELECTRIC MOTORS are damaged by water. If kept outdoors, motors should be covered. If indoors, they should be shielded from leaking pipes or splashing water.

▲ ▲ ▲

APPLES KEEP BEST when the air is moist and the temperature relatively low. Temperature close to 32 degrees and humidity at around 80 per cent are recommended by R. L. Munn, of the Illinois extension service.

▲ ▲ ▲

A BUTCHERING HOIST can be constructed with four straight poles or 4x4's, an old wagon wheel and a short rope and pulley. Lifting power is produced by wrapping the rope



around the hub of the wheel and using the rim for a hand-hold. One man can lift a hog, or the hoist may be used to lift tractor wheels or other heavy objects.

▲ ▲ ▲

IN SHARPENING TOOLS, hold the cutting edge across the face of the emery wheel as much as possible. This method wears the stone down evenly. Laying the blade lengthwise with the stone wears a groove that spoils the stone for some kinds of work.

▲ ▲ ▲

NOVEMBER is the month when any summer implements, still outside, should be put in the shed. If there isn't room in the shed for all the implements, be sure polished surfaces are heavily greased. And the machines should not be where livestock can get on them.

Ready to Give You Quicker Starting ---Safer Engines this Winter!

NEW Mobiloil

By far the Finest Mobiloil Ever Offered—Proved in Thousands of Wartime Buses, Trucks and Army Vehicles.

Not Since I'm Getting

Kellogg's

PIG and SOW MEAL

WHO'S AFRAID OF THE BIG, BAD FARROWING DAY?

Not me! I *know* I'm building my baby pigs right. Just keep the Kellogg's coming, boss, and I'll come through with a big, husky litter.

IT pays to feed baby pigs right *before* they're born...Bigger and healthier litters mean bigger profits at market time...So give your brood sows a supplement you're *sure* is rich in vitamins, minerals, proteins and other pig-building essentials. Give them Kellogg's Pig and Sow Meal.

You'll find that Kellogg's Pig and Sow Meal gets results . . . You'll find that it's economical to use, and dependable. And, like all other Kellogg products, it measures up to the highest standards of quality. Start feeding this specially formulated and blended feed to your brood sows today. Your local Kellogg Feed dealer will be glad to supply you.

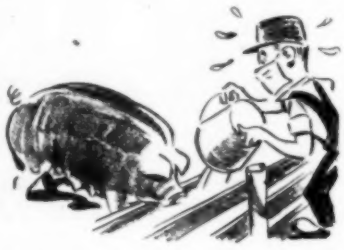
What's Sure About Bang's Disease?

Calfhood Vaccination Along With Clean-Up Methods Offers Best Hope of Clean Herds

LET'S get down to brass tacks about this Bang's control. All agree we want to get rid of the infection in our cow herds. That is the long-time goal. How do we get there faster?

The test and slaughter method is available to herd owners. Indemnities are paid on condemned animals in a manner similar to the T. B. eradication program. Clean barns and segregation of diseased animals are of proved value.

Calfhood vaccination offers promise for the future. Many farmers are vaccinating their entire herds with "Strain 19" in an effort to stop their calf losses. Is this wise?



Brucellosis (Bang's disease in the veterinarian's language) is an economic menace. When an abortion "storm" hits your herd, and you lose three-fourths of the calf crop in one year (not to mention the resulting troubles of sterility, udder infections and cows coming back with repeat abortions), you know you've been thru something.

Its menace to human health is growing, too. Undulant fever has become more prevalent than typhoid. The swine type of brucellosis is responsible for much of this infection. One sow lost her pigs, and the hired man told the veterinarian about it. After that, the hired man refused to go near her pen.

"The vet says," he reported, "that if I touch her, I'll get a heck of a fever." Exaggerated, no doubt, but it might be better if all farmers held a similar respect for the dangers—then they would be ready to do something about stamping it out.

There is a lot of misinformation afloat about Bang's (brucellosis), and disagreement even among veterinarians about methods for its control. So, first, let's put our finger on a few things we know for sure.

1. Brucellosis is growing worse in hogs. From 1 to 3 per cent of all hogs slaughtered are estimated to be infected. It will spread from hogs to cattle, but not vice versa.

One of the most virulent outbreaks of undulant fever on record was found to trace from hogs to cattle to humans. The moral: Do not let suspected hogs run with dairy cattle.

So far, there is no practical control for the disease in hogs, except complete slaughter of the sow herd and clean up of the premises. To test and retain non-reactors is recommended only for valuable purebred herds.

2. A positive reaction to the agglutination test proves definitely an animal has the bug. It may be a mild strain introduced with vaccination, which has not cleared up, or it may be the virulent type (a "hot" infection). That's the uncertain thing.

But one better be safe than sorry. The blood is tested in three dilutions—1 to 50, 1 to 100 and 1 to 200. If agglutination shows in the high "titres," it is definite proof that the animal is a positive reactor; if only in the more concentrated solution of blood (the 1 to 50), it may be classed as a suspect, and be rechecked.

In a small percentage of cases, a definitely infected animal will not show positive to the test. For this reason, also, repeat tests are advisable.

3. The interval between exposure and the point when an animal will exhibit a positive blood test may vary from as little as two weeks to as long as eight months. So, even tho the animal tests negative, you can not be sure that it isn't going to contract the disease from a more recent exposure. This again emphasizes the element of uncertainty in all testing, and is a third reason for making repeat tests.

4. "Strain 19," a weak but live variety of the brucella organism, when injected into heifers four to eight months old, will create a high state of resistance to the disease. Care must be taken to have good vaccine. It should be kept refrigerated, and used within 60 days after preparation.

Treatment with "Strain 19" does not guarantee immunity in all cases. Some will still abort if exposed to a "hot" infection, so must be kept away when known spreaders are calving.

Four months seems the youngest age from which a reasonable degree of immunity may be expected. If vaccinated when over eight months old, the blood test may never return to a negative status. All heifers generally show a positive blood test following vaccination, which clears up in most cases. It is found, however, that about one out of 20 such vaccinated animals will still show a positive test at two years of age.

In spite of the afore-mentioned uncertainties, all agree that calfhood vaccination, with preliminary blood testing, is an important part of the program aimed at whipping brucellosis in cattle. Many states are passing laws to encourage this.

New York supplies free vaccination, either combined with testing for those who wish to clean up and have their herds listed as approved, or without herd testing, for those who can not afford to lose their reactor adults.

But it is over adult vaccination that the argument begins. More than one-half of the states permit vaccination of older stock, provided the animals are not over four months along in pregnancy.

It is not recommended in these cases: (1) Where the breeder expects to sell stock subject to the blood test; (2) where he is keeping stock subject to blood testing (in other words, is under a test-and-slaughter plan); (3) and—mark this—where there is only light infection in the herd, and (4) in certain cities whose ordinances bar use of milk from vaccinated animals.

Adult vaccination should be recog-

nized as a sort of emergency measure for infected herds that need to be kept going. For example, where test and slaughter would prove ruinous to the business, or clean animals brought on the premises to maintain the milking string, perhaps, might contract the disease because of the impossibility to allow a sufficient interval to clean up the premises. On the other hand, such new animals, if vaccinated, can keep the business going.

In such a situation, should cows with physical evidence of the disease be slaughtered?

Dr. C. C. Franks, chief of the Iowa Division of Animal Industry, insists that there is no curative value in "Strain 19," and if administered to diseased cows it will only act as a stimulant to the infection already present.

But many owners, and even veterinarians, continue to vaccinate cows which have aborted, and claim results therefrom. Good judgment points against this practice, since retention of a "hot" reactor is just that much more apt to break down the resistance of some other member of the herd to the disease.

Indiscriminate buying and selling is the devil's own tool for spreading brucellosis in a community. Contrary to previous beliefs, altho an infected boar can spread brucellosis thru a sow herd (and so must be shunned like poison), the bull is rarely a factor in its spread among cows.

But look out when you buy a cow and the reply to your query about Bang's is this: "She's been vaccinated, so of course she will be a reactor." This is an easy way for unscrupulous dealers to move reacting cattle in periods like this, when demand for milk stock is good.

Or take an honest fellow with a good producing herd. He feels he dare not test, for if he does and finds a good cow that is a reactor, she is a marked lady. She must be tagged, and can be sold to another only upon permit, with the buyer cognizant of the fact. To save himself, he proceeds to vaccinate all adults and sell them indiscriminately.

So it behooves any one with a clean herd to fight shy of adult vaccinated animals. They're dangerous females.

There are no laws governing intrastate trade as there are in interstate trade. You must be your own cop.

Adult vaccination, then, may have its place—but only for the emergency, and only as we recognize it for what it is—a crutch and not a cure. And when such cows are milked, we need to be reminded that their product is unsafe without pasteurization.

Once a large reservoir of officially vaccinated heifers is built up, the situation should settle itself. These certified maidens are the foundation stock for a brucellosis-free future such as we are beginning to enjoy with respect to T. B.

Spread Manure On Plowed Ground

Plowed ground is a good place to spread manure in the fall and winter. The manure, especially if it has some straw in it, will prevent the land from washing in wet weather, or blowing in dry weather. It will help hold snow and moisture, too. One warning: If manure is spread on plowed hillsides, always make the spreader tracks on the contour.

When Johnny takes a "second look," WILL HE STILL WANT TO FARM?

After the "welcomes" have all been said—after he's caught up on sleep and home cooking—Johnny's going to take a "second look" around the farm.

Then, will he still want to farm?

Johnny will be looking for the answers to two important questions. First, if he stays on the farm, will he make enough money to have the things he wants in life? Second, will he face all the back-breaking work and long hours his parents endured?

Both answers, he knows, depend a lot upon how many jobs he can do with machinery and *power*. What's more, Johnny has new ideas about power. In war, he saw modern gasoline engines in action where men's lives depended upon power and reliable performance. He knows power and performance count in farming, too.

When your son takes his "second look" around the farm, he'll feel a lot better about farming if he sees a modern gasoline tractor with a high-compression engine. Such a tractor—designed for instant starting, convenient operation, power and reliable performance—can make farm living more pleasant, more profitable and far more attractive.

If you want *your* boy to settle down on a farm, either your own or one in your community, why not plan now so that when he takes his "second look" you can be sure that he'll still want to farm?

HOW TO GET MORE POWER TO DO MORE JOBS

Use Gasoline to—

Start quickly in all weather—idle without stalling.

Save time and trouble—speed work—shorten warm-ups.

Save oil—reduce changes; eliminate bother of two fuels.

Use a High Compression Tractor to—

Squeeze more work from each gallon of gasoline.

Work more acres each day; get work done on time.

Get more power from an engine of any given size.

For More Power for More Jobs, get a new High Compression Gasoline Tractor when you buy. Or, ask your dealer about a "Power Booster Overhaul" to high compression your present tractor.

Free, new illustrated pamphlet, "Questions Farmers Are Asking About High Compression," gives detailed information. Write for it.

ETHYL CORPORATION

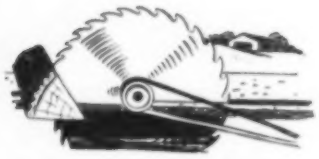
What's THE GREATEST DANGER on your farm today?

A FIRE?

A MEAN BULL?



AN UNSHIELDED SAW?

AN OPEN WELL?

A RICKETY BUILDING?

INFLATED PRICES?

We think it's the last one. Because—in a string of boom years it's so easy to forget that such years *aren't* normal.

So you're tempted to try for a quick turn-over on some more land. (Even though the price is sky high.) Or to seek inflationary rises in farm prices. Let's not forget that millions of families have to spend about 40% of their income just to eat . . . and that higher food prices for the other fellow mean he'll have to raise his prices to you.

Isn't it wisest to assume that NO wartime is a normal time? That the smart thing to do is to put yourself and your farm into permanently better shape for whatever the future holds?

Can you make your land more productive? Improve your livestock? Pay off those debts faster? Those ways you're safer no matter whether farm prices hold or drop.

How about laying aside money for crop failures or livestock losses that hit the best-managed farm? Reserves for new machinery and equipment after the war? For the kids' education? That trip you've promised your wife for years and years?

Salt away dollars for the future. Remember that War Bonds let you buy your 1955 dollars for only 75¢ today!

Says Corn Mark-Up Is Too Much

To the Editor: I've been studying the corn ceilings, and some wrongs present themselves. Here, farmers are allowed to charge or receive $1.00¾ per bushel for corn at the farm, or $1.02¼ delivered to the dealer. A retailer has an 11-cent markup allowed. That means selling it back to my neighbor at $1.13¼.

Why is our government allowing them 11 cents now? It looks like some more fixings for the big boys.

It seems to me that the public's attention should be called to this fact and serious efforts made to correct the situation.

The retailer's margin is more clear profit than the producer gets.—Russell Perry, Story County, Iowa.

Would some farmer elevator man like to comment?—Editor.

Cash Equivalent Lease Favored

To the Editor: We may as well be realistic in this matter of farm leases. There are four parties to every lease—the state and its subdivisions, the tenant, the landlord and the land. In every case, the tenant and the land must meet these four obligations if they are to be met at all.

A proper crop rotation should be determined and set out clearly. The tenant should assume the obligation of taxes, insurance, upkeep, repair and replacement of improvements. He should give bond or some other security covering these items.

The lease should be continuous, but never to be terminated by the landlord short of five years. The rent should be readjusted each 10 years.

When the above have all been provided for, the landlord and the tenant should determine how many bushels of corn per acre will be a fair rent for the landlord when corn is worth 80 cents per bushel. Each year, the landlord should receive the cash value of that many bushels of corn per acre.

Under this lease, the landlord would be relieved from the necessity of keeping barn doors on their hinges and screen doors fly-proof. Both tenant and landlord would be relieved of the troubles that arise when two men must see eye to eye on many matters of small importance.

The tenant would have the sole responsibility of disposing of the entire production. If livestock will pay more for grain than the elevator, let him feed it. Likewise, any increase due to good seed, manure, fertilizers, weed control, etc., will go to the tenant. That is all the incentive there is to give him. If the tenant thinks a new fence, feeding floor or building is worth its cost plus, he is free to build it, and the plus will be his.—Geo. V. Leffler, Van Buren County, Iowa.

This would give the tenant more responsibility; also the full benefit of good farming. What do our readers think of such a lease?—Editor.

"Unprepared Have Always Won"

To the Editor: I do not believe in the peace-time draft. It is always the country that has trained from the cradle to the grave that has lost the wars.

I have lived thru three wars, and the unprepared have always won. I don't believe in trying to make peace and keep other countries from making war, and then have our country go to preparing for war.

Keep planes and ships a-plenty to protect our country, but let's not build a big army that will set a bad example for other nations.—Farmer, Clay County, Iowa.

Sign your name and give your address when you write to Voice of the Farm. If you wish, you need not have your name printed in the paper, but we want to know who you are and that the letter is genuine.—Editor.

"If Labor Gets 30 Per Cent Cut"

Stover, of Iowa Farmers Union, Declares Farm Products Will Suffer With Pay Roll Slashes

THE Iowa Farmers Union lined up last week for the full employment bill, MVA, President Truman's unemployment insurance recommendations and liberal wages for labor—including farm labor.

"If labor gets a 30 per cent cut in wages," said President Fred Stover, in explaining that the shift from the overtime war week to a 40-hour peacetime week did mean a 30 per cent cut in take-home pay, "sooner or later you and I will take a 30 per cent cut in prices of farm products."

The resolutions of the convention, held at Des Moines, approved a 65 cents an hour minimum wage for all workers, including farm workers. Extension of the Social Security program to farmers was also recommended.

Land price and other inflation controls were asked. And the convention went on record as against acreage restrictions except where needed to further soil conservation.

Revival of the Food Stamp program was approved. The convention asked for a graduated land tax in Iowa.

As usual, the convention asked for the "divorce of the Extension Service and the Farm Bureau," and approved the Elmer Thomas bill providing for such separation.

Patton He told Iowa Farmers Union delegates to back full employment bill.

The Thomas committee was asked to hold hearings on the bill in Iowa, so that examples of Iowa's Farm Bureau-Extension Service tie-up could be presented.

The resolutions, which also opposed compulsory military training and asked for liberal shipments of food to Europe, were in accord with the policy of the National Farmers Union and James Patton, president.

Patton was present at the second day of the Iowa convention, and outlined for the 300 delegates and visitors the National Union's program to "produce and distribute abundance."

The Union asks for balanced farm production on a full scale, in the hope that federal policies can provide full production by labor and industry at the same time.

Export sales, Food Stamps and other devices are suggested by the Union to keep farm income up until full production is achieved in other parts of the economy.

In one of the most quiet elections in years, Fred Stover was unanimously re-elected president. At the last, thru the withdrawal of Anton Green as a candidate for the board, only three men were running for three vacancies on the board.

Two, Dick Snedden, of Lee county, and G. H. Beck, of Henry county, were old members running for re-election. The third, Lee Harthan, of Cerro Gordo county, was a new man. All were named by acclamation.

A year ago, in a bitter election fight, O. L. Weber, of Woodbury county, won the presidency. After clashes between board, president and secretary, he resigned some months ago. Stover succeeded him.

Some indication of discontent with the new $12 support price for hogs came to the surface at the convention when a delegate brought from the floor a resolution stating that the Union "opposes forward pricing as a national policy to control production."

Farmers Union officials reported only small membership gains and a treasury not too well supplied. However, President Stover insisted that the Union had a great responsibility and good prospects for future growth in trying to protect the labor income of the average farm family.

"Higher farm prices to raise total farm income won't solve that problem," he said. "We must get a proper share of that income to real farm operators and workers.

"We must dare to plan and act boldly and demonstrate the same inventive ingenuity in dealing with our social and economic problems that we have in other matters. We believe that we can have, in the complex civilization of tomorrow, just as much freedom, prosperity and security as we are willing to help guarantee to every one everywhere in the world."

Ben Stong, editor of the National Union Farmer, gave the convention a picture of the possibilities of MVA and accused the American Farm Bureau Federation of being one of the principal obstacles to the passage of the bill. He compared the Federation's position now to what he said was its opposition to the early TVA program.

Sure this is The Machine Age...

But YOU still do the work!

Can you picture yourself taking a 353-day vacation? No, we're not crazy . . . Believe it or not, with the exception of trucks, tractors and windmills, that's how long the average farm machine remains idle each year.

A survey by the Iowa State Agricultural College proves it! The average farm machine doesn't just *wear* out—it *RUSTS* out! But—

Here's how You can REMOVE RUST

Cities Service RUST REMOVER quickly removes rust. It's odorless, non-inflammable and is easily applied with a cloth or stiff brush, or by immersion. Rust Remover can be used over and over again. Use it and see how it makes rust literally vanish.

Here's how to STOP RUST

Apply Cities Service ANTI-CORRODE to prevent further rust or corrosion on all farm machinery, home equipment, vehicles, tools, screens, etc. Anti-Corrode is not affected by rain, humidity or handling. It's ideal for stored machinery. Simple to apply.

Don't let Rust Eat Away Your Equipment:
Order Rust Remover and Anti-Corrode from your Cities Service Supplier *Today* —or mail this coupon NOW.

Should Vaccinated Pigs Get Corn?

To the Editor: How should pigs be fed for the first few weeks after vaccination? Some say to take all corn away from them, but it seems to me that is a very sudden change of feed, and would also stop gains for a time.—R. L. V., Fremont County, Iowa.

Pigs should have a ration slightly on the bulky side for the first two or three weeks after being vaccinated. Corn need not be entirely eliminated, but should be cut down. A mixture of several grains, including some oats, is good.

Bran or alfalfa meal are good feeds to add to the grain, especially if the pigs are not on pasture. Two to three weeks after vaccination, the pigs can be getting all they will eat of a concentrated ration again.

It might be advisable to change the feed gradually, beginning a few days before vaccination. The danger in changing feed, however, is in changing from a light, bulky ration to a concentrated ration. Changing from a heavy to a light ration is not considered dangerous.

Therefore, the gradual change of feed should come when the pigs are being put back on full feed of grain, proteins and minerals for fast gains.

Cows Giving Watery, Gray Milk

To the Editor: I have two cows giving a watery, gray milk which is not usable. One cow has a three-month-old calf. What can be done about it?—E. B., Union County, Iowa.

When cows give milk such as you describe, it is usually caused by the disease we call mastitis or garget. The fact that you have two cows giving this kind of milk indicates that the trouble is the infectious type of mastitis, caused by germs.

This leads us to say that, if the disease is of the infectious type, it can easily be spread to any healthy cows on the farm. Healthy cows may get mastitis from lying on the same floors as the infected animals, or it may be carried on the hands from one cow to another when milking.

Even the calves which drink such milk may become infected with mastitis. In such cases, heifer calves will suffer from the disease when they come in milk.

If taken in time, some cases of mastitis can be cured by internal treatment. Several drugs, including penicillin, sulfa drugs and colloidal silver, are injected into the udder tissue. The kind of drug to use depends on the type of mastitis infection found.

Good milk cows are worth treating where there is a chance of freeing them from the infection. Otherwise, prepare diseased cows for the block before they spread mastitis to other cows.

Can Chicken-Eating Hogs Be Cured?

To the Editor: How do you cure an old sow that eats chickens?—J. S., Wayne County, Iowa.

Several methods are claimed to reform hogs that get the chicken-eating habit. The only sure way is to keep the hens in the laying house and the hogs in the hog yard.

Hogs and chickens should not run together, anyway. Hogs get tuberculosis from chickens. Hens over one year old are heavily infected.

What to do for RUNDOWN COWS

Cows that are rundown, or milking under forced production, need the "lift" that they will get from

Dr. DAVID ROBERTS HERD TONIK

Simply put a tablespoonful of Herd Tonik in the feed morning and evening. Try a 3 lb. package on ONE cow. Her improvement will convince you that you need HERD TONIK for your entire herd. An overworked cow must have a tonic just as an overworked machine requires extra care and lubrication.

HERD TONIK is Supplied as Follows:

3 lb. pkg. (for treating 1 cow).....$1.25
13 lb. can. (enough for 5 cows)..... 5.00
50 lb. drum (for a herd of 15 cows)....15.00
100 lb. drum (for 30 to 35 cows).....28.00

New Weed Sprays

HORMONE weed sprays have reawakened interest in the killing of lawn and farm weeds with chemicals. A half-dozen companies are making weed killers from the compound known as 2-4 D.

These weed killers are effective, says E. P. Sylwester, of Iowa State College, and they promise to reduce the high cost of killing weeds with chemicals. He estimates the cost of spraying with hormones at $4 or $5 per acre, and the cost may get lower.

The hormone weed spray kills lawn weeds and many farm weeds, but does not injure the grasses. Blue grass, timothy, brome grass, orchard grass and Reed's canary grass seem to resist the plant poison unless temperatures are very high at the time of application. Legumes, however, are not resistant to the spray.

Deep-rooted, noxious weeds, such as Canada thistle and bindweed patches, are being treated with the hormone spray. Results will be fully evaluated and announced next spring.

It is possible that more than one spraying will be necessary on these weeds, Sylwester says. Quack grass, however, is not hurt by the hormone spray. Small grains are immune, but corn is severely stunted.

Dandelions and nearly all of the lawn weeds are controlled by the hormone spray. It is especially recommended for lawns.

The time to use the hormone spray on weeds is on a warm, dry day, when there is a prospect of four or five hours without rain, says Sylwester. Weeds to be sprayed should be in good growing condition, as they often are in June.

Hormone weed sprays are new, and they may be dangerous. All users should follow carefully the directions on the container. Sylwester cautions users particularly against using hormone weed sprays in sprayers used for vegetables or fruit trees. Hormone sprays should have a separate machine unless sprayers are thoroly washed out and the plant poison all removed or neutralized.

Farmers Must Label Seed They Sell

Iowa farmers must label seed they sell, or post a placard at the bin giving information about the quality of the seed, under an Iowa law. This law applies to sales to other farmers for use, and would not apply to sales to seed houses or wholesalers.

The label on the bag, or the placard, must tell the percentage of germination, including the hard seeds present, the rate of occurrence of secondary noxious weeds, and there must be a guarantee that no primary noxious weed seeds are present.

If farmers wish to send a sample to a laboratory for testing, it can be sent to the Iowa State College Seed Laboratory, at Ames, Iowa. The cost is $1 per sample. The fee is fixed by state law.

Find New Cocklebur In Iowa Field

Cockleburs of a new kind — spiny cockleburs—have been found the second time in Iowa. Latest appearance of the weed was in Dallas county. It had been discovered before in Story county.

The plant is slender, has spreading branches, and is slightly yellow in color. It has three yellow spines at the base of the leaves.

Like the common cocklebur, the plant is an annual. It produces seed abundantly. Control is by the same method as the ordinary cocklebur—destroy the plants before the burs mature.

JUST PLUG IT IN! . . .

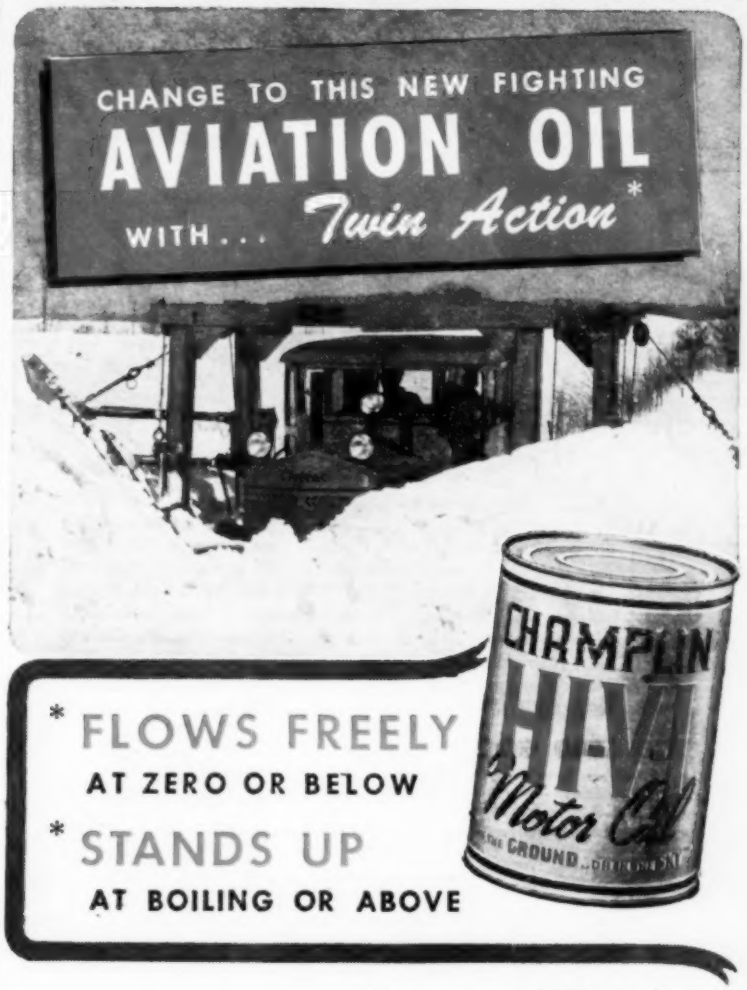
COLD WEATHER COMING!



* FLOWS FREELY AT ZERO OR BELOW

* STANDS UP AT BOILING OR ABOVE

Photo Courtesy CLETRAC DIV., The Oliver Corp.

In winter, your tractor needs an oil that flows freely and lubricates instantly. Equally important, the oil you use must not thin out and breakdown after your tractor engine gets hot.

With Champlin HI-V-I . . . the new fighting aviation oil . . . you get this TWIN-ACTION.

For Champlin HI-V-I was developed especially to meet all weather demands of our air forces . . . to be used wherever they had to fly . . . in freezing northern outposts . . . over seething desert wastelands . . . or through the stratosphere.

N-Hexane, an extraordinary new solvent, throughly de-waxes Champlin HI-V-I, producing a remarkable new cold pour test rating. It flows freely, at zero or below.

Then, the unusually high viscosity index of Champlin HI-V-I gives it extra stamina to withstand the most extreme temperatures . . . even boiling or above.

So this winter, give your hard working machines on the ground, the TWIN-ACTION lubrication essential in the sky. Use Champlin HI-V-I. Available now in refinery sealed cans from friendly Champlin service stations and dealers. Also always ask for Champlin Presto gasoline.

Greatest Feeding Hybrid of them ALL!

1945 Grand Champion over all breeds, fed on Reid Hybrids by Harper & Son, Story City, Iowa.

REID-Fed Hogs, Champions 5 Straight Years

There's a reason why the state champion fat hogs, for the last 5 years, have been fed out on Reid Yellow Dent Hybrids. Those mellow, starch Yellow Dent kernels are so easy to chew and digest—they really put on the pork. Harlan Harper & Son, who showed the 1945 grand champion barrow, say: "We have found Reid Hybrid the best to feed out champions." J. B. Seehusen, Center Junction, a champion feeder in '41, '42, and '45 says: "It has no equal for top yields of corn that shells and feeds the best." Get this big-yielding, wonderful feeding hybrid for YOUR acres next season. Supplies limited. Reid varieties from 90 days and later. Mail coupon today.

REID SEED GOOD

All Reid Hybrid seed was grown in frost protected areas and gathered early for this season. If you see your local Reid Hybrid dealer soon, you may be able to get your supply. Better see him TODAY.

Now, 3 additional seed plants to serve you. Also, these Red Letter Hybrids—90, A. S. AF11, 16, AQ 25, 25A, 29A, TX1.

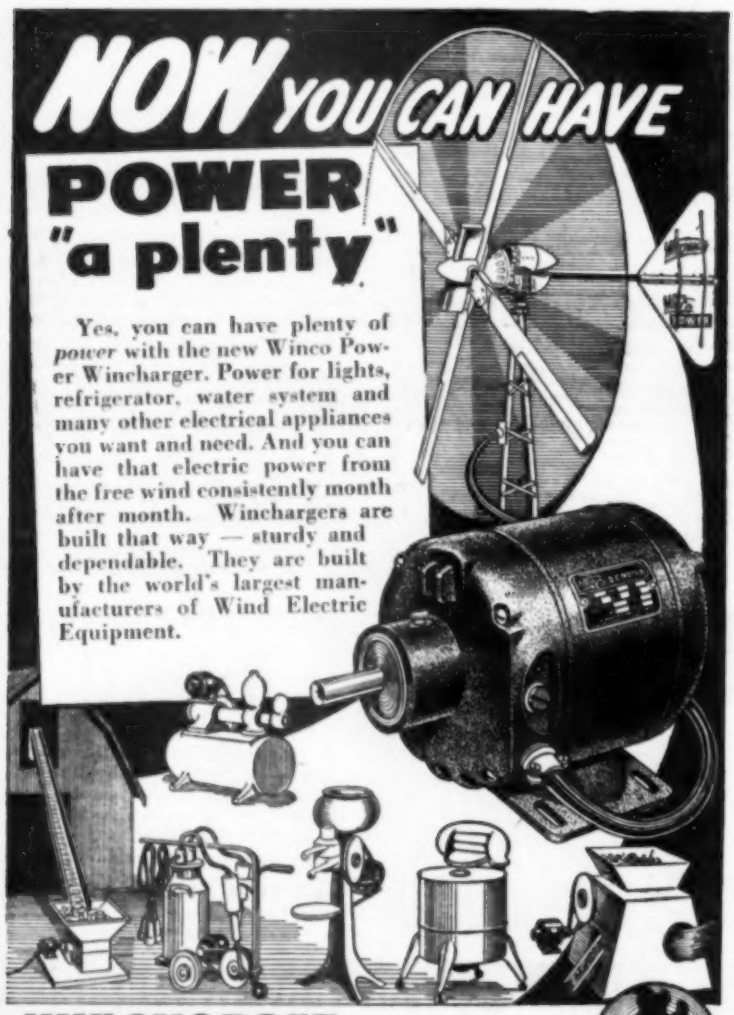
NOW YOU CAN HAVE POWER "a plenty"



Yes, you can have plenty of *power* with the new Winco Power Wincharger. Power for lights, refrigerator, water system and many other electrical appliances you want and need. And you can have that electric power from the free wind consistently month after month. Winchargers are built that way — sturdy and dependable. They are built by the world's largest manufacturers of Wind Electric Equipment.

WINCHARGER ELECTRIC SYSTEMS

WINCHARGER CORPORATION SIOUX CITY, IOWA

"One hand a necessity; two a luxury," says Ralph McKinney, who threshed this summer after losing a hand last year in a corn picker.

Lost Hand, But Keeps On Farming

Ralph McKinney, Marshall county, Iowa, farmer, finds that farming can be done one-handed. "One hand a necessity; two a luxury," he says. He lost one hand up to the wrist in a corn picker accident last year.

This year, McKinney worked with the Al Kunkel threshing crew. The crew was composed of half men and half women. All were from the Kunkel and McKinley families.

They threshed 509 acres of oats with the half-men and half-women crew, and then jumped into clover, timothy and soybeans.

Hay and Corn Drier Made by Farmer

Gustave Schwietert, Clayton county, Iowa, is making his own hay and corn drier. It is designed particularly to dry chopped hay, but he expects to use it this fall to dry his shelled corn.

Schwietert has been experimenting for several years with small plants. He estimates the one he is making now will dry one ton of chopped hay per hour.

The chopped hay or shelled corn will enter one end of a steel tube about 24 feet long and 4 feet in diameter. The tube is turned by electric power. Fuel oil heats the air to cause rapid absorption of moisture. Bars in the tube give the material a tumbling action, which pushes it toward the delivery end.

Schwietert plans to get most of his 200-acre farm in alfalfa. Then he will dehydrate the hay and sell it on the commercial market.

More Local Control In Farm Program

To each farm according to its needs will be the rule for use of soil conservation funds in the farm program for 1946, according to Le Roy K. Smith, director of the north-central region of the Production and Marketing Administration (formerly AAA).

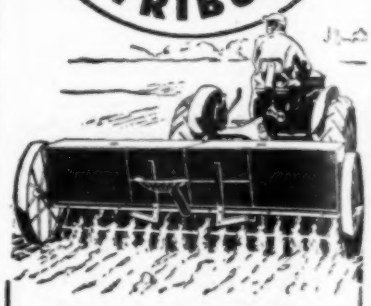
Payments on any particular farm will not be limited to 50 cents per crop acre next year. The township committeeman will sit down with the farmer and work out the practices that good soil use indicates for that farm.

"The payments and practices for any farm will be what the county committee approves," said Smith. But, of course, the county committee must stay within the funds allotted to the county by the state. Money for soil conservation practices will be about the same as last year—300 million dollars for the nation as a whole.

Under the local control provided in the 1946 farm program, it is expected that the special needs of any particular farm can be provided for. Therefore, no payments for "special practices" are contemplated.

ANOTHER STURDY STAHMER PRODUCT

All-Purpose HAMILTON FERTILIZER DISTRIBUTOR



Immediate Delivery

Reasonably Priced!

Stahmer's Hamilton is engineered for long, hard service. Built of 11-gauge steel, welded throughout. Lumps are broken down and distribution is evened by a swivel baffle.

For Fertilizer or Lime

Easy to use . . . quickly and simply adjusted, it distributes to 8,000 pounds per acre, spreading 6 inches from the ground to guard against blowing. This extra heavy machine is the modern all-purpose fertilizer.

You'll be surprised at the reasonable price of Stahmer's Hamilton. You'll be pleased with its sturdy, dependable service.

Truman Talks About Labor

Farmers are concerned about drives by labor to raise the rate of pay per hour. President Truman, in a recent address, gave his explanation of the significance of the change being made from war-time wages to peace-time wages.

Farmers should be acquainted with the report, since the prices of many farm products rise or fall as total pay rolls in the cities rise or fall.

I WONDER how many of you know that many war workers have already had to take, or will soon have to take, a cut in their war-time pay of one-quarter or more.

Think of what such a decrease in your own income would mean to you and to your families.

How does it happen that pay envelopes are being cut so deeply? There are three reasons:

First, there is the present decrease in the number of hours of employment. During the past few years of war, millions of workers were asked to put in abnormally long hours of work.

Now that the need is past, the 40-hour week is being restored.

The change-over from a 48 to a 40-hour week means a decrease in the take-home pay, the amount in the pay envelope.

That decrease is much more than just the loss of eight hours' pay. Workers have been receiving time and a half for overtime—for all the hours they worked over 40.

That overtime pay is now gone in the change to a 40-hour week. The result has been a decrease of almost one-quarter in the workers' weekly pay.

Second, weekly pay is being cut because many jobs are being reclassified to lower-paying grades. The individual worker will feel these particularly when he changes from one job to another, starting at the bottom of the grade.

Third, the pay envelopes of workers will be thinner because millions of workers who were employed in the highly-paid war industries will now have to find jobs in lower-wage, peace-time employment.

These three factors added together mean a drastic cut in the take-home pay of millions of workers. If nothing is done to help the workers in this situation, millions of families will have to tighten their belts—and by several notches.

It has been estimated that, unless checked, the annual wage and salary bill in private industry will shrink by more than twenty billions of dollars.

That is not going to do anybody any good — labor, business, agriculture, or the general public.

The corner grocer is going to feel it, as well as the department store, the railroads, the theaters, and the gas stations—and all the farmers of the nation.

It is a sure road to wide unemployment.

This is what is known as deflation, and it is just as dangerous as inflation.

However, we must understand that we can not hope, with a reduced work week, to maintain now the same take-home pay for labor generally that it has had during the war.

There will have to be a drop. But the nation can not afford to have that drop too drastic.

Wage increases are therefore imperative — to cushion the shock to our workers, to sustain adequate purchasing power, and to raise the national income.

AUTO-LITE SPARK PLUGS
IGNITION ENGINEERED

"Ah did hear Paw te'l 'er the spark plugs needed a good cleanin'."

DIRTY PLUGS NEED "PLUG-CHEK" TOO!

Cleaning a spark plug often isn't enough. The plugs may be faulty, the wrong type or improperly gapped. Auto-Lite "Plug-Chek" inspection service is the quick and accurate way to find what corrections should be made to improve gas mileage up to 12%, according to tests made by the American Automobile Association.

Have your spark plugs inspected the "Plug-Chek" way by your friendly Auto-Lite dealer. But if new plugs are needed, ask for Auto-Lite spark plugs — they're ignition engineered.

Homemaking Department

Edited by ZOE MURPHY

I'VE never met a farm woman who didn't have a dream-house in the back part of her head. If she could build it exactly as she wanted it, this house would have all of the comfort, all of the convenience and all of the beauty a house could hold.

Unfortunately, not every one gets a chance to build a new house. Does that make a lot of women disappointed and unhappy? Not if I can judge by the letters we receive from farm women all over the country.

They simply get busy and work on the house they already have. They add a room here—put in a basement—add some new equipment, paint and new curtains. And the old house takes a face-lifting that puts it in the same class as the dream-house.

Now that the war is over, there's going to be a lot of this face-lifting all over the country. The restrictions on building and materials are removed, and there will be all kinds of new equipment on the market soon.

It's a good thing to remember to spend that money with just as much care as it was saved. Study the new equipment before you buy. Be sure that it meets your needs. Buy from a reliable company, and be sure you know how to use and care for what you buy.

Below are some letters from farm women, telling what they hope to do with part of their savings.—Z. R. M.

Mr. and Mrs. John Mattheis, of Cass county, Iowa, have a modern and well-equipped home. Mrs. Mattheis says that her work is easier and more pleasant.

"Don't Wake Me Up"

We've Waited So Long!

To the Editor: During the depression years, farm women didn't have the money to improve their homes. When things began to get better, it seemed every extra dollar on the

There's a washroom off the kitchen, where Mr. Mattheis and son Clare wash when they come from the field.

farm was needed to buy new stock, repair buildings, replace machinery or build new fences.

To farm women, it has seemed it has just been year after year of hard work, with not much coming our way, but now at last we feel free to make some of those home improvements for which we've waited so long.

First, we have already started digging a full basement under our house, which will have a nice laundry room, fruit room and recreation room.

We are putting in electricity right away, which will seem just plain wonderful. After that, we plan to put in running water, a water softener and a hot water heater.

In another year, we would like to build on a bathroom, enlarge our living room (at which time I'm hoping for a fireplace—which I've dreamed of having since I was about ten), and modernizing somewhat the outside appearance of our home.

Electricity! How it will brighten and cheer up our home—how it will shorten those hours of ironing and the daily cleaning—how it will bring me plenty of hot running water for dishes and milk equipment—also help carry the many pails of water to the chicken houses!

How grand it will be to have a bathroom—how much easier to keep the children neat and clean! And the furnace! Warm and nice all over the house—no heater to take up space in the living room—no fuel to carry in every day!

Am I dreaming? If I am, don't wake me up!—Mrs. Virgil York, Dallas County, Iowa.

White With Blue Shutters

To the Editor: The war is over, and we are living in that wonderful and glorious peace-time world once again. Of course, it will be some time before I can build my dream-house, but I hope to be able to give a few pointers and helpful hints that will help you in planning your home.

First, and most important, I have been buying war bonds, so I have my nest-egg salted away. I can just picture my dream-home. White with blue shutters; the windows must be near the corners, thus giving me more wall space, and the easiest chairs won't have to be placed back in the corners.

Of course, we will have electricity and running water, and a bathroom on the first floor. No little muddy tracks on the stairs to an upper bathroom.

I'll have built-in cupboards in my kitchen along one wall, divided in the middle by a small window over a built-in sink, with a bottom cupboard for useful objects. On either side of the window, fastened to the cupboard, will be full-length corner what-not shelves for plants or bric-a-brac.

A beautiful sun porch to the south for relaxation, with radio, a stand of good magazines and books, and furnished with some of the new wooden unpainted porch furniture. Mine will be finished in canary yellow and black.

Another wonderful idea is to have your sewing machine enclosed in a cupboard effect, to keep it free from dust. The top of this cupboard will be a nice place to keep vases and candles for decorative purposes. Over this have an open-shelved chest or an old kitchen cabinet top, with scalloped openings cut in it. Your trinkets or heirlooms can be kept here. It makes a nice piece of furniture and serves a triple duty.—Mrs. Dale D. Dundas, Kossuth County, Iowa.

Stove—Sink—Freezer

Dear Editor: Now that the war is over, we intend to add an electric mixer, an electric stove and a sink unit with running water in our kitchen. We are also considering a frozen food storage unit.

The mixer we have chosen is a well-known appliance that will soon be back on the market. Several of our friends have this brand and highly praise it.

Since our kitchen is small, and we intend to keep our cook stove, we think we will buy one of the small electric stoves that have the usual amount of space for cooking, but less table top. We want deep-well cooker with an electric oven in it, to lessen the heat in the kitchen in summer. We favor a small-size model.

We haven't as yet decided whether to purchase one of the ready-built metal sink units or to have one built as soon as suitable lumber is obtainable.

As yet, we have only discussed the frozen food storage unit. If the cost of operation compares favorably with the saving realized thru fewer trips to and from the locker, plus the annual locker rent, we may consider purchasing one. We favor one of the upright units, which allows you to find the food you want quite easily.—Mrs. Harry Coleman, Mahaska County, Iowa.

Fresh Sausage in Summer

To the Editor: The thing I want most is a home freezing unit. I want it to be large with plenty of shelf space, and well lighted. This would save food and time. Many times, food left-overs would be very welcome in a week from the time of cooking.

Many trips to town could be saved by the home freezing unit. Also, we would be able to have fresh fruits and vegetables the year around, with fried chicken for Christmas and fresh sausage for harvest hands. — Mrs. Hollis L. Fenton, Boone County, Missouri.

Joy in Things to Come

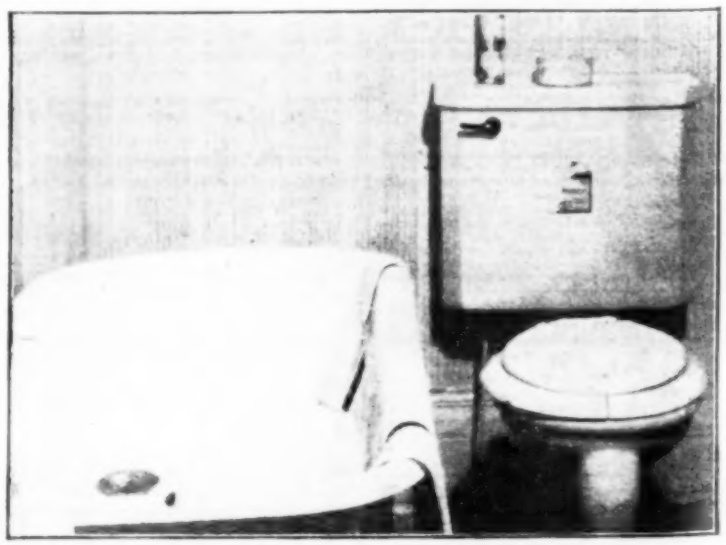
Dear Editor: My post-war plans? Well, they are many, and who knows if they'll pan out or not? But it does not cost anything to dream.

First, a new stove. One that uses bottled gas, and with a well-insulated oven. After years of struggling with ovens whose temperatures continually fluctuate, it would be pure heaven to have one that could be set for a certain temperature and stay there.

Second, new room furnishings for a 'teen-age boy who has sometimes felt that only cast-off furniture went into his room. There will be a new single bed with box springs and first-class mattress, and there will be a chest of drawers and a dresser to match. The wallpaper and curtains will be suitable for a boy's room.

Third, new wallpaper and curtains for the whole house, instead of the ones we've been making do while money went into bonds to make our post-war dreams come true.

Just savoring the joy of things to come makes life more interesting. Anticipation is part of the sauce of realization. — Mrs. Blanche Pease, Holt County, Nebraska.



By partitioning off a part of an upstairs bedroom, a comfortable bathroom was provided.

But George—they say it's Good to the Last Drop!

GRACIE—*See, George—there's nothing to it! You just float through the air with the greatest of ease.*

GEORGE—*I still think there must be an easier way of getting to the NBC studio every week than arriving by parachute.*

GRACIE—*Oh George—don't be an old stick-in-the-mud. Here we've got a great new radio show—and a brand-new sponsor like Maxwell House Coffee—and you want to go back to doing things the same old way. Anyhow, don't you want folks to know?*

GEORGE—*Know what?*

GRACIE—*That Maxwell House Coffee gives us that on-top-of-the-world feeling!*

GEORGE—*Sure, sure—but after all, millions of other people feel that way too—and they don't go flying around in parachutes. Why, Maxwell House Coffee is bought and enjoyed by more people than any other brand of coffee in the world!*

GRACIE—*Yes—isn't it wonderful, George? Just think of all those millions of people sitting by the radio every Thursday night—laughing at me and sipping Maxwell House Coffee! I can hear it now . . . laugh, laugh . . . sip, sip . . . laugh, laugh . . . sip, sip . . .*

GEORGE—*Laughing at you, eh? Where do my lines come in?*

GRACIE—*On the sip, sip, George! It's Maxwell House Coffee Time!*

A Product of General Foods

IT'S MAXWELL HOUSE COFFEE TIME . . .

with GEORGE BURNS and GRACIE ALLEN

GREAT NEW SHOW ON 137 STATIONS OF THE NBC NETWORK—EVERY THURSDAY NIGHT!

A great coffee brings you two of America's greatest comedians . . . so get set for enjoyment. Pour yourself a cup of Maxwell House, and tune in for a half-hour of non-stop laughs. See your local paper for time and station.

BACK FROM WAR...

In U. S. Army Field Kitchens overseas, where baking speed, baking quality and keeping quality of the yeast are all equally important, Fleischmann's Fast Rising Dry Yeast was used almost exclusively in turning out fine American bread for our fighting men.

TO YOUR KITCHEN

Now—honorably discharged—Fleischmann's Fast Rising Dry Yeast is back to serve in your kitchen as it served in field kitchens abroad. IF YOU BAKE AT HOME—Fleischmann's Fast Rising Dry Yeast will help you make *better* bread in just a few hours.

FLEISCHMANN'S *fast rising* DRY YEAST

As easy-to-use . . . as fast acting as ever, Fleischmann's Fast Rising stays fresh for weeks on your pantry shelf—ready for quick use. Ask for Fleischmann's Fast Rising Dry Yeast. At your grocer's.

Grandma Was Right

I HAD just taken the baked rhubarb from the oven when Clara came in. "M-m!" she sniffed. "Doesn't that smell delicious? You know, my grandmother cooked rhubarb that way more than thirty years ago, and here we are just learning how it's done."

I got to thinking about it after Clara had gone—of the many, many things we are finding out—things that Grandmother just seemed to have found out all by herself.

First, there were those practical things, such as learning to milk a cow, shingle the milk-house roof, build a shelf in the basement, put a new seat in a chair.

Living fifty miles from town, and raising a family, made her a very practical person. Tho demand was great, the supply of goods available was very small. She grew the wool, carded it, spun it into yarn, which later she made into jeans and coats.

From peddlers who occasionally tramped thru the country, she bought a bolt or two of calico that went into dresses for her and her daughters for Sunday or for picnic days.

Now, tho her granddaughter and great-granddaughter don't have to weave the cloth, they have had to make over, make do, or use their ingenuity to cope with supply and demand.

From printed feed sacks have come curtains, dresses and aprons, bedspreads, toys for the children, quilts and pajamas, and one ingenious girl made a rug for the bedroom.

Every scrap of cloth was saved back in Grandma's time. What was not used in garments went into pillow tops and quilt blocks.

War shortages have made us appreciate the simple arts all over again. The other day, I saw a set of bathroom curtains made from the crash muslin sacks the salt came in. For decoration, the woman had crocheted an edge of contrasting color.

Modern girls are learning to make butter out of cream; soap out of cracklings; smoke ham at home, and cook salt pork. Grandmother beat out her own path; Great-granddaughter is learning in a different way.

Sugar was always scarce in Grandmother's house, so she learned to use molasses, and grew sugar cane. In the fall, she made the molasses and invited the neighbors to bring their cooked pumpkin and cook it in the "skimmins"—that part of the molasses that was left in the big vat after the other was finished off.

Then, she knew her vitamins. Oh, she didn't know them as such. All of the A, B, C's she knew anything about came from a book of reading or spelling; but back in her mind she knew that vegetables made for health. Vegetables grown in the rich soil and simmered in the iron kettle, meant health for the entire family.

Then she knew the dignity of honest toil. In all the years I knew Grandma I never heard her say: "I know I worked hard, and I hope my children never have to work as hard as I had to." No, she knew that there is a peculiar satisfaction in doing a hard job and doing it well.

Grandma knew, too, the art of cooperation. A large family, a small house, took patience and long-suffering, and surely none knew better than she just how much it took.

The children were taught to work, to hustle thru their tasks, for there might be a picnic, or a walk to the neighbor's, when it was done.

Education from books was dearly bought as youngsters walked long distances with few conveniences; yet those Johnnies and Susies of yester-year became giants in education and resourcefulness.

Lastly, Grandmother learned to dispel loneliness by keeping busy. Separated long miles from her loved ones, she took a hand in everything about the home, not only to learn but to fill her mind with youthful thoughts. No time to feel sorry or abused.

Just so, our modern girl. Separated not only by long distances, but by an ocean as well, from her lover or husband, she gets a job, pitches in, and succeeds admirably in keeping cheerful.

With little complaining, we see her living one day at a time, knowing that eventually Bill will be home, and together they will begin all over again. It's taking the same kind of courage these days that it took when Grandmother beat out her own path in the wilderness back in 1870.—Nell F. O'Neil, Clay County, Iowa.

COUNTRY AIR

By ELIZABETH C. WHERRY

"WHAT'S it like at home now that peace has come?" Corporal Wherry continually asks. It's been hard to say. In general, there seems to be a lightness about every one and an acceleration of speed in living.

¶ ¶ ¶

Cars from Illinois always had gone around us on the road. Even when the whole nation was tire-conscious at 35 miles an hour, Illinois autos could somehow neatly dispatch their 35 m. p. h. faster than I could. Now we drive 50 again. Illinois cars still go around us.

¶ ¶ ¶

This general lightness becomes more tangible. So does the acceleration in living. Every organization or activity dropped in the war years is being renewed.

¶ ¶ ¶

Board meetings come oftener. Committees are appointed to renew or complete pre-war projects. Many war-time activities continue. Rally days, pep meetings, and refresher courses range from Sunday schools to hog cholera.

¶ ¶ ¶

A rash of parties is breaking out in town and country. People are hungry for fishing trips and family reunions, or for that delayed drive to Aunt Amanda's. They find any excuse to get out and go, from visiting the new baby in the hospital to looking over dairy barns four counties away.

¶ ¶ ¶

It's all very understandable. The latch has sprung; the lid is off. But one wonders sometimes if this might not be a good time to pause and take a little stock of which activities are deadwood and which are of necessity live growth.

¶ ¶ ¶

Men popping off with bad hearts in their fifties make you say: "Were all those community jobs necessary?" The crying need for everything from road gravel to paint for the parsonage calls for many conferences, and we feel that everything must be renewed at once.

¶ ¶ ¶

"I'm going to welcome a good road-blocking blizzard early this winter," gasped one woman who frantically splits her weeks between home and family and the public jobs she handles so well.

¶ ¶ ¶

While some people sit—just sit!

¶ ¶ ¶

Our new home gives us a full view of one of the country's busiest railroads. Something like 70 trains run thru here daily. At first, we were concerned lest our sleep, our conversation and our peace and quiet (such of these as we manage to achieve) would be sadly disturbed.

To be sure, our first few nights here were accompanied by shrieking whistles and mighty rumblings. Certain trains seemed to leave the track and rip across the intervening vacant lots to whistle greetings under our very windows.

¶ ¶ ¶

After they got better acquainted, they confined themselves and their whistles to the right-of-way provided for them. Now, if I waken in the night, and no train is passing, I wonder if maybe I have passed away and there are no busy trains—or if our railroad is slipping.

¶ ¶ ¶

If a train is passing, I listen appreciatively and snuggle down again, knowing that the world's business is properly on the move.

¶ ¶ ¶

My neighbor, long accustomed to the trains, says when you occasionally can't sleep at night because you have overeaten, or something, you count the trains, and wonder how on earth you can sleep thru all the other nights.

¶ ¶ ¶

The whole town looks upon the trains with an almost proprietary interest, and refers to them affectionately as just that—"The Trains."

¶ ¶ ¶

Freight trains have always held a particular fascination for me. Such endless variety! Stock cars with cattle staring dumbly at the flying landscape, as they sway their way to the slaughter house. Feeder stock for the corn belt. Mixed loads.

¶ ¶ ¶

Double-deckers with fat hogs destined for markets where human beings not only kill them, but fight amongst themselves over the carcasses all the way from OPA and ceiling prices, thru feeder-packer squabbles to housewife-butcher wrangles over points, weight and quality. Empties roaring westward better hurry. There's a lot of soft corn waiting for decently priced cattle to eat.

¶ ¶ ¶

The yellow refrigerator cars carry an air of self-importance with a California smirk. Coal gondolas—well, I genuflect to them, considering our coal bin!

¶ ¶ ¶

I love the big flatcars with unidentified machines upon them—so big they sometimes overlap onto an extra car at both ends. My favorite freights are the scurrying deisel-engined trains. One with four sleek engines whisked 125 cars past my gloating eyes one day.

¶ ¶ ¶

At night, these long, significant trains engender all sorts of long, long thoughts of labor—the men who made them, the men who loaded them, the men who produced the loads.

¶ ¶ ¶

And thoughts of money. The money that pays for the labor, the loads, the engines and the tracks. And thoughts of agriculutre, who must feed these men, and to whom the buying power of both groups is necessary.

¶ ¶ ¶

What are we fussing about? We've got to get along. We do get so balled up in this old world of ours!

¶ ¶ ¶

Most of all do I love the long yellow stream-liners, that whistle so hoarsely and arrogantly, tear out of the landscape on one side to disappear at the other in an unbelievably brief moment of time. Sometimes their frantic haste reminds me of nothing so much as a long yellow worm with a load of DDT on its tail.

SAVERS OF TIME AND LABOR

Every homemaker is interested in saving time and steps around the house as well as out-of-doors.

If you have some special ideas on time and labor savers, won't you tell us about them? Your ideas may help others.

Write a short letter to the Homemaking Department of Wallaces' Farmer and Iowa Homestead. We will pay one dollar for every letter published. Get your letters in by December 1.

Lady—
PAMPER Your Husband

And Look For These
2 Exciting Things

1. HE GETS—Surprising New Enjoyment
Not Just Another Brand But A
BETTER KIND OF COFFEE

LADY—this is coffee *any* husband will love. It's a better *kind* of coffee—the choicest mountain grown coffees, blended and processed as only Folger knows how. Indeed, so different—so distinctive is the Folger Flavor, it is known as *the coffee with the flavor advantage*. So, lady, pamper your husband tomorrow with Folger's Coffee,—and when you try it, look for these two exciting things in the *Folger Flavor Advantage*—(1) a surprising new enjoyment in coffee and (2) the surprising economy of quality.

2. SHE GETS—Surprising New Economy

Flavor So Rich You Are Urged to
TRY USING 1/4 LESS
Coffee Per Cup

FOLGER'S COFFEE
THE COFFEE WITH THE FLAVOR ADVANTAGE

"*Starting the cure at the bone* MAKES SENSE TO ME"

OF course it does. It's in the bone area that meat is most likely to develop bone-taint, off-flavor, souring.

So what's more reasonable than *starting* the cure in the bone area, forestalling trouble before it ever gets a chance to start . . . as you do with the Morton Cure.

Morton's Tender-Quick dissolved in water makes a fast-acting curing pickle. Pumping into the meat along the bones, this immediately starts the cure *inside* — helps put your meat on the *safe* side quickly. Then rub the outside with Morton's Sugar-Cure. This sugar curing salt strikes in, curing towards the center, giving your hams, shoulders, and bacon an old-fashioned, sweet smoke flavor.

Try this safer, surer, more positive method this year and . . . when you take down the first ham or bacon of the season's cure, you'll agree that you've got the best-tasting meat you ever had. Months later, when you take down the last one, you'll say it's been the best keeping as well. That's why each year more than a million farm families entrust their season's meat to Morton's Tender-Quick and Morton's Sugar-Cure.

FIRST . . . Dissolve Morton's Tender-Quick in water and pump into hams and shoulders along the bones. This rich, fast-acting curing-pickle starts curing INSIDE . . . helps prevent bone-taint, off-flavor, under-cured spots, giving a safer, surer, more uniform cure.

THEN . . . Rub with Morton's Sugar-Cure which strikes in, curing from OUTSIDE toward the center . . . giving you a thorough cure, long keeping quality, and the rich, wood-smoke flavor you like.

Cure meat the safer, surer MORTON WAY

Finest Home-Curing Book ever published . . . more than 100 pages, 10 cents Postpaid. Over 200 pictures, charts, diagrams — complete directions on how to butcher, cure, make sausage, Canadian bacon, corned beef, and other meat specialties. No other book like it! Send 10¢ in coin today.

MORTON SALT COMPANY
CHICAGO 4, ILLINOIS

Margaret Noll, of Ida county, Iowa, wearing her corn husking "ensemble"—a scarf, a man's old shirt, and a pair of pants.

"*When I Husk Corn*"

THERE are times during the year when my sympathies for the men are so aroused I do something about it.

When there is only one man to milk eight or nine cows, or when the tractor runs from dawn until late at night with only one operator, I long to help. But at corn-picking time, I "go out."

I drop the afternoon clubs, the unnecessary sewing, the fancy cooking, and join the harvesters. If it is a backache they get, I'll have one, too. If it is tough husking or muddy underfoot, I won't have to imagine—I'll know how the day went.

I go out the first day of picking. The weather is usually warm, but it is a choice between sweat or chill. One will do both before the snow covers the field.

I like to take a team alone, but that is not easily done these days, when corn-picking is about the only time of year an extra team is needed. Horseflesh is at a minimum on most farms. The picking I do wouldn't make up for feeding an extra team all year.

It is generally two to a wagon that we go, and we do have and need an extra wagon that way. Or go in at mid-afternoon to unload. One is never sure just what he has picked, or how many bushels extra left the field because of one's own personal effort.

I'd rather pick alone, because two rows are more handy to pick than one and one-half. One can complete every motion without interfering with the partner or getting in his way. One can really work out a pattern or habit of going from one hill to the next that is a step-saver on two rows.

Picking alone, tho, has the disadvantage of sole responsibility for the team. If the lines are tight, the team is slow; if they are loose, the team gets ahead. I've had lines catch under the neckyoke, causing the team to start off row. A tug hits a wheel. It is one constant urging, watching, calling, with a team!

One season, I had breakage for three days running—a single-tree the first two days, a double-tree the next. I sure caught it! One would think she was the only one who ever broke anything! I felt badly until I discovered the trees had lain out in weather for 20 years.

A horse for once gets his stomach full, and drowses. I notice Molly's stand-up nap. "Is she sick? She certainly acts dumpy." My imagination often gets overworked, but so far no horse has dropped dead pulling one of my loads.

I'm never fully accepted at corn picking. It is "man work." Remarks such as "the All-American Drawback" or "Handicap" reach my ears.

Still, picking is the best excuse of the year to be outdoors. One half-day doesn't amount to so much. When it is 30 bushels for 20 to 25 afternoons, it really counts up.

The field togs deserve a word. I'm in pants only a few times during the year. It doesn't pay to buy a pair just for picking. My ensemble is cast-offs: A man's old undershirt (a brassiere doesn't keep off enough dirt, and certainly isn't warm), a pajama top, or a man's shrunken shirt.

Then there are well-patched overalls, a sunbonnet (if it is warm) or a heavy scarf (light-colored enough not to scare horses), an old sweater or ragged jacket (for wearing back and forth), galoshes to overcome the handicap of low shoes, and safety pins!

Of the pins, the minimum is about six—two to hold shoulder straps in place, two to pin up stocking sleeve protectors, two to tighten that man-size collar—not to mention what one may need for missing buttons or to secure the head rigging.

It is no picture of safety such as the accident prevention people put out. There is no use in prevarication. That's what I wear—and have for years.

Many of the older women who pick insist they can't get along without the old-fashioned peg. Give me the man-style hook. Of course, it needs taking in at the wrist band.

With regret, we see the passing of hand-picking for both sexes. The war made a situation where there just wasn't harvest help to go around. Machine replacement was quickened. Machines are here to stay.

In wet years, extra help is needed to sort out moldy or soft corn—and the women pitch in. The feminine hand saves the men a lot of climbing in and out of wagons or cribs, in order to attend to the power. There's a lot women can do, no matter how the harvest.—Margaret Noll, Ida County, Iowa.

Just What You Want

No. 4531—Her favorite dolly rates this new outfit, complete inside and out. For dolls 12, 14, 16, 18, 20 and 22 inches.

No. 4586—Wear your heart on the pockets of this complete-coverage apron. Sizes, small (32-34), medium (36-38), large, (40-42).

No. 9247—Designed especially for figures 34 to 46. Waist and shoulder gathers are extremely flattering details. Sizes 34 to 46.

No. 9364—Undershirts and shorts for the comfort of your men-folks. Men's sizes, 32 to 44; boys', 4 to 16.

No. 4937—Eye-catching frock and hat; embroidered yoke, cuffs and hat for contrast. Junior miss sizes, 11 to 17, 10 to 18.

No. 4775—An adorable toddler's outfit. Button-it-herself dress, coat, bonnet and slip—all in one package. Sizes 1 to 5.

Patterns may be secured for 16 cents each, in coin or stamps (coin preferred). Send your orders to the Pattern Department, Wallaces' Farmer and Iowa Homestead, Des Moines, Iowa. There are still delays in mailing, so allow plenty of time for your order to reach you.

You Don't KNEAD the Dough!

EASY, FAST, FUN TO BAKE

NOW! With this exciting ANN PILLSBURY time-saver you can make and bake specialty breads faster and easier . . . rolls, coffee cakes, other baked beauties that are golden crusted, tender, *good*. And remember, *whatever* and *whenever* you bake—you bake your *best* with Pillsbury's Best!

Ann Pillsbury's "NO-KNEAD" TRIPLE TREATS

Makes 24 Lemon Tea Drops, 1 Cinnamon Loaf and 18 Dinner Rolls

BASIC DOUGH

Soften ..... 3 packages yeast, compressed or dry granular, in 3 cups lukewarm water.
Blend in ..... 2 tablespoons salt
¼ cup sugar or light corn syrup
½ cup melted shortening
2 eggs
Add gradually 9 cups sifted PILLSBURY'S BEST Enriched FLOUR; mix until dough is well-blended and soft.
Use ..... one-third of dough for Lemon Tea Drops and chill remaining dough for Cinnamon Loaf and Dinner Rolls.

LEMON TEA DROPS

Use ..... ⅓ unchilled basic dough to make 24 small tea muffins. Fill greased, 2-inch muffin pans ⅔ full.
Combine ... ½ cup sugar
2 teaspoons lemon juice
2 tablespoons grated lemon rind
Sprinkle ..... about 1 teaspoonful over each muffin.
Let rise ..... in warm place (80° to 85° F.) until light, about 45 minutes.
Bake ..... at 375° F. for 20 to 25 minutes.

CINNAMON LOAF

Use ..... ⅓ chilled basic dough to make 9x4x3-inch loaf. Roll dough to 16x8-inch rectangle.
Sprinkle with ¼ cup brown sugar
1 teaspoon cinnamon
Roll ..... as for jelly roll, starting with 8-inch edge; seal edges and place in greased, 9x4x3-inch pan.
Let rise ..... in warm place (80° to 85° F.) until double in bulk, about 2 hours.
Bake ..... at 375° F. for 1 hour.

DINNER ROLLS

Use ..... ⅓ chilled basic dough to make 18 dinner rolls. Mold into crescents or any desired shape.
Let rise ..... in warm place (80° to 85° F.) until double in bulk, about 2 hours.
Bake ..... at 425° F. for 20 minutes.

What the ex-service man does when he comes back depends partly on his girl—if he has one. A young fellow, with no immediate plans for marriage, will be more apt to take a job as a hired man or go to college. If married, or soon to be married, a man may prefer to buy or rent. (Photo by Williams.)

Back to the Farm?

WHAT the returned service man wants to do is something nobody—not even himself—is sure about.

But his folks are bound to guess. And to hope.

When the Wallace-Homestead poll interviewed several hundred farm people, on their farms, about postwar plans for ex-service men, it was clear that hope of keeping the boys on the farm influenced many votes.

When we asked: "If your boy left the farm to go in the armed services, when he comes back what would you expect him to do?" we found that only 8 per cent expected the boy would get a job in town.

On the basis of past history, we could expect about half the farm boys to get town jobs. But their folks, at least, want to keep them home.

Will the veteran buy a farm? Only 12 per cent thought he might. Owner families naturally favored this plan more than tenant families. The owner families were more likely to have the money to help the boy buy.

Will he rent for himself? This was the favored response with many. A total of 24 per cent thought this the logical course.

Will he work out on a farm? Only 5 per cent approved this. Some well-off familes thought it would be fine experience. Some poorer families thought it was about the only chance the boy would have.

Will he work on the home place? The old folks liked this—maybe better than the boy will. But 17 per cent approved.

Men and women voted about the same way on these points. Tenant families thought more of their boys would have to go to town for jobs, would have to work out. Fewer tenant families than owners saw much chance for buying land or working at home.

The big surprise in the poll was the number who want their boys to take a year or two of college at the government's expense.

A total of 34 per cent hoped the boy would go to college. Men and women, owners and tenants, agreed pretty well on this.

Some wondered if the agricultural college would give the boys what they wanted in a one or two-year course. Others were not sure the boys would feel as strongly about going to college as their parents did.

Not all of the college courses recommended were agricultural. A few specified that the boys should take other college work. But the bulk of the comments indicated that an agricultural college would get thousands of farm ex-service men—if the college could make a one or two-year course seem practical and attractive enough.

Two farm women in Linn county wanted their boys to go to college, so as to get away from the farm. And one in Clinton county wondered if college really helped a boy at farming.

Some farm people had fears that the army had already spoiled the boys for farm work. Here are two comments from Johnson county:

"Mother and I hope our boy will come home and help here until he starts farming for himself. I'm a little worried now for fear they'll keep

WHAT WILL THE BOY DO?

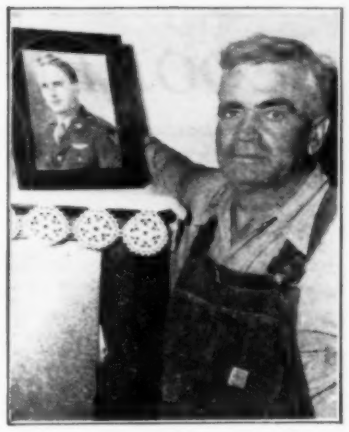
Nobody knows the plans of the ex-service man but himself. But older folks at home often have clues—in letters and talks—as to what his plans may be. So, we asked a cross-section of home folks this question:

"If your boy left the farm to go in the armed services, when he comes back would you expect that he—

"A. Will buy a farm of his own;
"B. Start renting for himself;
"C. Work on your farm;
"D. Work on somebody else's farm;
"E. Get a job in town;
"F. Go to college or training school?"

Read this article to see how the answers check with the plans of the ex-service men you know.

The son of this farm woman, from Carroll county, Iowa, was with the American forces over in India for three years. She thinks the boy will probably start by renting a farm for himself.



This boy, from Greene county, Iowa, whose picture is shown with his father, had just finished high school when he went into the service. He may go to college when he gets back home.

him in the service so long he'll get discouraged and won't want to farm when he gets out."

"A lot of boys won't come back to the farm. Army life in the states has got them used to easy hours. And on the farm, it has to be long hours if you want to succeed."

An Ida county woman declared: "You have to be trained, even at farming, now." She was for college for ex-service men.

A Clayton county farmer echoed a majority sentiment when he said: "I'd advise a boy returning to the farm to rent and not to buy. Prices of farms are too high now."

From Cerro Gordo county came this comment: "I hope every boy who can will take advantage of the opportunity to go to school. It will give him a chance to get his bearings and give him a better start in life."

In Palo Alto county, a farm woman advised: "Those boys who want an education should certainly grab this opportunity. I hope lots of them go to college."

A farmer in Hardin county favored college, but wasn't sure whether the boy could get what he needed there.

"Too much of the work is laid out for boys who'll be there four years," he said. "They need to fix things up so a boy can go for one or two years and still get a well balanced course. They ought to teach more about markets, too, and what makes farm income go up and down."

A Tama county farmer summed up the attitude of Iowa farm people by saying:

"When the service men come home, we'd better do something for them—start them farming or give them good wages. Most of us are ready to sit back and give these boys a chance at things.

"We couldn't go to war in their place, and if they hadn't gone, we wouldn't have any farms now. Let's do for the boys."

Easy on Your Sugar

CRANBERRIES are the best of our winter fruits, and they are back on the market in bigger quantities than last year. They are, as always, the housewife's friend, for they are easy to cook and can be served in so many different ways.

To save your sugar, you can cook cranberries with syrup, making many desserts and salads that are easy on the sugar bowl. Here are a few new and interesting ideas and recipes you may want to try out.

Molded Strained Cranberries

4 cups of fresh cranberries
1¾ cups of water
1 cup of corn syrup, dark or white, 1 cup of maple syrup or ½ cup of honey
1 cup of sugar

Cook cranberries in water until all the skins pop open. Strain thru fine sieve, add syrup and sugar, and blend. Boil rapidly for about three minutes. Skim and pour into one large or individual molds. Chill until firm. Makes one quart of molded sauce.

Cranberry-Orange Relish

2 cups of fresh cranberries
1 orange
½ cup of sugar
½ cup corn syrup, dark or white, 1 cup of maple syrup or ½ cup of honey

Put cranberries thru food chopper. Quarter a whole orange, remove the seeds and put thru the chopper. Add sugar and mix well. Chill in refrigerator a few hours before serving. Makes two cups of relish. This sauce will keep well in the refrigerator for several weeks. For extra zip, add one-half lemon, with seeds removed; put thru food chopper with cranberries and orange.

Cranberry Cole Slaw

2 cups of shredded cabbage, crisped and dried
1 tablespoon of minced onion
½ cup of diced celery
1 cup of cranberry-orange relish, well drained
1 teaspoon of salt
¼ cup of vinegar

Mix ingredients together lightly with a fork. Chill in refrigerator for one hour. Serve garnished with lettuce as a salad or plain as a relish, with the main dish of the meal.

Cranberry Apple Relish

4 cups of fresh cranberries
2 apples, pared and cored
2 oranges
1 lemon
1 cup of sugar
1 cup of corn syrup, dark or white, 1 cup of maple syrup or ½ cup of honey

Put cranberries and apples thru the food chopper. Quarter whole oranges and lemon, remove seeds, and put thru the chopper. Add sugar and syrup and blend. Chill in the refrigerator a few hours before serving. Makes one and one-half quarts of relish. This sauce will keep well in the refrigerator for several weeks' time.

Cranberry Tricks

Use tall sherbets for this good-looking dessert: Cut molded strained cranberries in small cubes; alternate layers of cubed cranberry with layers of fresh fruit in season. Canned and stewed fruit is also very good.

Hot, crunchy cinnamon toast, with a deep bowl of cranberry-apple relish, a big cup of strong, black coffee, make perfect refreshments for that long winter evening at home.

PATENTED DOWN-DRAFT FLUES

. . . feed fresh air over the fire, producing improved combustion which converts escaping gases into EXTRA heat. RESULT: More heat from less fuel, plus a cleaner fire.

. . . WE'LL SURELY BE COMFORTABLE THIS WINTER!

There is nothing "theoretical" about this new smoke-burning feature in Monarch Circulators. It really works. It definitely gets more heat out of every shovel of coal . . . holds room temperature at a more comfortable level . . . and (thanks to the front feed) keeps walls and curtains clean. See your dealer at once for one of these new Monarch Super-heaters . . . and enjoy real winter comfort.

NOW AVAILABLE

*CONCEAL YOUR SMOKE PIPE WITH A Monarch RANGE

The new all-porcelain Monarch Coal-Wood range not only fits harmoniously into the most ultra-modern kitchen — but even the smoke pipe can be neatly and cleverly concealed. It's just a simple trick, and Monarch has prepared instructions to show you exactly how to do it. Coupon below will bring complete plans to you. If you're thinking about remodeling your kitchen, request a copy of "Kitchen Plans" which is full of practical ideas.
Monarch Coal-Wood Ranges are available. See your dealer.

THESE MOTHER'S BEST

Parkerhouse Rolls

Will "Steal the Show" at ANY Meal!

There will be "encores aplenty" when you treat the family to plump, golden-brown Parkerhouse Rolls made the Mother's Best way. Enriched Mother's Best Flour, you see, is specially milled for ALL your home baking, and tested REPEATEDLY with home recipes. For best results, use vitamin-enriched Mother's Best in ALL your baking. Sold on positive money-back guarantee. Try a sack soon.

PARKERHOUSE ROLLS

½ cup lukewarm water
1 cake compressed yeast
1 cup milk
4 tablespoons shortening
1½ teaspoons salt
3 tablespoons sugar
About 5½ cups MOTHER'S BEST

Soften yeast in lukewarm water. Scald milk, add shortening, salt and sugar. Stir smooth. When lukewarm, add yeast and about half the flour. Beat smooth. Stir in a cup more flour; turn onto remaining flour. Knead in enough flour to make dough easy to handle. Knead thoroughly. Place in greased bowl, grease top. Let rise until light. Knead on unfloured board, roll thin, cover with cloth, let rise. Cut with biscuit cutter, brush with melted fat, crease with knife, fold over and press together. Place on greased baking sheet. Let rise. Bake at 400 F. about 15 minutes.

And no wonder, for the new Red Star *Dry* Yeast is so *handy*, so *easy to use*. Unlike old-style cake yeasts, Red Star *Dry* Yeast is *granulated* . . . comes in a small envelope. It *stays fresh* week after week without refrigeration.

Try it *yourself!* See what baking wonders it will work for *you!* You'll be amazed at how *quick* and *easy* it is. Ask your grocer for the new Red Star *Dry* Yeast *today*.

Try RED STAR DRY YEAST

COOKERY CORNER

Old-Fashioned Pumpkin Pie

1½ cups of cooked pumpkin fresh or canned
1 cup of rich milk
¾ cup of sugar
2 tablespoons of molasses or sorghum
¼ teaspoon of salt
2 eggs (beaten)
1 tablespoon of butter
1 teaspoon of pumpkin pie spices or ¼ teaspoon of nutmeg and ¼ teaspoon of cinnamon.

Combine ingredients, mixing well to give a smooth texture. Pour into a nine-inch pastry-lined pie dish and bake in a moderate oven for about an hour, or until a knife inserted comes out clean. — Mrs. Clark Watkins, Poweshiek County, Iowa.

Honeyed Apples

6 large baking apples
½ cup of honey
½ cup of orange juice
6 whole cloves
6 walnut meats
Sugar

Wash, pare and core apples. Place in baking pan; fill centers with honey and orange juice; place a clove and nutmeat in each apple; rub with butter and sprinkle with sugar. Cover and bake in a 400-degree oven for 45 minutes. Remove cover and bake 15 minutes longer.—Mrs. L. J. Daughlin, Scottsbluff County, Nebraska.

Smothered Pork Chops

(A One-Dish Meal)

4 select pork chops, cut about 1½ inches thick
1 small sweet white onion, peeled and sliced thin
2 medium sized potatoes and 1 fresh carrot, peeled and sliced or diced
1 cup of finely-cut fresh celery
2½ cups of peeled tomatoes, fresh or canned, including liquid
Salt, pepper and flour

Trim fat from chops, cut into bits, and fry out slowly in deep, heavy skillet or Dutch oven, being careful not to burn. Add onion slices and simmer till tender, stirring occasionally. Remove bits of fat and onion slices and discard. Heat fat in skillet to bubbling, adding a little extra clear fat if necessary to brown chops. Sprinkle chops with salt and pepper and dredge with flour, then brown evenly on both sides in the hot fat. Plend remaining vegetables, add salt and pepper to season, and pour over chops. Add a little hot water if needed to cover chops well. Bring rapidly to a boil and allow to boil about two minutes, then lower heat to medium simmer, cover, and allow to simmer steadily about 2½ hours, or till the chops are tender when pierced. Serve hot as a one-dish meal. Serves four. To serve more, add extra chops and more vegetables. The proportions need not be exact.—Mrs. E. R. Douglass, Madison County, Indiana.

Sugarless Holiday Fruit Cake

1¼ cups of dark syrup or honey
½ cup of fat, melted
2 eggs
1 box of vanilla pudding
½ teaspoon of salt
2 cups of flour
½ teaspoon of soda
1 teaspoon of combination baking powder
¾ cup of sour milk (thick) or buttermilk
1 cup of currants
1 cup of raisins
½ cup of mixed peel
½ cup of nutmeats
1 teaspoon of cinnamon
1 teaspoon of nutmeg
½ teaspoon of cloves

Mix flour, salt, soda, baking powder and spices. Cream fat and syrup, add eggs, beat well. Add pudding and vanilla. Add flour mixture and milk alternately. Beat well. Pour in tunnel pan and bake in a moderate oven (350 degrees F.) for one hour.—Mrs. Rudolph L. Lett, Benton County, Iowa.

Candied Sweet Potatoes

Sweet potatoes for six servings
1½ cups of honey
2 tablespoons of cornstarch
1½ cups of water
¼ teaspoon of salt
1 tablespoon of butter or other fat

Boil sweet potatoes until barely tender. Drain and remove skins. Cut in halves lengthwise and arrange in a buttered baking dish. Season with salt. Add some butter or other fat to the sweet potatoes, and pour the syrup over them. (Syrup is made by mixing ingredients given and cooking until clear.) Bake in a hot oven (460 degrees F.) until potatoes are brown.

Ox Joint Ragout With Parsley Dumplings

2 pounds of ox joints
Seasoned flour
3 tablespoons of meat drippings or lard
4 cups of boiling water
2 bouillon cubes
1½ teaspoons of dry mustard
2½ teaspoons of salt
4 white turnips, quartered
4 onions, halved
4 carrots, sliced
¼ cup of minced parsley
2 cups of dumpling dough

Dredge ox joints in seasoned flour. Heat drippings or lard; brown ox joints on all sides. Add water, boil

lon cubes, mustard and salt. Cover; simmer two hours. Add turnips, onions and carrots; simmer one hour longer, or until meat and vegetables are tender. Add parsley to dumpling dough; drop by spoonfuls on stew. Cover tightly; simmer 10 to 15 minutes without removing cover, or until dumplings are light and tender. Serves four to six.

Lemon Pudding Puff

(Serves six)

- ¾ cup of sugar
- ¼ cup of cornstarch
- 1 cup of boiling water
- ⅔ cup of corn syrup
- ¼ teaspoon of salt
- 3 eggs, separated
- 3 tablespoons of cold water
- ⅓ cup of lemon juice
- 1 tablespoon of lemon rind
- 1 tablespoon of butter

Mix sugar and cornstarch well. Stir in boiling water and add syrup and salt. Cook, stirring constantly, for about five minutes. Beat egg yolks slightly and add cold water. Gradually stir into hot mixture and cook another two minutes. Remove from fire; add lemon juice, grated rind and butter. Fold in stiffly beaten egg whites. Cool. Garnish with a bit of jelly.—Mrs. Glenn Grove, Keokuk County, Iowa.

Curried Eggs in Rice Ring

- 4 tablespoons of butter
- 4 tablespoons of flour
- 1 to 2 teaspoons of curry powder
- ½ teaspoon of salt
- 2 cups of milk
- 6 eggs, hard-cooked and sliced
- 1 green pepper, cut in strips
- Chutney and almonds cut into strips and toasted

Melt butter, add flour mixed with curry powder, mix to smoothness. Add salt and milk. Stir over low heat until rich and creamy. Arrange eggs and green pepper in center of rice ring. Pour curry sauce over top. Serve with side dishes of chutney, almonds cut into slivers and toasted, etc. Serves six.

Cabbage With Bacon Sauce

- 2 quarts of cabbage, chopped
- 1 teaspoon of salt
- 3 tablespoons of bacon fat
- 2 tablespoons of flour
- 1 cup of liquid drained from cabbage
- 1 cup of evaporated milk
- ½ pound of bacon, sliced
- Salt and pepper to taste

Trim cabbage, quarter and let it stand in cold water about 10 minutes. Drain and chop coarsely. Put in a heavy kettle with only enough water to prevent burning. Add salt, cover and boil rapidly until cabbage is just tender—about 10 minutes. Drain and save water for bacon sauce as follows: Fry bacon to a crisp, delicate brown; drain on absorbent paper; chop or break up; blend bacon fat and flour. When smooth and bubbling, add cabbage water and cook until thickened, stirring constantly. Add milk and continue cooking over boiling water until thickened. Add bacon bits and season to taste. When ready to serve, add drained cabbage. Serves six to eight.—Mrs. F. R. Fienup, St. Louis County, Missouri.

Fluffy Burnt Sugar Frosting

- 1 egg white, unbeaten
- 1 cup of white corn syrup
- 2 tablespoons of burnt brown sugar syrup

Combine in double boiler and beat till it stands in peaks. Very good!—Mrs. Rudolph L. Lett, Benton County, Iowa.

Jot Things Down

"WHAT on earth is that?" I had spied a slip of paper tacked to the inside of the cabinet door. It looked so important-like, I thought it might be a new recipe.

"That, my dear, is my 'Incidental List' for October and November—tho, of course, we can take care of its items any time there are spare moments. You'd be surprised how well it works."

"Incidental list? May I read it?"

"Of course—only that's my list. Yours would read much differently. My list includes things to be done about the house and farm that we'd like done before snow flies. Yours might be considerably different from mine."

But I had already begun:

"New panes in the storm sash. And paint sash.

"Fix screen in front door.

"Clean closet in north bedroom, and sort rags for rugs.

"Sharpen the knives.

"Trim the bushes near the house.

"Set a new post at the garden gate."

Here I had to stop. "There is something I've been wanting for two whole years," I sputtered; "for two whole years! Never can think of it only when I go thru it. Out of sight, out of mind."

Last summer, my hens got thru the gate because it wouldn't quite shut, and nearly ruined the tomatoes and cucumbers—but that didn't fix the post.

"Wash the windows in the poultry house."

"That's a new one." I still was sputtering. "Since when do we have to play competition, keeping up with the Joneses in dusting the furniture in the poultry house?"

But Alice, my neighbor, was very patient. "Just try it sometime. Wash them, and watch how much better egg production you get. The whole building seems brighter inside, and you'll find it pays not only in morale, but in dollars and cents."

I went on with the list:

"Fix the lawn fence. (There was good one, too.)

"Paint the cellar steps, and fix the one that squeaks.

"Clean off garden for plowing—and for winter.

"Put paper around the foundation.

"Clean sewing machine and oil it.

"Put putty on house windows.

"Clean the garage.

"See about fertilizer on spots on the lawn for late seeding."

On I went, down thru the list. I recalled many of the little things I'd like on my list. Little things that hubby would have been glad to help with when he stood about wishing for something of that kind to do.

For hubby is of the tinkering kind. Like the time he got some pieces together and made us a lawn mower.

Of course, we had to wait two whole years for the mower, he was so busy with oats, corn and milking cows; but we finally did get it, and it worked, too.

I thought about how I'd write my list—and then march right up and cross each thing off as I finished it—then put down something else.

As I picked up my scarf and started home, Alice called: "Yes, sir, a memo list is sure a good way to get things done, just as it is a good way to remember what to do."

And, buzzing home, I thought:

"So, that's the way she has always been able to accomplish so much thruout these past years, is it? Uh, huh! We'll see some one else will start getting odd jobs done too, I betcha!"—N. O., Dickinson County, Iowa.

WOMEN in your '40's' Do these symptoms betray your age?

Often many women between the ages of 38 and 52—are shocked to realize they are in the class commonly known as "middle-age" with its annoying symptoms which so often betray their age.

So if *you* suffer from hot flashes, feel weak, tired, nervous, restless, a bit blue at times—due to the functional "middle-age" period peculiar to women—try Lydia E. Pinkham's Vegetable Compound to relieve such symptoms.

This Great Medicine HELPS NATURE

For almost a century—Pinkham's Compound has been famous to help great numbers of women go "smiling thru" such middle-age distress. Thousands have reported remarkable benefits!

Pinkham's Compound taken *regularly* helps build *up resistance* against such symptoms. This great medicine helps *nature* and *that's* the kind you should try.

INEXPENSIVE: Pinkham's Compound costs very little compared to some other methods but this doesn't detract from its effectiveness.

Lydia E. Pinkham's VEGETABLE COMPOUND

Try Making Cough Syrup at Home. Quick Relief

Saves Big Dollars. No Cooking.

No matter what you usually use for coughs due to colds, you'll be more than surprised when you make up this simple home mixture and give it a trial. You'll wonder why you never used it before. It certainly does the work in a hurry.

Make a syrup by stirring 2 cups of granulated sugar and one cup of water a few moments, until dissolved. No cooking is needed—it's no trouble at all. Or you can use corn syrup or liquid honey, if desired.

Get from your druggist 2½ ounces of Pinex. Pour this into a pint bottle and fill up with your syrup. This makes a full pint of family supply—and gives you about four times as much for your money. It tastes fine, and never spoils. Children love it.

And for quick action, you've never seen its superior. It loosens the phlegm, soothes the irritated membranes, eases the soreness, makes breathing easier and lets you sleep.

Pinex is a special compound of proven ingredients, in concentrated form, a famous reliable soothing agent for throat and bronchial irritations. Money refunded if it doesn't please you in every way.

THE FARM FLOCK

Out of the Litter Put the poultry waterer up on stilts, so it will not get filled up with litter. The hens will then drink more water, and more water makes more eggs.

No Pay For Quality

Better Eggs Need Higher Market Value

DO YOU whistle or sing as you work among your chickens? If you do, we are told by a contributor in another magazine that you should always sing or whistle the same tune. I am a firm believer in regularity, as I have already mentioned; but I considered this was going a bit too far.

I have noticed, however, that the chickens know something is wrong when I happen to go thru the house dressed to go away from home, especially if I am wearing a long coat.

Our flock was culled and blood-tested for the last time yesterday, and we find ourselves facing the winter with 361 layers and 34 cockerels.

We are holding on to some extra males because there is still some time to go before hatcheries open for 1946 business, and I always prefer to have a few extras rather than to run short.

It has been our experience that the male birds are much more likely to develop colds when housed. I have a theory of my own about it. I never like to raise roosters by themselves.

We had to do it this year because of a shortage at the hatchery in the particular strain which they wanted us to use with these pullets.

When birds grow up together, housing them together is no problem. When we put these white cockerels in with our brown hens, life was made pretty miserable for the males.

They were picked and chased all over the house, and had to fight for a place at the feeders, waterers, etc. We put extra feeders and waterers, too, up on the pits, and it helped.

I read a few days ago where some reader thought it advisable to put the breeding cockerels in with some cull pullets if possible for about three weeks. If any disease or infection were going to show up, it would certainly do it in that length of time.

It seems reasonable to me that the vitality of the cockerels is taxed to the utmost when they are first turned in with the pullets. We put ours together about a month ago, and we have a hospital house apart from the layers.

We take all birds showing symptoms of colds out there where they can not reinfect the well birds. In that month, we have accumulated two hens and about ten cockerels. We give them individual treatment.

We were pleased to have the men say that the body weight of the entire flock was satisfactory. That is so important when production is heavy.

We sold 150 dozen eggs this week, which is just an average week for our all-pullet flock. I hope they are able to keep that up thru the winter.

I think it is easier to maintain good weight when you keep the feed in front of the birds all the time, and I do not believe that they eat an ounce more than when it is put out only at certain times of the day.

I think much could be done to keep prices on an even keel if we all tried to take better care of our eggs. If there were uniform standards of grading, which the producers could follow, I believe we would find it profitable.

I am amazed at the indifference shown by most of the produce buyers. It is true, they candle and sort to a certain extent. But if eggs were graded by size and shape, it would save a great deal of rehandling.

We had one buyer who appreciated our quality eggs, and sold them over his counter at retail prices. He said frankly that he depended on our eggs for that purpose, but we never saw an extra penny for our trouble.

When eggs are gathered several times daily, stored properly in a cool place, and put in clean cases according to size, shape and cleanliness, I think there should be buyers who recognize their value.—M. B., Jasper County, Iowa.

When Fresh Eggs Are Not Wanted

Eggs two to four weeks old make more tender angel-food and sponge cakes than do fresh eggs, according to a University of California report. Any experienced cook will agree—but she wants to be sure not to get over the border-line where an old egg becomes a bad egg.

Push More Mash Into Layers

Getting hens to consume a greater amount of higher-protein mash in proportion to grain will increase egg production. Consequently, the present tendency is to prefer limited grain feeding over the cafeteria style, where both grains and mash are kept before the flock, free choice. But enough grain must be fed to keep the birds from becoming thin.

You can SEE the RESULTS

A TONIC APPETIZER Your Hens Enjoy

Easy to Mix Dr. Salsbury's AVI-TAB in Wet or Dry Mash
Used by Thousands of Progressive Poultry Raisers
Hatcherymen and Feed Dealers Recommend It

Save yourself *worry* if some birds in your flock don't quite do their best. Give such birds the benefits of a tonic appetizer, this *easy, modern way*. Just mix Dr. Salsbury's Avi-Tab in the mash; watch your hens respond.

Thousands of progressive poultry raisers use and recommend this *handy* tonic appetizer for *birds of all ages*. Many report enthusiastically how birds perk up—get more out of feed. Recommended by hatcherymen and feed dealers, too. They see daily how Avi-Tab helps birds that need a tonic appetizer.

So *don't worry* needlessly about those unthrifty birds in your flock. Help them perk up. Give them the benefits of genuine Dr. Salsbury's Avi-Tab, developed and tested at the Dr. Salsbury Research Farm.

Yes, Avi-Tab is *easy to give*, and so *moderate in cost*. Ask for *genuine Dr. Salsbury's* Avi-Tab at hatcheries, feed, drug and other stores. Give your layers the benefits of Avi-Tab, *now*.

DR. SALSBURY'S LABORATORIES, Charles City, Iowa
A Nation-wide Poultry Service

Whenever your flock needs help, ask for "Dr. Salsbury's" . . . a complete line of poultry medicines, fumigants, disinfectants, vaccines and bacterins.

Proper Sanitation Pays!

Disinfect poultry houses with *powerful, pleasant* Par-O-San. Recommended by thousands. You'll *enjoy* its pleasant *clean* smell. Powerful, yet safe. Economical.

Soothe irritation — and simple

DIARRHEA is less distressing!

(NOT CAUSED BY INFECTION)

Too often simple diarrhea, not caused by infection, attacks laying flocks! It's a threat to Health — to Egg Production! So give your birds soothing relief from the intestinal irritation that usually attends such diarrhea, by adding the new Pratts In-Tes-Trol to the drinking water (or feed).

Pratts In-Tes-Trol is an effective astringent. It brings soothing relief to inflamed tissues. And where congested areas exist, soothing the irritation tends to allay and reduce congestion.

By lessening the distress birds suffer, Pratts In-Tes-Trol helps the healing process. Recovery can begin more quickly. The diarrhea is less of a threat to health and production.

TRY IN-TES-TROL WITH OUR MONEY-BACK GUARANTEE!

Buy a one-gallon bottle for $3.00 — and get a 60¢ pint without cost. Try the pint bottle (approximately enough for 100 birds for one week). If you are not *delighted* with results, return the full gallon and get your full $3.00 purchase price back. See your dealer. If he cannot supply In-Tes-Trol use coupon to order direct.

Pratts IN-TES-TROL

Pratt Food Co., Dept. IN-36, Phila. 6, Pa.
Enclosed find $3.00 for one-gallon bottle of PRATTS IN-TES-TROL, plus one 60c pint. It is understood that if, after trying the pint bottle, I am not completely satisfied, I will return the gallon bottle (collect) and the full purchase price of $3.00 will be refunded.

Chickens In Lockers

Family Helps Prepare For Freezer Storage

OUR whole family works at the job of dressing chickens for freezer locker use. The chickens are shut up separately from the others the night before. We arrange our work so that we can get an early start.

My husband and my son kill and bleed the chickens. Working rapidly, the two men scald the chickens and pick them. My husband has learned from long experience just how hot the water should be to do the job properly.

I start to singe the chickens just as soon as any of them are ready. I singe them over the flame of a kerosene burner. This is quicker, and does a better job than any other method I know of.

I then start washing them, and as soon as the men have finished picking the chickens, they help with the washing of them thoroly on the outside. All of the pin-feathers and such are removed. We aim to do a clean, thoro job. Then the entrails are taken out.

Some of the chickens are left whole, for use as roasters. The others we cut up for use as stewers and to fry or use in some other manner.

We use a sort of stockinette material and waxed freezer paper which comes in a large roll. We wrap the chickens in the freezer paper ourselves, and have found after some experimentation that we like just one chicken to a package best.

After wrapping the chickens in the waxed paper, we cut such lengths of the stockinette material as are needed for the packages, and slip the packages into them. This protects the paper against breakage, and thus against freezer "burn."

The feet of the chickens are removed. When the other chickens are dressed, I scald the feet, drain, and dip them in cold water. The skin then slips from them readily, but the toe-nails must be clipped off with a pair of old scissors.

Chicken feet make excellent soup, and, when wrapped with giblets, provide many an excellent basis for chicken soups, gravies and dressing stock.

We cool chickens before we wrap them. As soon as they are well cooled and wrapped, we take them to the freezer locker at once. Whoever happens to be in charge freezes them and places them in our locker for us.

We find that by using our own freezer paper and materials, we can save considerable money. Also, we prefer to cut up our own meats and poultry, as we have some of our own established ideas of how it should be done.—B. P., Nebraska.

Give Each a Chance To Eat, Drink

For 100 general purpose pullets or 135 Leghorns, the laying house should have 400 square feet of floor space, with 80 feet of roosts. Twenty nests are needed—one for each five birds.

Pullets should have 32 feet of feeder space inside the house. Two two-foot mineral hoppers for calcium, bonemeal and grit are needed. So are two three-foot green feed racks.

Have four feet of water trough, or a total of eight lineal feet of drinking space.

These Pullets Started To Lay Early

To the Editor: I have 136 pullets hatched March 22, and I got my first eggs on July 27. The birds were just four months and five days old. At the end of the first 19 days of laying, I had received a total of 132 eggs. On the day the pullets were five months and seven days old, I got 58 eggs.—Mrs. J. S. Hindman, Madison County, Iowa.

Drink Two Tons Per Month

It has been calculated that a flock of 200 pullets will drink two tons of water per month. They need water to make them thrive. But that's a pretty big job to leave to the kids or women folks. No wonder more and more people are arranging to haul or pipe water to their poultry.

PAW TUCKER—"Yep, Maw and I Chased That Ram, All Right!"

Happy Relief When You're Sluggish, Upset

WHEN CONSTIPATION makes you feel punk as the dickens, brings on stomach upset, sour taste, gassy discomfort, take Dr. Caldwell's famous medicine to quickly pull the trigger on lazy "innards" and help you feel bright and chipper again.

DR. CALDWELL'S is the wonderful senna laxative contained in good old Syrup Pepsin to make it so easy to take.

MANY DOCTORS use pepsin preparations in prescriptions to make the medicine more palatable and agreeable to take. So be sure your laxative is contained in Syrup Pepsin.

INSIST ON DR. CALDWELL'S—the favorite of millions for 50 years, and feel that wholesome relief from constipation. Even finicky children love it.

Do Your Chickens Suffer from "Colds"?

Chickens do not die from so-called "colds" but death results from strangulation caused by accumulations of sticky, choking mucous (phlegm) in the breathing passages. This phlegm must be removed if the bird is to survive.

Read this letter from Thomas Pulliam, a Kentucky poultryman:

"I have had birds choking, strangling, and with their eyes closed from common colds and have saved them all. One cockerel was nearly dead. He lost 5 pounds. I applied Group-Over, and in two weeks, he was full of pep and fighting every rooster on the place."

Why don't you try Group-Over on your flock? It's easily used. See for yourself how the Group-Over treatment helps bring needed relief. If your dealer can't supply you, send 50c for a liberal supply (or $1 for the extra large size) to Burrell-Dugger Co., 712 Postal Station Bldg., Indianapolis 4, Ind. Group-Over must satisfy you perfectly or your money refunded.

Get Those POULTRY LICE & Feather Mites

Lice and feather mites can be cleaned up easily, quickly.

Get the BLACK LEAF 40

Just a few drops on roost according to directions will do the job. Ask for Black Leaf 40.

Victory Bonds - Hoard Them

Sarah Jane Says:

Not Many Eggs Now

To the Editor: For my part, on Thanksgiving, the dressing and cranberry jelly are almost as important as the turkey. As for turkey, it is nice to have on a holiday, but so is chicken.

Most of us in America have had so much to be thankful for this year that we could use a whole week for giving thanks. The people across the waters, in either direction, have hardly enough to keep them alive, and, as for clothing and shelter, they have very little of either.

A woman in our group has pieced so many comfort tops that it seemed to me she had more than done her part. I said so to her, but she replied:

> "No person has done his part until it is all done, and the misery and the suffering have been relieved."

I think the women all over the country are trying to do all they can to provide clothing for the destitute.

As for our farm flock, there isn't anything new to say about them. The hens have laid about two dozen—or almost three dozen—eggs a day the past week.

I hope they are at their lowest ebb now, but the chances are they will fall off more yet. We had only half a crate of eggs again this week (35 cents a dozen now). I think some stores in the city are paying 40 cents.

That, no doubt, seems too much to those who buy eggs, but laying mash is anywhere from $3.25 to $3.65, depending on the contents. The sacks, too, make a difference.

These sacks surely are useful. I have several projects started involving feed sacks, and now that the outside work is narrowing down, I surely can get some of them finished. Evenings are long after supper now.

> I've been frying lots of chickens recently, and I hope to can some in a week or so, when I finish with the pears.

Our old pear tree had several bushels of fruit this fall. We are delighted to have the pears, because we had only a few apples, and were surprised to have even these few, as it frosted so late in the spring.

Corn gathering is progressing. At first, the corn seemed to be too green to pile up much, but the last few days the moisture has not been noticeable. The ears are mostly large; about five ears to the hill as a rule.—Sarah Jane, Warren County, Iowa.

Does Corn Encourage Cannibalism?

To poultry keepers anxious about 1945 corn supplies comes news from the Massachusetts State College asserting that corn is not an absolutely essential grain for poultry feeding.

Oats are to be preferred, and they also tend to prevent cannibalism. It is recommended that oats be kept in self-feeders.

While these northeasterners have not formed an unchangeable opinion, they suspect that something in corn actually encourages cannibalism.

Little Silos For Poultry

Silage for poultry is again being discussed. It provides Vitamin A feed for the non-range months. The silos used for experimentation are five feet in diameter, set on a six-foot concrete octagonal base. The silo is built 14 feet high, of fir flooring, and holds approximately eight tons. Young layers are fed three pounds daily per hundred birds; the breeders get four pounds per hundred.

HELP! HELP! this bird needs NEOL quick!

ACT NOW—PREVENT BIG LOSSES!

With cold weather come waves of respiratory diseases! Flocks everywhere suffer from stopped-up nostrils, choked-up throats due to accumulations of sticky, strangly MUCUS. Birds are miserable... lose weight... waste feed... *egg production drops . . . profits disappear.*

Now is the time to use NEOL, Gland-O-Lac's famous oil-base preparation, that *helps loosen accumulated mucus.*

Pour NEOL in the Drinking Water

NEOL floats on the surface of the water... gets in the throats and on the nostrils... starts working right away. Contains oils of Thyme and Eucalyptus, Beechwood Creosote, and other active ingredients. Quick, effective, reliable.

6-oz. Bottle, $1. Pint, $2.

JEMCO STOVE PIPE

130 EGGS A DAY INSTEAD OF 23

Mrs. Wm. J. Turvey, poultry raiser in the far north state of Washington, tells an interesting story of increased egg production. She says:

"I have 178 chickens. In November their appearance was poor, and I was getting 19 to 23 eggs a day. I started giving Don Sung in their feed. Now, in December, I am getting 130 eggs a day, and my flock is livelier and looks much better. Surprised isn't the word—I'm really amazed at the change in my flock."

Will you do as well? We don't know. But we do know that you mustn't expect eggs from hens that are weak, under-vitalized and lazy. When flocks are deficient in iron, calcium, manganese and other elements which laying hens require and which are necessary to pep-up egg production, Don Sung supplies these essential mineral supplements. It does not force or hurt the hen in any way. Why not try Don Sung for your flock? If your dealer can't supply you, send 50c for a trial package (or $1 for large size holding 3 times as much) to Burrell-Dugger Co., 42 Postal Station Bldg., Indianapolis, Ind. 4. Don Sung must show you a profit or your money will be refunded. Start giving Don Sung to your flock now.

DID YOU SAY **POX?**

Don't let Pox wreck egg production, kill valuable birds. Get D.R.D.! Used and recommended by thousands of poultry raisers. Give D.R.D. at the first sign of Roup, Pox, Pneumonia. Preferred by many dealers and poultry raisers alike! D.R.D. is easily given in the drinking water. May be used in metal waterers. Economically priced at only $2.75 a gallon. Ask for D.R.D.!

Troubled with Cholera or Typhoid? Begin treatment promptly with FOWLTONE. Also the easy, economical way to give your birds a tonic. Thousands of pleased customers can't be wrong! Give in any fountain. Gallon, $2.75. At your dealer's or sent prepaid on receipt of price. Pamphlet FREE. Dealer inquiries invited.

Tenant Objects To Wiring Home

I am at present renting the farm I own, but plan to move onto it March 1. This fall, they are running the high line past the place, and I would like to have the house and other buildings wired this winter. The tenant objects. Do I have the legal right to do this work now, in preparation for my occupancy next spring?

This depends upon the terms of the lease. Ordinarily, a lease permits the landlord to go on the premises to make improvements, unless such action would seriously interfere with the enjoyment of the premises by the tenant.

It would not appear that wiring the barn and other outbuildings would interfere too much. It might be different in the house; but it's hard to predict what the outcome would be if a dispute of this nature were taken to court. We hope you can work it out with your tenant.

Sellers of Automobiles Must Report

Sellers of used passenger cars—rather than purchasers—are now required to file certificates of transfer with the local OPA price control boards, to help keep a check on the prices paid.

Used cars are not to be sold at prices in excess of ceiling prices which have been established for the various makes and models. Local ration boards can furnish information regarding such ceiling prices.

Delivering Share Corn For Owner

I'm a tenant on field-rented land. I wasn't requested to shell and deliver the landlord's share of the corn until after the lease had expired and I was no longer farming the land. Am I still obligated to do this?

The terms of your lease would govern. There is no specific law on the subject. If your lease simply provided that you were to shell and deliver the landlord's share of the corn, without any limitation as to time, you would still be obligated to do the work.

However, if your failure to shell and deliver the corn was due to a refusal on the part of the landlord to let you do it while still using the land, and if you have now moved away some distance so that a materially greater amount of time and travel would be involved in performing the work, the landlord should make some adjustment with you by way of compensation for the necessary extra expense.

Making Farm Fences Hog-Tight

If one farmer makes half of a partition fence hog-tight, does the adjoining farmer have to build his half the same?

The Iowa law provides that a partition fence may be made tight by the party desiring it, and when his portion is so completed and securely fastened to good substantial posts, set firmly in the ground, not more than 20 feet apart, the adjoining property owner shall construct his portion in a lawful tight manner.

Note that both portions of the partition fence would not necessarily have to be exactly alike, but must be "lawfully tight." The law describes two types of fence construction which may be used in making a fence tight, and then ends up by permitting "any other kind of a tight partition fence which, in the opinion of the fence viewers, is equivalent thereto."

The township trustees are generally also the township fence viewers. They are empowered to settle fence disputes. See Chapter 88 of the 1939 Code of Iowa, which may be inspected in the office of the officials at your county courthouse.

Inheritance Tax on War Bonds

My father died recently. His estate is subject to inheritance tax. He left Series "E" War bonds, which are jointly in his name and the names of his children. Are these bonds subject to the inheritance tax?

Unless the children actually paid for these bonds, it is our opinion that they are subject to inheritance tax. Iowa courts have held that property descending thru death, even from one joint owner to another, where there is a right of survivorship, is still subject to inheritance tax. This would be true even tho the bonds were in the names of the children alone, if they didn't actually pay for them.

If the children can show that they actually owned a part interest in the bonds by having paid part of the cost of them, the amount which they put into them would not be subject to tax, but the burden of proof is upon the heirs.

Nelson's MASTER ROOFS

"Best for the Weather's Worst!"

Don't just suffer the agonizing pain, torture, itching of simple piles. Remember, for over thirty years amazing PAZO ointment has given prompt, comforting relief to millions. It gives you soothing, welcome palliative relief.

Corn Piles Up rapidly with a two-row husker. This photograph was taken on the K. Berkett farm, in Polk county, Iowa.

Plans For Soft Corn

Sort at Crib, Dry in Field, Sell It, Feed It

(Continued from page 1)

"Let it dry in the field is my method," said a farmer, after a Webster county, Iowa, elevator man had told him his sample had over 30 per cent moisture. He told of a neighbor who husked corn in the spring last year, and his late corn graded No. 2 at the elevator in late March.

"That won't work for everybody," a farmer in the group objected. "I've got to move March 1. Anyway, some ears are falling off the stalk. The freeze seemed to injure the stems."

Farmers realize that the corn had just as well spoil in the field as in the crib. But some have a method by which they expect to husk wet corn and get it on the market.

At a Franklin county, Iowa, implement store, this plan was heard: "I'm going to let the corn dry as much as possible in the field, then pile it up. When it's frozen hard, I'll shell it, haul it to the elevator and take the dock."

"That sounds all right," said another farmer, "and I guess soft corn will shell when it is frozen; but what will happen to the market if everybody does that? Remember, there's no support price for corn too wet to seal."

"This is a big country, and they don't have wet corn all over it," was the optimistic reply. He threw a universal joint into the back end of the pick-up and hastened away to attach it and get the corn picker going.

One method of handling the wet corn crop is not heard, at least in the cash corn country of northern Iowa. They don't expect to buy cattle to feed the corn to. And from the stockyards there is little evidence of a "soft corn cattle market."

But hogs may be fed to greater weights in order to use the wet corn. One Mahaska county, Iowa, hog man thinks another hog glut is due this winter as a result of holding hogs to feed them unmarketable corn.

The high moisture corn is in good shape for feeding to livestock. Mold was not developing very fast in early November. Favorable weather appeared to be making light, chaffy corn rather than soured and moldy ears.

Talking directly with farmers indicates there are four methods that are being used for handling the soft corn.

1. Sort the corn at the elevator and put it in ventilated or narrow cribs. This method will be used for the best fields on many farms, and for all fields on farms where the corn is in fair shape.

2. Leave the corn in the field until it is dry enough to crib, even if it takes all winter. Farmers who don't have to move next spring, and farmers with plenty of nerve, will follow this method. It worked well last year.

3. Sell the corn when it is frozen hard in the winter. Farmers who follow this method will crib the corn in November or early December. Then they will shell it after a week or more of zero weather.

4. Feed the soft corn this fall and winter. Hogs can be fed to greater weights. Some may get cattle, but feeder cattle prices are too high for the "in-and-outer" to get in this year.

What will be the effect of these procedures on the cash grain farmer or the cattle and hog feeder?

The first and second methods above will not disrupt markets in any way. The farmers who follow the first method may be taking some chance on the corn molding in the crib, and, in the second method, there may be some wastage on corn left in the field.

The corn market might go below the ceilings if too many farmers used the third method, selling while the corn is frozen. But the discounts on high moisture corn make the ceiling look quite low to begin with.

Ceiling on 20 per cent moisture corn is 6¾ cents below No. 2 corn. For 25 per cent moisture, deduct 19¼ cents; and for 30 per cent moisture, the discount under No. 2 corn is 31¾ cents.

That means 20 per cent moisture corn in central Iowa has a ceiling of about 95 cents; 25 per cent moisture, 82 cents, and 30 per cent moisture, about 70 cents.

These discounts are for moisture only. Corn must grade No. 2 on other points. And they are minimum discounts; elevators or feeders may buy lower if they can.

The fourth method—feeding the soft corn this fall and winter—seems to be a good method if the farmer has the livestock. Hog numbers on farms, and cattle in feed-lots, are not excessive as compared with present meat demand. The chance of loss by lower meat animal prices must be balanced against the chance of loss by spoiled corn.

Feed the Egg Maker with the PROTEIN PUNCH

EXTRA proteins for extra eggs! Extra vitamins, minerals, enzymes to balance your grains for really BIG egg production this winter! That's the secret of the results you get with

Sargent Grain Balancer

This great egg-building concentrate gives your layers not one, but FIVE proteins in a coordinated blend. It gives them 12 minerals, 10 vitamins, plus important digestive enzymes to help them get more egg-making VALUE from their rations. Feed it cafeteria style, and SEE the results. No grains to grind, no mashes to mix. Just put it before the flock, with your whole grains, and they balance their own rations.

IN ATTRACTIVE DRESS PRINT BAGS

Get Sargent Grain Balancer at your dealer's now, in your favorite dress print bags. Prints and tints in all the flattering new colors.

Ask your dealer. Give your hens the BALANCE that means heavy egg production all winter. Do it the low-cost Sargent way.

THE GOVERNMENT NEEDS YOUR OLD WASTE PAPER!

New Corn is being fed to these hogs by Keith Curtis, hog raiser of Jasper county, Iowa.

Hog Raisers Give Views

(Continued from page 8)

Hog raisers tell below their views of the new graduated hog price floors, which go into effect next October.

"I think we all realize the squeeze will be on sooner or later. I personally don't think support prices will hold when the demand for pork weakens." —Paul Pegram, Warren County.

"The hog price should crowd the ceiling next summer and early fall. I think it will bump the floor in late fall and winter." — Howard Schwieger, Franklin County.

"I would think hog production (under the new floors) would largely be confined to the cash grain areas if grain prices stay at present levels. Marginal feeders will surely be squeezed by the price of corn and lower hogs, bringing about a substantial reduction in hog numbers."—Reed Sponsler, Wayne County.

"In my estimation, the hog producer has not had a fair shake during the past three years. I believe in price control and in holding down inflation, but I feel that the ceiling on hogs has been too low in relation to other commodities."—Carroll B. Jacobson, Story County.

"Here in north-central Iowa, the soft corn this year is going to have a bearing on the number of pigs farrowed next spring, especially those to be marketed before October 1. If there is not going to be a ceiling on labor, especially farm labor, the hog man can not afford to raise hogs for less than the present ceiling price."—I. W. Roland, Clay County.

"Due to changing conditions in regard to labor, and other things, including the government debt, I think hog prices should remain as high as they are now for at least two years after the war is officially over."—L. H. Wengert, Story County.

"The floor will have to be quite solid, when supply exceeds demand, in order to hold the hog price level." —Iver B. Rathbun, Buchanan County.

"I think the support prices are the only way to keep meat on the poor man's table. But let the OPA say what it's going to do and stick to it. I don't like to see it do anything else but stop inflation." — Henry Goth, Calhoun County.

"The way many farmers are fixed, May is the best time for pigs to farrow. This brings them to market in December, the low-price month."—Wayne Parcher, Floyd County.

"I feel that the support plan for hogs is a program that is worth giving a fair trial. It will encourage hog raisers to have their pigs farrowed earlier. This will level the marketing over a longer period, and may avoid the big runs in December and January."—Ray Lange, Clayton County.

HAVE YOU Tagged YOUR FUTURE IMPLEMENT NEEDS?

LANTZ REG. U. S. PAT. OFF. KUTTER KOLTER

Plan your future implement program now, and be sure to include a Lantz Kutter-Kolter in your plans. Deliveries will be made as fast as material restrictions will permit. The Lantz Kutter-Kolter SOLVES THE TRASH PROBLEM. Enables a moldboard plow to cut through—aids in turning under trash, hybrid stalks, and cover crops. No stoppage to clean a clogged plow. Saves time and work. Aids in *fighting corn borer.*

Farm News Briefs

IF THE PACE bill goes thru congress, parity on corn might go up to $1.47 a bushel. The Pace formula provides for labor costs, including family labor.

▲ ▲ ▲

ARMY REPORTS shows that bomber attacks on ball-bearing plants, such as Schweinfort, did little good, but that bombing of synthetic oil plants and transportation played a major part in Germany's defeat.

▲ ▲ ▲

CASH INCOME of Iowa's farms may drop to $1,335,000,000 in 1945, according to Department of Agriculture estimates. This is lower than 1943 and 1944, but far above pre-war.

▲ ▲ ▲

RURAL YOUTH of Iowa will have their annual get-together and state talk meet on Monday, November 19. Dean H. H. Kildee will be the speaker for the annual banquet in the evening. The event is to be held in Des Moines, just before the state Farm Bureau convention.

▲ ▲ ▲

CRANBERRIES galore is the prediction of the Federal Crop Reporting Board, which says this year's production exceeds the 10-year average and is far over last year's short crop. With the army promise of sufficient turkeys for civilians—and with Iowa strong on turkeys anyway—Thanksgiving and Christmas should be fine events for our appetites.

▲ ▲ ▲

NEW PRESIDENT of the County Extension Directors Association is Walter B. Eyre, of Des Moines county, with Myron Lacy, of Clinton county, as the new vice-president, and Clifford C. Johnson, of West Pottawattamie, as the secretary-treasurer. The conference was held at Ames the last week in October.

▲ ▲ ▲

RETURNED to his seat on the board of the Federal Land Bank at Omaha is Raymond Sayre, of Warren county, Iowa. The many folks who know his wife, thru her many activities for the women's Farm Bureau organization, seldom realize that Sayre is a busy man in the agricultural world, but in an entirely different field.

▲ ▲ ▲

VETERANS on the farm will have help in rehabilitating themselves from Fred O'Reiley—for the past 17 years county extension director in Allamakee county, Iowa. O'Reiley comes to Des Moines for the Veterans Administration as senior agricultural training officer for Iowa.

▲ ▲ ▲

CARLOT ENTRIES in the Chicago Fat Stock and Carlot Competition can be made up until November 24. Other classes have closed. The wartime substitute for the International Livestock Show will be held December 1 to 6.

EGG SURPLUS?

With more meat available, and egg production high, egg prices are likely to drop to support levels in late winter and spring.

This drop can be prevented if exports of dried eggs for relief are revived. Liberal appropriations for relief of northern Europe, and passage of the UNRRA bill, could avoid an egg crisis on corn belt farms next spring.

Dried milk will also be affected by foreign relief policy. Some market milk districts will be in trouble next summer unless dried milk exports help with the surplus.

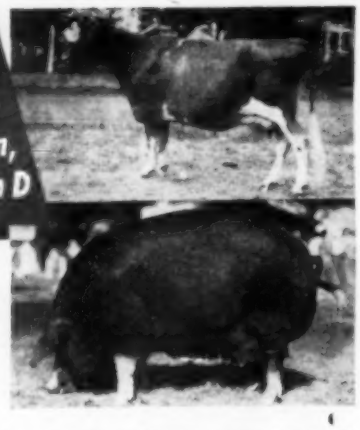
SAVE ALL YOUR OLD WASTE PAPER—IT IS VALUABLE

COWS-IN-CALF SOWS-IN-PIG

require plenty of calcium, phosphorus and Vitamin D



Gestation places a heavy strain on the mineral supply of cows and brood sows. During reproduction they must build sound skeletons for their young and *at the same time* maintain their own bodies. That's why plenty of the bone-building minerals, calcium and phosphorus—and adequate Vitamin D are so essential.

Vitamin D is vital to cows-in-calf and sows-in-pig. Vitamin D facilitates the assimilation of calcium and phosphorus—helps promote "mineral health"—helps prevent costly rickets — aids in the development of vigorous, healthy young.

Fleischmann's Irradiated Dry Yeast is a rich, *economical* source of Vitamin D for four-footed animals. The next time you buy feeds, concentrates, or minerals, make sure the words "Irradiated Dry Yeast" are on the feed tag. Write Desk MR-11-10 for free booklet "Vitamin D for Four-Footed Animals at Low Cost."

$3.50 POSTPAID 5-POUND PACKAGE

If you can't obtain feeds, concentrates or minerals containing Fleischmann's Irradiated Dry Yeast, see your dealer or send $3.50 for the postpaid 5-lb. FIDY package. Contains enough for 8 dairy cows and 6 calves for one year, or 6 brood sows for a year and 40 pigs to market size. Feeding directions for four-footed animals with each package. Address STANDARD BRANDS INCORPORATED, Desk WF-11-17

Who Gets the Seed Crop?

To the Editor: When a tenant pays cash rent for hay land, and, after cutting a crop of hay, a seed crop is harvested, does the owner of the farm get a share of the seed? Corn and oats are divided on a 50-50 basis.—F. D., Poweshiek County, Iowa.

In most farm leases, when a tenant pays cash for grass land, he is at liberty to use the grass crop in any way he sees fit. He could cut either the first or second crop for seed or hay. Both would belong entirely to the operator.

However, some leases provide that the second crop on grass land shall be left on the ground or plowed under to benefit the soil. Cash rent is usually a little lower where this provision is included.

If the second crop on hay land is plowed under, the tenant may lose a little by not getting the second crop. The landlord may lose a little in the cash rent. But both may gain by more nitrogen and organic matter in the soil and a better crop the next year.

In one kind of lease, the landlord customarily gets one-half of the grass seed crop. That is, when the lease is 50-50 on both grain and livestock. But, of course, in that kind of lease, the tenant pays no cash rent.

Plant Wheat Only Once

Wheat that doesn't have to be reseeded each year has been produced in Russia. The roots live over the winter in the fields. All you have to do is to harvest the wheat each year when it gets ripe.

Oats and rye that are true perennials are also envisioned by the Russian agricultural scientist, Professor Tstisin, who produced the perennial wheat.

There is mild excitement over the experiments. "This wheat can save seed, machines, fuel and labor," said the Russian.

He sees perennial grains growing on the semi-arid plains of Russia, where it is risky to use seed and labor to plant ordinary grain.

Further proof of the success of the new wheat would also produce excitement in the United States. Much of our western section is very similar in soil and climate to parts of Russia.

The perennial wheat is a cross. Our ordinary wheats, developed for their grain, are crossed with an oriental, barren wheat grass. The resulting wheat gets its resistance to cold and disease from the sturdy roots of the wild plants which have been able to survive without the help of man.

Long Belt Gives More Power

Under ordinary conditions, a tractor will deliver slightly better power with a long than with a very short belt, for these reasons:

Since the upper side should always be the slack side, the long belt will hug both pulleys with a longer arc of contact, and hence there will be less belt slippage.

Because of the greater contact, much less belt tension can be used, and there will be less bearing friction.

Due to its greater weight, the long belt will have a considerable inertia or fly-wheel effect, which is sometimes badly needed where tractors have small and light pulleys.

7 Plus Features for Faster, Easier LOADING

COATS' MECHANICAL MANURE LOADER

Investigate these EXTRA advantages for faster, easier manure loading with the famous Coats' loader:

- Telescoping Frame.
- Less leverage on tractor.
- Telescopes to only 3' loading clearance.
- Belt pulley drive.
- Simplified wood cone clutch.
- Hay buck and snow bucket attachments.
- Fits all row-crop tractors.

Compare the features. Compare the price. Get the BEST when you buy.

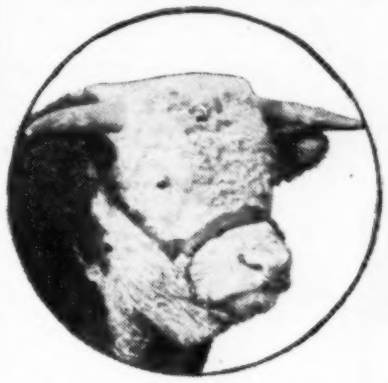
IOWA HEREFORD CATTLE BREEDERS ASSOCIATION SALE



Sioux City, Ia.
December 10 and 11, 1945

50 BULLS
20 COWS and HEIFERS

We will hold this sale at the Stock Yards Sale Pavilion where we have always held it. The cattle will be judged on Decem-10, and the sale will be held on December 11. In looking over this consignment will say that we think it is by far the best lot of cattle this association has ever sold at Sioux City, and we think we have just what the Hereford breeders are looking for in this sale. We have bulls for the breeders who are looking for herd sires and we also have bulls for the farmers and range men. The breeders selling cattle in this sale are as follows:

CONSIGNORS

J. H. Bradford ..... Fonda
E. O. Johnson & Son ..... Milford
Dick Hinkeldey ..... Alta
S. O. Knudson ..... Sioux Rapids

LIVESTOCK NEWS

The Illinois Polled Shorthorn sale, at Normal, Ill., November 3, brought out a good attendance. Bert Hanson placed the awards in an able manner. The champion female, Hilltop Mayflower, from the herd of Charles Griffin, sold for $510 to Arthur Schiele, Cisne, Ill. The reserve champion was Staggsland Felicia, and sold for $430 to John H. Morrison, Homer, Ill. The champion bull was Staggsland Cicero, another M. R. Stagg & Son entry, a son of Collynie Goldspur, and sold for $410 to Virgil White, Williamsville, Ill. The reserve champion, Foxglove Type, sold for $325. The top of the bulls was Rosewood Colonel, from the Roy Samson herd, and sold for $525 to A. N. Cabalek, Villa Grove, Ill. Wayeross Gallant Mercury, from the Morris Bros. herd, brought $510, and went to Netzke Bros., Oak Hill, Ill. The 19 bulls averaged $241, with 54 females at $223, and the 73 lots at $228 each. Auctioneer, J. E. Halsey.

The Missouri Polled Shorthorn show and sale, at Sedalia, Mo., October 29, was very successful. The champion bull, Sultan Supreme, owned by V. B. Fagin, sold for $500 to P. H. Cypert & Son, of Georgetown, Ark. The champion female, Jnoetta Favorite Missie, owned by John H. Kroeck, sold for $500 to Geo. Smith, Keokuk, Iowa. Cattle went to buyers in Iowa, Missouri, Arkansas, Montana and Nevada. The 16 bulls averaged $241, with 26 females at $220, and the 52 lots at a general average of $227. Auctioneer, J. E. Halsey.

The Poland China sale of C. W. Crees, at Bayard, Iowa, on October 17, was on a day when farmers were in the field, and consequently the crowd was not large. However, he sold 47 head at an average of $60 per head, with a top of $101 on Boar No. 12, which went to Andy McLaughlin, Coon Rapids, Iowa. C. S. Peters, Woodward, Iowa, took No. 7 at $100. Mr. Crees had a splendid lot of well-grown boars and gilts, but the weather just kept the buyers at home. It was what you might call a "buyers' day," and there certainly were some good bargains.

The Penningroth Bros. and Gilbert Kardel Shorthorn sale, at Walcott, Iowa, November 21, was well attended. The top of the sale was Rosewood 21st, and sold for $450 at Walter Brigman, Walcott, Iowa. Rosewood 23d went at $440 to Emil Lagge, Davenport, Iowa. D. Buttercup 3d sold for $405 to Ward Turnbull, Bradford, Ill. The top bull was Sergeant Model, and sold for $335 to Otis Arnold, Atalissa, Iowa. Sergeant Promoter sold for $325 to L. C. Arey, DeWitt, Iowa. Wellington Knight went at $325 to Arnold Boehman, Dixon, Iowa. All sold to Iowa and Illinois buyers. The 25 females averaged $275, with 15 bulls at $252 and the 40 lots at a general average of $266. Auctioneer, J. E. Halsey.

The annual Shorthorn sale at Helfred Farm, Des Moines, Iowa, October 12, brought out one of the largest crowds to attend a sale in recent years, and from a widespread territory. There was a good demand for females mated to the herd sire, Imp. Rampton Major. The top was Victoria Maid of Helfred 2d, a daughter of Helfred Spotlight, and sold mated to Rampton Major for $2,350, to Dr. V. W. House, Washington Court House, Ohio. Rosewood of Helfred 17th, mated to Rampton Major, sold for $2,100 to R. H. White, Mendon, Ill. Helfred Beauty 9th, mated to Rampton Major, sold for $2,050 to Merryvale Farm, Grandview, Mo. Princess Victoria 17th, mated to Rampton Major, sold for $1,100 to Hal Williams, Pomona, Calif., who purchased 10 head in the sale. The top bull was Rampton Major 2d, and sold for $1,500 to R. H. Ritchie, Des Moines. Helfred Air Control sold for $925 to Warren Dankel, Glidden, Iowa. Helfred Not Law was the favorite of many, and fell to the bid of $850 made by C. L. Rees & Sons, Pleasantville, Iowa. Seven of the 11 bulls went to Iowa buyers. The offering went to eight states, distributed as follows: Iowa 15, Wisconsin 1, California 10, Illinois 3, Missouri 2, and one each to South Dakota, Ohio and New Mexico. The 23 females averaged $900, with 11 bulls at $541, and the 34 head at a general average of $785. Auctioneer, J. E. Halsey.

The Spotted Poland China boar sale of Miles M. Mann and his son, Max Mann, at Woodbine, Iowa, on October 6, drew a good crowd and a good day, and they made a good sale—in fact, one of the best of the fall season. They sold 40 head of their tops at an average of $106 per head, the top being No. 3, and he went to L. C. Croft & Son, Kirkman, Iowa, at $255. No. 1, his litter brother, went to Wilson Bros., Paton, Iowa, at $230. No. 4 went to Oscar Torneton, Council Bluffs, Iowa, at $170; No. 7 to Joe Edding, Granville, Iowa, at $190; No. 27 to Stagelman & Sons, Denison, Iowa, at $102.50, and Nos. 21, 6 and 17, at $100 each, to A. C. Fichter & Son, Randolph, Iowa, Mr. Schuttler, Carroll, Iowa, Virgil Rank, Soldier, Iowa, and Ralph Jones, Logan, Iowa. Fichter & Son also took No. 12 at $175; Carl Hebner took No. 8 at $175, and No. 19 went to Paul M. Larson, Harlan, Iowa, at the same price. Arthur Nelson, Scranton, Iowa, got No. 14 at $145, and No. 20 went to Leo Diers, West Side, Iowa, at $115. Charley Taylor did the selling.

The Nodaway County Aberdeen Angus sale, at Maryville, Mo., on October 2, was well attended, and they sold 66 head of cows and heifers at an average of $292.06 per head, with a top of $1,300 on No. 6, a junior heifer, going to J. F. McKinney & Sons, King City, Mo. Dr. Ralph Wadley, of the Raema Farms, Lansing, Mich., took Juanerra Pet at $975 and Julia Erica 2d at $540. Penny & James, Hamilton, Mo., were heavy buyers and secured the top heifer, Elba of Walnut, at $600. Other good buyers were Strobert Bros., Blockton, Iowa; Angus Valley Farms, Tulsa, Okla.; M. I. Lindlay, Wray, Colo.; W. D. Butler, Mt. Ayr, Iowa; Morris O'Connor, Blockton, Iowa; Walter Scott, King City, Mo.; C. R. Peters, Des Moines, Iowa; Chas. Westerhaupt, Avalon, Mo.; Ray Maynard, King City, Mo.; Robinson & Son, Stanberry, Mo.; R. K. Swan, Maryville, Mo., and others. Col. Roy G. Johnson did the selling.

The Dale A. Christensen Duroc sale, at Harlan, Iowa, on the evening of October 17, was well attended, and he sold 26 boars at an average of $90 per head. No. 2 was his top boar, going to C. C. Peer, Algona, Iowa, at $155. No. 1 went to Perry & Ossenkop, Vail, Iowa, at $127.50; No. 4 to Walter Finley, Harlan, Iowa, at $110; No. 32 to Harsh Bros., Oakland, Iowa, at $145, and No. 5 to the same firm at $105. Warren Brundage, Kirkman, Iowa, secured No. 13 at $105, and No. 31 went to Chris Ludwukes, Harlan, Iowa, at $103. The 13 spring gilts averaged $63.80, with a top of $115 on No. 27. It was Mr. Christensen's first sale, and was very satisfactory. Col. H. J. McMurray was the auctioneer.

The Duroc Jersey sale of Ernest L. McDermott and Albert W. Mueller, at Wiota, Iowa, on October 12, drew a nice crowd, and they sold 49 head of boars and gilts at an average of $80 per head. They had a nice offering of well bred and well fed hogs, and they were taken right off the bat. The top boar was No. 25, and he went to Hans Hansen at $121. Howard Gray, Botna, Iowa, took No. 11 at $118. No. 6 went to C. F. Jones, Elwood, Kan., at $82.50, and No. 17 went to Paul Steel, Anita, Iowa, at $82. Elvin Rude, Moorhead, Iowa, took No. 62 at $80. The 10 gilts averaged $64.49, with a top of $90 on No. 35, going to Hans Hansen. Col. Frank Barber cried the sale.

The Milking Shorthorn sale from the Peerless and Belle Vernon herds, Decorah, Iowa, September 29, resulted in disposing of 16 bull calves that averaged $143 each and 52 females for $204 each. The 68 head made an average of $190.

Ask for "ADDED VALUE," a FREE Illustrated booklet, also list of breeders.

AMERICAN POLLED HEREFORD ASSN.
710 Old Colony Bldg., Des Moines, Iowa

REAL HEREFORD BARGAINS

We have ten outstanding young bulls, including several herd bull prospects, among them Real Gold Domino 4th, a yearling herd bull prospect that rates among the top bulls in northern Iowa. These bulls are all out of Real Prince Domino 159th, a bull that stood first in his class in Denver a few years ago. He is a son of Real Prince Domino 33d, this bull has proven to be one of the greatest sires in the business, at the Fulscher Ranch in Holyoke, Colorado. These bulls are out of cows by Real Prince Domino 49th, a brother of the "334," and out of Real Prince D. 20th, a bull that rated high in the state show several years ago. We also have some nice heifers and cows for sale. One extra good heifer calf by Real Silver Domino 32d. The cow heifers are out of or bred to BEAU REAL 434, our herd sire.

We must sell these cattle as we do not have the means to carry them over the winter. We have priced reasonable and would sell them on the farm. We do not believe that you can buy the equal to these bulls anywhere for twice the money. These cattle are priced to sell and must sell.

DISPERSION SALE

Hogan & Anstey Herefords

AT PUBLIC AUCTION

Atlantic, Iowa, Monday, November 19th

One of the greatest herds in western Iowa

192 HEAD PUREBRED REGISTERED HEREFORDS

Consisting of 67 head of cows with 67 calves at foot. Anxiety bred with Beau Dover and Beau Gaston breeding. 24 head of 2-year-old heifers as good as have been sold this year. These cows and heifers have been mated to Dover Lad 104, Gaston Boy 97th and Bud Randolph 207, three excellent herd bulls. Calves at foot by these sires and Beau Gaston 608. 29 yearling open heifers sired by the above bulls. Our three great herd bulls are selling, also one 3-year-old and one yearling. This is the entire herd of Hogan & Anstey of Massena, Iowa, known to be one of the very best in the West, with 21 years of constructive breeding behind them. They will be found in their everyday clothes, but they are in nice condition. We hope that every breeder and farmer who might be looking for some good Herefords will make it a point to attend this sale. It is in sales of this kind that you get the real bargains. We are sure that you will like this offering and that you will find just what you are looking for in well bred Hereford cattle. Write for catalog at once and please mention Wallaces' Farmer and Iowa Homestead. For further information write

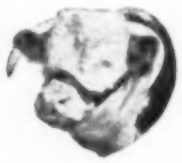
JOHN H. BLOCK'S

ANXIETY DOMINO HEREFORDS

AT PUBLIC AUCTION

WORTHINGTON, MINN. DECEMBER 6th



25 BULLS - 25 FEMALES

This we think is about the best offering we have ever put through an auction ring, and the breeding behind these cattle is the best known to the Hereford breed. We are selling 25 very nice bulls and 25 splendid cows and heifers, and these are in nice condition. These are sired by Real Prince 210th, by Real Prince Domino 33d, and Anxiety Domino 33d, also by Anxiety Domino 25th and Beau Domino. Then they are out of Real Prince Domino 22d, Advance Domino 7th and Intense Domino 16th dams. Now if there is anything to breeding you have it in this offering. If it is herd building material you want you certainly have it in here. Selling 4 cows with calves at side, 14 bred heifers and the rest are open heifers. My catalog is now ready and will be sent FREE for the asking. When writing for it please mention Wallaces' Farmer and Iowa Homestead. Address

AMERICAN SHORTHORN BREEDERS' ASSN.

Room 301 Stockyards Chicago 9, Illinois

COMPLETE DISPERSAL

80 Registered Holsteins, Saturday, Dec. 1

Sale will be held under cover at the farm, 1½ miles north of Renwick, then 1 mile east. Hot lunch available at the farm all day. Sale will start at 11 A. M.

This is one of the greatest sales of production-bred Holsteins in Iowa in recent years. Entire herd averages 440 lbs. fat with a 3.8% average test. Six cows and two 2-year-olds have records over 500 lbs. fat, 2X.

The sale includes **30 cows in production**, about half recently fresh, balance springers . . . **10 springing 2-year-old heifers . . . 15 yearling heifers**, will be bred by sale day . . . **10 bulls** all of service age, including the two herd sires . . . 15 baby calves from a few days to 3 months old, excellent herd sire prospects or choice heifers for 4-H boys.

Carnation breeding predominates throughout the sale. The senior sire, **Femco Sir Inka Goldie**, is a grandson of the former world's record cow, Carnation Ormsby Butter King, 1,402 lbs. fat. His own dam has 846 lbs. fat as a 2-year-old and is a sister to "Femco Alma," the world's record 2-year-old with two records over 1,000 lbs. fat in heifer form.

This 6-year-old sire is selling along with about 40 daughters. His first 14 daughters to finish test in D.H.I.A. 2X and at 2 years old averaged 453 lbs. fat with a 3.95% fat. He is now being proved by the U. S. Dept. of Agriculture and this proving will make him one of the most outstanding living proved sires of the middlewest. Two other proven sires are being used artificially on the daughters of the senior sire; they are Carnation Ormsby Supreme, winner of the Iowa High Index award. His 7 nearest dams averaged 900 lbs. fat. The other sire, Carnation Imperial Chieftain's three nearest dams averaged 1,057 lbs. fat. Bangs certified. T.B. accredited. Every animal will be tested within 30 days of sale. Write for catalog.

Livestock News

The Aberdeen Angus sale of Francis T. Martin, at Creston, Iowa, on October 13, drew a nice crowd, and the bulls averaged $162, with the cows and heifers making an average of $179 per head. The top bull in the sale was Burline of Oakdale 2nd, consigned by Waller F. Vorheis & Sons, Shannon City, Iowa, and he went to Jerry Ford, Milo, Iowa, at $320. Enoch's Blackbird Truly, consigned by Bell Bros., Osceola, Iowa, went to Keith Walker, Macksburg, Iowa, at $300. She was the top cow in the sale. Eppy Elmo's Lass, from the E. L. Osburn herd, went to V. L. Hayes, Elliott, Iowa, at $[illegible]. Mr. Martin also sold 32 head of commercial cattle in this sale, at right good prices. Col. J. E. Halsey was the auctioneer in charge of the sale.

The Poland sale of Helgens Bros., Monona, Iowa, October 12, was most successful. The top boar, Lot 4, sold for $[illegible] to Walter Busse, Oakland, Iowa. Lot 2 went at $550 to El-Jon Farm, Rose Hill, Iowa. Lot 6 went to Everett Sheets, Ames, Iowa, at $325; Lot 9 to Geo. A. Arden, Guernsey, Iowa, at $260; Lot 54 to Howard J. Lenker, Wilton Junction, Iowa, at $255. The 36 boars averaged $[illegible]. The top gilt was Lot 11, and sold for $[illegible] to Alfred Paper, Stockton, Iowa. The 28 gilts averaged $64 each.

Around the Farm AND IN THE Feed Lot

by HOWARD MARSHALL

THANKSGIVING is just around the corner—the first peaceful observance we have had since 1941. And we've a lot to be thankful for this year. The end of the war and final victory is paramount, of course, but many farm families will be offering thanks for the safe return of their loved ones—boys and girls who've offered their all that this might be a better world. Likewise we can be thankful for a bountiful harvest, despite hardship and odds that seemed almost insurmountable. Yes, we've a lot to be thankful for. Let's not pass up the opportunity.

THE RETURN OF VETERANS to Iowa farms is posing a pretty big problem before agriculturists in this state, because less than a third of the lads who left the farms are returning to the acres after their discharge. Unless the situation is greatly improved by spring, farm labor supervisors foresee a tighter agricultural labor problem than prevailed at any time during the war. Many farmers are past due for relief from war time labor pressure, and in addition more help will be needed to replace prisoners of war, foreign labor and local town and city labor battalions. The latter group did a splendid job, but the patriotic motive will be lacking next year.

CHARACTERISTIC of our business, ever since we began manufacturing Walnut Grove, is the continued patronage users display once they try our products. In Monona county, Iowa, where the Soldier Feed Co., owned by Lee & Evenson, services our customers, Walnut Grove fits very nicely into the feeding plans of Wallace Hanson, Alvin Navrude, Geo. Welson, Melvin Olson, Wellliver Bros. and Eugene McCall, among many others in that county.

THERE'S A QUESTION in the minds of some about possibility of endangering our foreign export trade by encouraging other countries to develop their agricultural resources. But as far as China and India are concerned, it would be impossible for them to realize production above their own national needs. Their average farms are five acres and the per capita income is less than $50 annually. Both countries have vast areas of land that could produce food for home consumption, resulting in a better standard of living. Certainly, that must be improved before they could be able to buy much of anything.

IN THIS COUNTRY, we've seen our standard of living improve down through the years, and there'll likely be greater changes made in the years ahead. We've accomplished much of this as a result of our prosperity from the soil.

NEXT YEAR'S FARM program will offer about the same assistance experienced during the past crop year, but land owners will be expected to spend more of their own money in controlling erosion, applying lime and fertilizers, planting cover crops, etc. And these practices are almost vital in restoring our most important capital asset—the land.

MORE AND BETTER legume seed is a pressing need of our agriculture, especially in a time when emphasis will be placed on soil building through use of these crops. In the past few years, farmers were encouraged to increase acreages of a few legumes, but yields per acre continued to drop. Development of varieties that are hardy, high yielding and resistant to disease and insects would increase soil productivity, improve livestock health and raise the nation's nutritional standard.

IMPROVED LIVESTOCK is being raised by long-time users of our minerals in Washington and Johnson counties who've ordered Walnut Grove for the past six years from Sam Miller, Kalona, Iowa. A few farmers who have mixed our mineral with their home grown grain or used it in self-feeders the last 4 to 6 years include Vernon Bontrager, Albert Spenner, George Ropp, Dave Burder and Henry Semler.

CORN HUSKING OPERATIONS are in full swing throughout the corn belt, after a much later start than normal. Last fall, we thought we had a wet corn crop, but this year it's the wettest on record. In some areas, when cribbing normally would have been started in other years, it was literally possible to wring water from ears this year. Northeast Iowa has the wettest corn, while in the southwest section farmers seem to be the best off.

AS WE PREDICTED would happen, the sliding-scale price support for hogs will go into effect next fall. But to guard against any great increase in pork production over this year's program, the government has lowered the support price level. It's generally conceded, however, that pork prices will hold up fairly well the next two years and that hogs will continue to sell above the support figure.

MOST FARMERS and livestock men today realize the simple livestock mineral doesn't supply all the necessary mineral elements. In Crawford county, Iowa, where Walnut Grove, a complete mixture, has been used for years, many long-time customers are on our list. Among others are men like Fred Voss, Wm. Harm, Wilbur Harm, Robert Harm, Walter Harm, Wm. Claussen and Wm. Hoffineier. For four years Perry Brogden, of Denison, has handled our merchandise in this territory.

THE INFECTIOUSNESS of hog cholera is indicated in a study by scientists who have found that one-millionth of a cubic centimeter of virus can kill an unvaccinated pig. A cubic centimeter is equivalent to about 15 drops, so the smallest fraction of a drop of virus taken into the body is likely to be fatal. Also revealed is the fact infected pigs carry the most virus in their blood from the sixth to the eighth day. This is a warning cholera-sick pigs should be disposed of immediately, burning bedding and disinfecting their premises.

FEDERAL VETERINARIAINS are condemning nearly 18,000,000 pounds of pork and pork products annually because of tuberculosis evidence in the carcasses. The American Veterinary Medical Association says hogs contract the disease from old hens, which are often carriers of the avian strain. The moral, to swine raisers, is to cull out over-age hens—and, above all, keep poultry out of the hog lots.

GOOD LAND, GOOD LIVESTOCK, home grown grains and Walnut Grove minerals surely make a happy and profitable combination. At least that's what farmers think in Wright and Hancock counties in Iowa, where Henry Nuehring has represented us for nine years. On his long list of users are such men as Herman Schmidt, Gene McLaughlin, Oliver Nuehring, Ralph Larson and Hiko Barkenia. Their knowledge of Walnut Grove value is demonstrated in their continued patronage.

WASHINGTON POULTRY experts are becoming increasingly alarmed about next spring's poultry market—fearing a surplus of eggs, hens and even turkeys may make the situation worse than that of 1944. Present plans call for a reduction in laying numbers by about 10 per cent before the first of the year, along with a campaign to boost poultry consumption. Subsidized consumption will be likely in the school lunch program. There'll be more poultry channeled through foreign relief, and maybe some sort of an "egg bonus" to ordinary consumers regardless of income.

BECAUSE EVERY LAST pound of available sugar is needed for the nation's sugar bowl, food officials have found they can reclaim about 20,000 tons by processing beet molasses in what are called "Steffens Houses." These are refineries which can reclaim more sugar from molasses than ordinary plants. Normally, no effort would be made to obtain sugar this way, but the severity of the deficit prompts unusual proceedings to satisfy the American sweet tooth.

Livestock News

The Shorthorn sale of Carl L. Retzlaff & Sons and Ernest H. Retzlaff & Sons, at South Omaha, Neb., on October 31, was well attended by buyers from Iowa, Nebraska and Kansas, they sold 49 head at an average of $268 per head. Their cattle were in nice condition and the crowd was very much pleased with their offering. Their new herd bull, Imp. Millhills Starry Archer, was on exhibition at the sale, and the breeders assembled there were very much pleased with him, and the females bred to him were in strong demand. Seventeen bulls in the sale averaged $363 per head, and 32 cows and heifers averaged $250. The top of the sale was the two-year-old bull, Divide Revelation, a son of Duke of Killearn, and he went to Otto B. Uelrich, Oxford, Kan., at $1,000. Bulls selling for $200 and above were as follows: No. 2, Harry C. Stout, Clarinda, Iowa, $290; 3, J. N. & J. L. Johnson, Sidney, Iowa, $325; 4, Jack Yelken, Franklin, Neb., $325; 6, Herbert Hoeser, Dunbar, Neb., $250; 7, H. Hanka, Falls City, Neb., $235, and No. 9 at $260; 10, Mr. Anderson, Logan, Iowa, $270; 11, Raymond Elliott, Kellerton, Iowa, $260; 12, R. A. Hide, Malvern, Iowa, $315; 13, Nate Derringer, Neola, Iowa, $300; 14, Allen Roberts, $225; 15, J. L. Johnson, Murray, Neb., $300; 16, Arthur Letter, $225; 17, R. B. Glandt, Omaha, Neb., $295. The top female was No. 18, going to Russell Bloomstrom at $660. John Saunders & Son, Manilla, Iowa, took No. 19 at $110 and No. 22 at $540. Perry O. Brown & Son, Lamoni, Iowa, took No. 21 at $215, 31 at $300, 30 at $300 and 39 at $210. Geo. Struve & Son took two heifers at $251 each, and McCone Bros. took two at $235 each and another at $200. Cols. J. E. Halsey and Hamilton James were the auctioneers.

The Lewis W. Thieman Polled Shorthorn sale, at Concordia, Mo., October 30, attracted the attention of buyers from 13 states. The top bull, King of Vanities 2d, sold for $1,500 to McManus Farms, Keokuk, Iowa. Coronet Mystic Prince went at $1,025 to L. B. Fagin, Lathrop, Mo. Coronet Command sold for $1,000 to L. P. Schell, Dade City, Fla. The top female was Queen of Hearts 7th, and sold for $1,150 to Cherry Hill Farm, Reisterstown, Md. The 11 bulls averaged $657, with 58 females at $320, and the 69 lots at a general average of $371. They went to buyers in 13 states, namely, Iowa, Missouri, Illinois, Indiana, Ohio, Nebraska, Kansas, Oklahoma, Arkansas, Maryland, Nevada, Alabama and Florida. Auctioneers, J. E. Halsey and Hamilton James.

The Shorthorn sale at Abingdon, Ill., October 26, drew a large attendance. The top of the sale was Edellyn Bixoac Mercury, from Edellyn Farm, and sold at $[illegible] to V. L. Jarvis & Son, West Liberty, Iowa. Hickories Field Marshall, owned by W. A. Taylor, sold for $345 to Oscar Hultine, Geneseo, Ill. The top female, Pretty Princess 4th, from the V. L. Jarvis & Son herd, sold for $400 to Gilbert Karlel, Walcott, Iowa. Elkhorn Augusta 6th also sold for $400, to Homer Mendenhall, Springfield, Ill. Victoria Adelaide 34th and red heifer calf sold for $270 to C. E. Faulkes, Mitchellville, Iowa. The 39 females, many of them open heifers, averaged $210 each. The top 20 bulls averaged $270 and the 27 bulls in the lot $232 each. Auctioneer, J. E. Halsey.

The Poland sale of Emmert Bros., Mason City, Iowa, October 10, was one of the good sales of the year. The top was Lot 16, and sold for $1,200 to Henry Wulfkuhle, Breckenridge, Minn. Lot 14 went at $700 to Brown & Brown, Hampton, Iowa. The 28 boars by One World, all bred by Emmert Bros., averaged $206.34. The 50 head, including seven extras, averaged $161.15. The top 10 averaged $413, with the top 20 at $284. Buyers from seven states were represented. The total of the sale was $8,057.50. Emmert Bros. will make a sow sale in January.

The Polled Shorthorn sale of L. F. Boyle & Son, T. A. Collins and Cedar Hill Farm, held at Henry, Ill., November 2, was well attended. The top was Maxwalton Walkaway, the five-year-old bull, selling for $2,000 to McDonnell Farms, Yorkville, Ill. San Prairie Rose, his daughter, was top female, and went to Cherry Hill Farm, Reisterstown, Md. Graceful Lavender 3d, from the Collins herd, sold for $650 to Cherry Hill Farm. The eight bulls averaged $501, with 50 females at $336 and the 58 lots at a general average of $360. Auctioneer, J. E. Halsey.
